AIDS Treatment News

John S. James, editor and publisher

Working as a data analyst in the medical research field in early 1986, John recognized a need for a consistent, reliable source of information as the epidemic unfolded. He began AIDS Treatment News, determined to "search out new information on treatments, evaluate the quality of the information based on credibility and usefulness, and then report that information to the readers."

"I am a Medical Oncologist presently handling several HIV positive patients. I have seen and been impressed by your publication and would love to receive it."

- S.F., MD

"Please know, there are a lot of people in England who think very well of you for all the hard work you're putting in."

- G.B.

"I was one of those health care workers that saw AIDS unfold in 1981-82. Since then I always cared for AIDS patients and tried to gain as much knowledge as possible... You are doing a remarkable job."

- C.D., RN

Since April of 1986, AIDS Treatment News has provided over 7,500 subscribers - people with HIV, physicians and researchers - with over 500 articles and announcements.

P.O. Box 411256

  - Compound Q
  - Diclazuril
  - Persantine
  - Roxythromycin
    - 1989

for Reference ...

The complete set of back issues of *AIDS Treatment News* provide an excellent reference guide, complete with index and table of contents.

Periodically updated as new information becomes available, the back issues can be an invaluable source of information on developments in AIDS treatment research, as well as access to experimental and complementary treatments.

*AIDS Treatment News* has always been on the cutting edge of new information and, as it is updated, this information can be as pertinent today as when first published.

for Analysis ...

THREE YEARS AGO:

"A little arithmetic shows that an AIDS cure will be much more profitable in a few years than it would be now. In fact, today it would cause a big loss to the company which developed it. There is no commercial incentive to develop an AIDS cure too early.

"But in a few years, the picture will change dramatically. With cases doubling every year, we will have a ten-fold increase within four years. That's ten times the potential profit."
  - ATN #3, May 9, 1986

1989:

"... even if an AIDS 'penicillin' is developed — a dramatically successful new treatment — all bureaucratic incentives would be not to release it, but rather to conceal it for as long as possible.

"Long-term concealment of major advances in AIDS treatment may have happened already. One example is Compound Q..."
  - ATN #77, April 24, 1989
