

Most of the trouble in the world comes from people not doing what I tell them. If you look around at ~~all~~ the trouble spots, you will see that the difficulties are all caused by people who are not following my instructions. Not only are they not following them, but they haven't even asked for them, which I think is foolish on ~~o~~ their part. This may seem like a logical error, to say that troubles are caused by people <sup>who are</sup> ~~not following~~ my instructions, therefore there would be no trouble if they did follow my instructions. In symbols, it reads ~~ix~~ "The world would be in good shape (W) if people followed my advice (A)." Since not-A and not-W, therefore A and W. It really doesn't make sense, because A and not-W could happen too, although that doesn't seem likely to me personally. But that is not what is really wrong with it. What is really wrong is that not only would the world be in good shape if everybody followed my advice, but it would also be in good shape if everybody followed your advice, and that is something I would rather not face.
