SWATCHING FOR CUSTOMFIT

CustomFit builds patterns specifically to your choice of gauge - so the only things you need to do are keep a consistent gauge, get a good sweater fabric, and measure accurately. Here are my tips:

Step 1: Swatch to ***predict*** your gauge.

The only gauge you'll have to match is your own - so predict it well!

- **Step 1:** CO between 35 & 50 sts.
- **Step 2:** Work for at least 5" (12.5 cm).
- **Step 3:** Wash your swatch and let it dry.
- **Step 4:** Play around with it a bit. Will it make a good sweater? Do you want to wear clothes that are made out of this fabric?

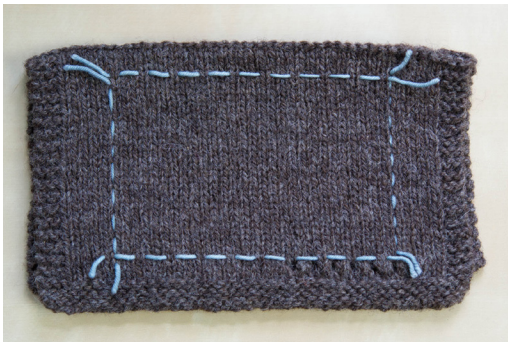
If you're satisfied, you're ready to measure! If not, swatch again.

Step 2: Measure your gauge as accurately as possible.

Measuring accurately makes a huge difference to your sweater. Here's how:

- **Step 1:** Mark off stitches and rows that are "good data". Count them.
- **Step 2:** Measure their total width and height with a ruler.

Jot down your gauge here, and you're all set to go!



gauge name:

sts _____ in _____ inches (cm)

rows _____ in _____ inches (cm)

needles used:
