

2018 Canadian Durum Seed Treatment Trial Moose Jaw, Saskatchewan, Canada

The purpose of this trial was to demonstrate the effect of NutriPak when applied to Durum as a seed treatment in Saskatchewan Canada. The rate of NutriPak used on the seed was 177 ml/100 bushel of Durum seed. The site consisted of a 160 acre split field with 80 acres treated and 80 acres left untreated for comparison.

Treatment	\$Cost/acre	Protein Prem. (\$0.50)	\$Net Profit/acre
Untreated	-	-	\$228.20
NutriPak	\$1.50	+\$0.50	\$237.50
			+\$9.00

Variety:	Transcend
Soil Type:	Sandy Loam
Tillage Type:	No Till
Planting Date:	05/18
Planting Rate:	2 bu/a
Harvest Date:	09/18
Moisture:	11.4%
Irrigated:	No
Protein %:	
Untreated	16
NutriPak	17.8
