

2018 AA Nitrogen Use Efficiency Trial Alliance Ag & Grain, Kansas

The purpose of this trial was to provide efficacy data for NZONE GL applied with anhydrous ammonia in support of the SUSTAIN® program. The study design consisted of 4 nitrogen AA application rates (75 lb. + NZONE GL, 105 lb. untreated, 105 lb. + NZONE GL and 135 lb. untreated), these treatments had 4 replications. Leaf samples were also collected to determine N% in plant tissue, samples were removed from each replication V6-V10. Illustrated in the charts below are the final results.

+\$34.51
**Net Profit/Acre with
NZONE GL vs.
Untreated**
