

# World Class Infrastructure Management Software

AKCP Pro Server is our central monitoring and management software. Suitable for a wide range of monitoring applications. Free to use for all AKCP devices. Monitor your infrastructure, whether it be a single building, or remote sites over a wide geographic area. Integrate third party devices with, Modbus, SNMP and ONVIF compatible IP cameras.

## Monitor all your AKCP devices from a single user interface

All deployed AKCP base units and attached sensors can be configured and monitored from AKCP Pro Server (APS). Base units communicate with the server through your wired local network (LAN) or wide area network (WAN). Remote sites with no wired network send data to the server through the cellular data network\* via a VPN connection.

\* Requires base unit with cellular data 3G/4G modem

## Cross platform access

AKCP Pro Server can be accessed on your smartphone, tablet or PC. Access is operating system independent, viewable through the HTML5 user interface on any web browser\*.

There are no clients or special apps to install, making it easy to view your data on the go.

## Remote Site Management

When you have sites spread over a wide geographic area and require to monitor them from a single central office, AKCP Pro Server is the ideal choice. AKCP base units at remote sites can communicate over a wired or cellular data connection, sending data on connected sensors back to the main server. Remote monitoring of Modbus devices, generators and any SNMP compliant devices can be done through virtual sensors on APS. Mapping gives an overview of all sites, with drill down from wide area to specific sites.
