

2018 Cotton Fertility System Trial

Southern Ag Services, Inc. Mantee, MS

The purpose of this trial was to demonstrate the effect NZONE MAX has on yield potential in a Mississippi cotton production system. NZONE MAX was treated to urea at a rate of 2 quarts concentrate per ton of urea. 100 lb. of urea was applied per acre a 2-3 true leaf stage, the treatments included treated urea, untreated urea and a control.
