

## PHARMACY ANALYTICS WEBINAR

LOCKTON BENEFIT GROUP

### **Specialty Drugs: Special Handling Required**

A robust pipeline exists for new breakthrough therapies that are set to be released this year. While news of these therapies is encouraging for the people who need them, their costs may give pause to the employers who help pay for them. Whether we're talking about a new injectable cholesterol-lowering medication (\$10,000 per patient, per year) or new medications for cystic fibrosis (\$400,000 per patient, per year), the costs have the potential to be overwhelming financially.

Lockton Benefit Company of Kansas City, Excelsior Solutions of Lockton Dunning Benefits, and Lockton Benefit Group's national Pharmacy Analytics Practice have collaborated to develop a leading-edge specialty drug predictive model.

Please join us for a complimentary webcast where we'll help you understand:

- How to use specialty drug predictive modeling to measure your potential cost exposure for new drugs in the pipeline.
- Next-generation strategies for specialty drug management.
- Whether there's any relief in sight from manufacturer competition and biosimilar drugs entering the market.

Plus, experts from Lockton's Pharmacy Analytics Practice will field your questions in real time.

**Tuesday, April 14, 2015**
