◆ This guide is for the Ender 3 Series of 3D printers.
◆ Select the correct input voltage to match your local mains (220V or 110V)
◆ Because of software/hardware upgrades and model differences, new revisions may not be listed in this guide.
◆ Detailed instructions for use are available on the SD card.
Notes

1. Do not use the Printer in any way other than described herein to avoid personal injury or property damage.
2. Do not place the Printer near flammables, explosives or heat sources. It is best to place it in a well-ventilated, low-dust environment.
3. Do not expose the Printer to violent vibration or any unstable environment. This will cause poor print quality.
4. The filaments recommended by the manufacturer are preferred as to avoid clogging in the hot end and/or Printer damage.
5. Do not use any other power cable than the one supplied. Use a grounded three-prong power outlet.
6. Do not touch the nozzle or hot bed during printing. Keep hands away from machine while in use to avoid burns or personal injury.
7. Do not wear gloves or loose clothing when operating the Printer. These loose articles can become caught in moving parts and cause personal injury or Printer damage.
8. Clean off filament from the nozzle tip with the provided pliers before the nozzle cools. Do not touch the nozzle directly. This can cause personal injury.
9. Clean the Printer frequently. With the machine powered off, clean the printer body with a dry cloth to remove dust, adhered printing materials and foreign objects on guide rails. Use glass cleaner or isopropyl Alcohol to clean the print surface before every print for consistent results.
10. Children under 10 years of age should not use the Printer without supervision.
Dear consumers,

Thank you for choosing our products. For the best experience, please read the instructions before operating the Printer. Our 3D team is always ready to provide you with assistance. Please contact us via the phone number or e-mail address provided at the end when you encounter any problem with the Printer.

For a better experience in using our product, you may learn how to use the Printer in the following ways:

1. View the accompanied instructions and videos on the SD card.
2. Visit our official website at www.creality3d.cn. You will find relevant software/hardware information, contact details and operation and maintenance instructions on the website.

3. Loading Filament

1. Preheat
   Method 1
   - Press and hold the extruder lever then insert 1.75mm filament through the small hole of the extruder. Continue feeding until you see filament come out the nozzle.
   - Tip: Replacing the Filament
     Preheat the nozzle then pull out the existing filament. Next, insert the new filament.

   Method 2
4. Bed Leveling

1. Prepare → Auto Home. Wait for the nozzle to move to the left/front of the platform.

2. Prepare → Disable Steppers

3. Move the nozzle the front/left leveling screw and adjust the platform height by turning the knob underneath. Use a piece of A4 paper (standard printer paper) to assist with the adjustment, making sure that the nozzle lightly scratches the paper.

4. Complete the adjustment on all 4 corners

5. Repeat above steps 1-2 times if necessary.
5. Software Installation

1. Double click the Cura icon to install the Cura Slicing Software.

2. Start Cura from the Start Menu.

3. Select Other→Creality CR-10→Printer Name: Ender 3→Add Printer.

4. Setting→Printer→Manage Printers...

5. Change Printer Settings to (220,220,250).
6. Preparing to Print

1. Slicing
Insert SD card into computer with Reader.

2. Printing
Insert the SD card
Select “Print from SD”
Select the file to be printed

1. Open file
2. Select file
3. Open
4. Save to SD Card
7. Trouble shooting

1. Erase the SD card
2. Format the SD card
3. Replace the SD card

File name
1. Rename the file with alphabet and numbers
2. Move the model and restart the slicing
3. Restore the model with software

XYZ Stepper
1. Reconnect the cables
2. Check via the replacement method

Limit switch
1. Reconnect the cables
2. Check via the replacement method

Hot bed
1. Reconnect the cables

Thermistor
1. Reconnect the cables

Heat pipe
1. Reconnect the cables

Thermistor
1. Reconnect the cables

Slice/Timing belt
1. Restart the slicing
2. Adjust the tension of the synchronous belt

Print
1. Fasten the coupling

Spray?
1. Clean the filament
2. Replace filament

Coupling
1. Reconnect the cables
2. Check via the replacement method

Other
1. Reconnect the cables
2. Check via the replacement method

Filament
1. Reconnect the cables
2. Check via the replacement method

E stepper
1. Reconnect the cables
2. Check via the replacement method

End
1. Fasten the coupling

Slicing settings normal?
1. Reconnect the cables
2. Check via the replacement method

Other files are normally recognized?
1. Reconnect the cables
2. Check via the replacement method

File is identified?
1. Reconnect the cables
2. Check via the replacement method

Move origin?
1. Reconnect the cables
2. Check via the replacement method

Heat bed
1. Reconnect the cables
2. Check via the replacement method

Heat nozzle
1. Reconnect the cables
2. Check via the replacement method

Nozzle is heated?
1. Reconnect the cables
2. Check via the replacement method

Misalignment?
1. Reconnect the cables
2. Check via the replacement method

Spray?
1. Reconnect the cables
2. Check via the replacement method

End
