Secure Gates Provide:

- .3 Standard Adjustable Models
- .Custom Options Available
- .Protection To Workers From Entry/Exit Falls

About Secure Gates

Secure Gates protect employees from entry and exit falls with self-closing gates ranging from 14" to 48" of adjustability. **Secure Gates** cover the largest opening distance of any self-closing swing gate on the market and are designed to mount in most applications in just minutes. **Secure Gates** can be installed using just a drill, tech screws, and a few hand tools. (No welding, cutting, or drilling during most installs!)

The smallest gate (14"-21") fits narrow ladder and platform openings. The medium gate (21"-32") fits common or standard ladder and openings. The largest gate covers 32"-42" of adjustability and fits wide or oversized openings.

In addition to these 3 models of gates, the heavy duty polymer hinge comes with a life time warranty that has internal stainless steel working parts. Our gates meet the latest OSHA rules 1910.23(a)(2) and OSHA 1910.29(b)(13)(I). This latest OSHA revision was put in place for all gates and openings to be guarded with self closing gates effective February 1st 2017.

Each gate is the standard powder coated safety yellow, but additional color options, metal choices, and other custom gate sizes are offered. There is also a 304 Stainless Steel gate, and a vertical lift gate for loading docks or special applications with small platforms.

Ultimately, **Secure Gates** create better fall protection and safer work environments for elevators, fertilizer plants, refineries, gas plants, power plants, roof tops, and more. *Stay Safe, Secure, and Compliant* with **Secure Gates**.
