

2018 UAN Nitrogen Trial- Pre-Plant Applied Real Farm Research, Aurora NE

This trial was conducted to determine the yield potential increase when applying ContainN with 32% UAN in a central Nebraska corn production system. The treatments were applied at pre-plant and compared to untreated UAN and other competing products.

Prev. Crop:	Soybeans
Tillage Type:	Min
Irrigated:	Yes, gravity
Seed Pop:	33k (2017) 34k (2018)
Soil Type:	Silt Loam
