Soft, Warm and Medium

Before we jump into learning how to wear all of the exciting colors in your palette... it's important to understand your overall coloring and how to wear your colors in general.

Your coloring is soft, warm and medium... which means that you have low to medium contrast between your hair, skin and eyes. Your overall look is soft, warm and medium. Your ideal contrast is low to medium.

Your colors are soft, warm and medium. You will use the soft color wheel. The soft color wheel contains colors to which grey has been added to mute or soften them. The outer ring is the darkest color with black added. The second ring in is the most pure and therefore, the brightest. White is added to lighten the colors. The lighter colors are the inner rings of your color wheel.

In the Your Color Style™ system, your color type is Soft & Warm. In seasonal color, the following seasons can also wear the colors in this guide: Tinted Autumn in the 16 seasons (if the hair is more blonde) and Toned Autumn (if the hair is medium brown).

For the rest of this book, I will be breaking down your color palette into different color combinations that you can use to create amazing outfits. I’ve created a color wheel for you that only includes the colors that will look best on you. So, you’ll see gaps where I’ve removed colors. This color wheel will show you how your colors relate to each other.

Then, you'll discover 4 different types of color combinations for you to refer to. They are complementary, analogous, triad and monochromatic. With each of these color combinations, I’ve provided color inspired outfits that will help you learn how to apply these exciting color combinations into professionally styled outfits! How fun!

I highly recommend you use this color guide as a tool. When you want to change things up and you’re not sure what else you can do... refer back to your color wheel. Say you bought a pretty green sweater that's in your color palette... refer to the color combinations that have that green and be inspired to try something new! Maybe it's layering a red plaid blouse under the sweater... or wrapping a purple scarf around your neck... you’ve got lots of creative options!

And always... wear what you love!

Jen Thoden

PS. If you want feedback on your outfits and color choices, post in the private Facebook group inside the Color Style Club. Not a member yet? Go here.
The numbers around the wheel are for your reference as you look at the colors in this guide. The numbers also correspond to your Your Color Style color fan (if you have one). The outermost ring contains your darkest colors. The second ring in is your brightest colors and the colors get lighter as they reach the center. If the second ring feels too bright, it may be because your natural coloring is not as intense. If so, then simply wear the next ring in or out and keep the second ring for accents.

Each ring is identified with a letter. B is the outermost ring and then C, D, E and F.

The colors on the left are your warm colors. The colors on the right are your cool colors. You can wear all of these colors.

Gold jewelry looks great on you.

Complementary Color Combinations

Complementary color combinations are colors that are opposite each other on the color wheel. The complement to red, for example, is green.

You would typically choose this type of color combo when you want a dynamic and energized look. Pairing 2 colors that are opposite on the color wheel is not exactly a calming look.

And, as I’ve pointed out before, your color wheel has beautiful color all the way around... giving you lots of great options!

To wear a complementary color combination successfully, choose one color as your main color and accessorize with the second color.

6D Banana
6E Light Lemon Yellow
6F Icy Yellow
15B Purple
15C Bright Purple
15D Amethyst
15E Lavender
15F Lavender Blush
Triad Color Combinations

Triad color combinations use 3 colors in the shape of a triangle on the color wheel. Red, blue and yellow would be a typical triad color combo. Your clear Medium autumn wheel is slightly different from the standard color wheel, so you’ll notice that red is combined with a yellow-green and blue.

Triad color combos are a bit more complex and interesting than a complementary color combination because you’re using 3 colors. This is still a pretty dynamic color combo but not as dynamic as a complementary color combo.

To pull together a successful triad color combo, choose one color as your main color and then accessorize with the other 2 colors. An even distribution of three colors may appear a bit cloweny.

Analogous Color Combinations

An analogous color combination is a much calmer color combo compared to a complementary color combo or a triad color combo. An analogous color combo uses colors that are directly next to each other on the color wheel.

You’re going to see a lot of combinations here because your color wheel is so dense. You’ll look amazing in analogous color combos. In fact, for you, the analogous color combinations give you more “wow!” looks.

The result is a unique, polished and elegant look. Not too many people know how to pull this look off... but YOU will! You’re going to hear people say, “I never thought to put those colors together!” You’re going to look amazing.

Clothing and accessories in shades of seafoam, turquoise, and baby blue.
Monochromatic Color Combinations

A monochromatic color combination includes shades of one color. This can be a very stylish look. You would wear a monochromatic look when wanting to appear uniform, quiet and sophisticated. My personality always wants to throw in a pop of a complementary color but a monochromatic look says “I’m in control. I’m elegant. I don’t need much to look stylish.”
