Fall Protection Quiz

Name: ______________________________________  Date: __________________________________

Multiple Choice (circle the correct answer):

1. A shock or energy absorbing lanyard must bring a person to a complete stop and limit deceleration distance to:
   a. Six Feet (60 inches)
   b. Four Feet (48 inches)
   c. Three and a half feet (42 inches)
   d. Seven and a half feet (90 inches)

2. A standard railing consists of a top rail, intermediate rail, and shall have a vertical height of ______ inches from the upper surface of the top rail to the walking-working surface:
   a. 16 inches
   b. 32 inches
   c. 42 inches
   d. 24 inches

3. A personal fall arrest system:
   a. Can be used at any distance from a working surface
   b. Is designed to stop a fall once it has already begun
   c. Requires an anchorage point that will support a static load of 2,000 lbs. per worker attached
   d. All of these

True or False:

4. ________ A personal fall arrest system is an example of passive fall protection.

5. ________ The basic components of a fall arrest system include the anchorage point, full-body harness (bodywear), and connector.

6. ________ An anchorage point used for fall restraint must support a static load of at least 1,000 lbs. per person attached (ANSI Z359).

7. ________ A non-certified fall-arrest anchorage point must support a static load of 5,000 lbs. per person attached.

8. ________ A body belt disperses the forces of a fall across the chest, thighs, pelvis and shoulders.

9. ________ Fall protection equipment should be inspected prior to each use. Equipment that does not pass inspection should be removed from service immediately.

10. ________ Clearance distance needs to be calculated prior to using a personal fall arrest system. Factors to consider include the height of the worker, free-fall distance, location of the anchorage point, deceleration distance, and a safety factor.
