Introduction

About This Directory

The Washington State Consulting Forester and Silvicultural Contractor Directory is a compilation of forestry professionals around Washington State who provide the professional services to private forest landowners. The directory includes specific information for each of the professionals, including contact information, services provided, bonding and insurance information, experience, and counties served. Inclusion in the directory is voluntary. All information is provided by the forestry professionals themselves. This directory is also available as a searchable online database at <http://forestry.wsu.edu/consultingdirectory/>.

Disclaimer

The firms or individuals listed herein are engaged in forestland related work in Washington State. Consultants and contractors working for a private landowner do not represent or speak for Washington State University. Washington State University is not responsible for nor guarantees the quality, accuracy, or cost of the services provided by any of the consultants listed below. Information presented in this directory was provided by the individual service providers and is published on an “as-is” basis. Washington State University did not verify the validity of the information provided. The information was last updated on the date listed on the front of this directory.

How to get listed in this directory

If you would like to have your firm’s information added to, removed from, or updated in this directory, please contact Kevin Zobrist, Washington State University Extension Forestry at 600 128th Street Southeast, Everett, Washington 98208, 425-357-6017, or kevin.zobrist@wsu.edu. The directory is updated twice a year. The deadlines for submitting information are May 1st for the mid-year update and November 1st for the year-end update.

About Consulting Foresters

A consulting forester provides professional forest management services to landowners. These services may include management plan writing, timber sale administration, permitting, timber

marketing, inventory and appraisal, property mapping, management advice, coordination of contractor services, and other tasks. The consultant's role is to represent the interests of the landowner. As such, it is important for landowners to discuss their goals and objectives with the consultant.

When harvesting and selling timber, some logging companies and mills can provide professional services similar to those of a consultant. However, these professionals ultimately represent the interests of the timber buyers, which creates an inherent conflict of interest when also working for the timber seller (i.e. the landowner). The advantage of a consulting forester is that she or he is independent and represents solely the landowner and thus is best able to pursue the best price for the timber and ensure that contracts protect the landowner from liability.

Consulting foresters range in expertise, experience, and approach. Consultant fees can also vary widely. Consultants may charge for their services in several different ways, such as an hourly rate or a percentage of timber sale proceeds (5 to 7% is common). Landowners should do some research to find the right forester to meet their needs. Talking to several different consultants and checking references can help landowners make the right selection. A reputable forester will be one who is liked and respected by landowners, loggers, and silvicultural contractors alike

Examples of questions a landowner might want to ask when interviewing a forester include:

- What is your education and experience in forestry?
- What type of services do you offer?
- What is your philosophy toward forest use and land stewardship?
- How do you get paid?
- How far is your office from my property and do you charge per mile?
- Are you a certified forester or a member of a forestry professional organization?

About Silvicultural Contractors

A silvicultural contractor provides the labor and equipment to perform forest management tasks such as site preparation, tree planting, vegetation control, pre-commercial thinning, slash disposal, etc. Some companies provide both forestry consulting and silvicultural contracting services. A forestry consultant may arrange the services of a silvicultural contractor on behalf of a landowner, or a landowner may hire a contractor directly. As with consultants, landowners should do some research to find the right forester to meet their needs. This may include talking to multiple

contractors, asking about credentials, checking references, and asking whether the contractor is bonded and/or carries liability insurance.

For certain reforestation and thinning activities, a contractor may be required to have a Farm Labor Contractor License. A landowner who knowingly hires an unlicensed farm labor contractor may be liable for unpaid wages, damages, workers' compensation premiums, etc. The Washington State Department of Labor and Industries maintains a list of licensed farm labor contractors that is updated monthly.

Nisqually Tree Art

Contact Information

8400 Rocky Lane Southeast
Olympia, Washington 98513

Phone: 360-459-0946
Email: [Not applicable]

Service Type

- Forestry Consultant

Business Description and Remarks

Jean Shaffer has a Bachelor's degree in wildlife conservation and 20 years experience with alternative forestry. Her approach un-hampers the ecosystem to return to old growth forest, using natural selection, which is preserving stronger dominant trees and snags and harvesting weaker member trees. Her personal forest was the first one in Washington to receive Forest Stewardship Council certification.

Services Provided

- Forest management advice
- Forest management plan writing
- Invasive species identification and control
- Non-timber forest products
- Wildlife habitat enhancement
- Other: Tree marking for harvest, hazard tree assessment

Service Type

- Forestry Consultant
- Silvicultural Contractor

Business Description and Remarks

Summitt Forests, Inc has been operating as a forestry company throughout the western US for over 30 years. Our projects involve forest health improvements such as: fuels reduction, piling, chipping, thinning, tree planting, mastication, small tree removal, slash piling, pruning, herbicide and pesticide applications along with many other types of projects.

Services Provided

- Brush/slash disposal
- Forest inventory/appraisal/timber cruising
- Invasive species identification and control
- Pre-commercial thinning
- Prescribed burning
- Reforestation/tree planting
- Site preparation – chemical
- Site preparation – mechanical
- Timber sale management/marketing
- Vegetation control/release – chemical
- Vegetation control/release – mechanical
- Wildlife damage control
- Wildlife habitat enhancement
- Other: Fuels reduction

Glossary of Terms

Forestry Service Descriptions

Brush/slash disposal

This is the removal or breaking down of large woody debris that is left behind after a natural disaster or implementation of a management practice. The disposal can take place in the form of burning, chipping, or moving it off the property for another use.

Forest inventory

This technique quantifies what you have in your forest and reveals insights into species composition, tree density, tree volume, wildlife habitat, forest health, and how the forest changes over time.

Forest management advice

Assistance in identifying the best management options that will meet the objectives of the landowner, while following the forest practice laws.

Forest management plan writing

This service uses the landowner's objectives to formulate a written plan for the current and future management of an entire forest property. The forest management plan should include the ownership objectives, property description, and the steps to achieve those objectives and protect public resources (water, wildlife, etc.) given the property's current conditions. The plan may also meet part of the eligibility requirements for third party recognition, cost share programs, and property tax reductions.

Forest practices permitting

Some management activities (harvesting timber, building or repairing forest roads or culverts, etc.) require a Forest Practices Permit issued by the Washington Department of Natural Resources, and/or other municipal permits. Permitting services include identifying and applying for all the necessary permits for a project.

Forestland security consulting

This service provides techniques on reducing trespassing, dumping, vandalism, timber theft, off-road vehicles, illegal drugs, etc. on your forest property.

GIS mapping

A Geographic Information System (GIS) is a computer system for relating data to a position on the earth's surface. Using this system, you can map the location of properties, geographic features, trees, management boundaries, inventory plots, etc.

Invasive species identification and control

Identification and removal of aggressive, non-native plant species, including noxious weeds, which cause a reduction in forest health, productivity, and native vegetation.

Non-timber forest products

These are all commodities or services that are produced in the forest such as edible berries, floral greens, mushrooms, resins, medicinal plants, and pine cones. Consultants offering this service will provide advice on cultivating, harvesting, and marketing these products.

Pre-commercial thinning

Removal of the slower-growing, weaker trees in a forest stand in order to re-allocate resources to improve the growth of the remaining trees. Trees cut in this process are too small and/or too poor in quality to sell and are usually left on the ground to rot in place.

Prescribed burning

The controlled application of fire to a landscape in order to reduce excessive vegetative and woody material, maintain habitats, add nutrients back to the soil, and stimulate plant biodiversity and regeneration. The application of fire is applied by a team of fire control experts under a specific set of weather conditions. This practice typically requires a permit.

Property surveying

An assessment of property lines, usually to determine the exact location of the property boundary and amount of land owned.

Reforestation/tree planting

Planting of trees in an area that has been harvested or otherwise does not have trees.

Riparian management and alternate plan application

Management of vegetation next to a water feature (pond, stream, wetland, etc.). An alternate plan allows landowners to deviate from the standard forest practices rules for riparian buffers if the landowner can show that the alternate plan will protect public resources as well as or better than the standard rules.

Road maintenance

Regular upkeep of forest roads to meet the requirements of forest practice rules. Maintenance can include grading, cleaning culverts, re-rocking roads, and installing water bars.

Site preparation – chemical

The process of getting an area ready for planting trees. In this process herbicides are used to reduce the shrubs and grasses that would compete with newly planted trees.

Site preparation – mechanical

The process of getting an area ready for planting trees. In this process machinery, hand pulling, and/or cutting is used to reduce the shrubs and grasses that would compete with newly planted trees.

Timber sale management/marketing

Overseeing of the process of selling trees from your property. The process includes obtaining permits, laying out the harvest boundary, identifying trees to be cut, contract writing, hiring and overseeing the loggers, marketing the trees for highest value, and managing post-logging site preparation and replanting.

Trail/boardwalk construction

Planning, layout, and construction of a foot trail or boardwalk.

Vegetation control/release – chemical

Using herbicides to remove unwanted vegetation that is heavily competing with recently planted trees. Vegetation control/release is typically done a few years after trees are planted to help them establish in a stand more quickly.

Vegetation control/release – mechanical

Using machinery, hand pulling, or cutting to remove unwanted vegetation that is heavily competing with recently planted trees. Vegetation control/release is typically done a few years after trees are planted to help them establish in a stand more quickly.

Wildlife damage control (bear, beaver, porcupine, etc.)

Advice on management techniques to decrease the damage to trees, property, and other plants as a result of wildlife activities.

Wildlife habitat enhancement

Advice on management techniques that improve habitat quality for one or more species of wildlife.

Other Service Terms

Aerial photography

Satellite images and aerial photos of the property with land and water features located and identified.

Current use property tax deductions

Advice and assistance on obtaining current use tax status (e.g. Designated Forestland or Open Space) to reduce property tax assessments.

Danger tree assessment

Assessment of how sound a tree is and the likelihood of that tree falling. Danger tree assessment is typically only necessary near homes, buildings, roads, trails, and camping sites where people would be in danger.

Earth and rock removal

The removal of soil and rocks from a given location on the property. This is typically done prior to construction.

Estate planning

Preparing for the transfer of the property and its assets after the owner's death.

Forest resource damage appraisal

Assessment of casualty losses and restoration costs due to fire, flooding, windstorms, etc.

Fuel reduction

Removal or treatment (e.g. chipping) of excessive vegetation and down woody debris to decrease the risk of damage from wildfire.

Wetland delineations

Identifies the existence, boundary, and type of a wetland.

Whole property and land appraisals

A quote of the current market value of a property.
