

“We view the activities within the university as a continuum and the educational experiences as a seamless encounter with knowledge, human vitality, and vision. We care desperately about the individual student who cares desperately about making sense out of his life. We want to communicate the sense that one is constantly becoming, that no one arrives, and that the university experience is being and becoming, not watching and waiting. We believe, finally, that the university should be at the cutting edge of current occurrences, a productive agent in extending the level and view of knowledge utilized in a society, and an imaginative agent in man’s continuing search for the true, the beautiful, and the good.”

Vice-Chancellor J. W. Peltason
Chancellor Daniel G. Aldrich, Jr.
