

The Elements Rider and Performance Requirements

Minimum Stage Dimensions should be 20x20. Smaller sized stages are negotiable depending on venue/audience size, etc..., but can limit the scope of the performance. Elevated stages are preferred.

4 Cordless microphones are strongly preferred. Other microphone combinations are negotiable, but the quality of the performance is often compromised when stage mobility is limited. The Elements are capable of performances of various sizes and have a very modular set list. Performances have been conducted with every combination of group members including solo, duet, trio performances, as well as blended with live bands other groups, etc... Microphone needs obviously are adjusted accordingly.

The Elements require A QUALITY PA system with on stage monitors and sound technician to assist with its operation. An AV patch should be available for DJ Hook In and digital drum machine. Also The Elements require capability for at least on instrument input including DI box. Set list can be adjusted depending on specific need to NOT require a DJ.

2-3 Speaker sound systems are also acceptable depending on scope and details of the performance/venue.

A dressing room/green room for preparations is preferred with refreshments/meal provided (i.e. snacks, sandwiches, water, soft drinks).

The amount requested for stipend is \$3500 (not including transportation, lodging, and incidentals). This amount is adjusted for modular performances that do not include all five primary members as constituted. All other aspects are negotiable including transportation, lodging, video needs depending on scope and purpose of performance.

Please contact by e-mail or phone for more specific details in relation to each performance.
