

2017 Foliar Fertilizer Soybean Trial

AgriTech Consulting, Whitewater, WI

The purpose of this trial was to evaluate a combination of Trinity + KPak and its effect on yield potential in a Wisconsin soybean production system. Trinity was applied 6/15/17 at a rate of 32 oz. /acre at the V3 soybean growth stage, followed by KPak 7/31/17 at a rate of 32 oz. /acre. The combination treatment was compared to untreated soybeans.

Crop:	Soybean
Variety:	DSR2616RR
Prev. Crop:	Corn
Soil Type:	Silty Clay loam
Irrigation:	None
Row Spacing:	15"
Planting Date:	5/12/17
Harvest Date:	10/21/17
Seed Pop:	175,000
