

MACQUISITION 2018 R1.2

RELEASE NOTES

May 8TH, 2018

Thank you for using BlackBag Technologies products.

The Release Notes for this version include important information about issues resolved in MacQuisition. In addition, this document contains supported versions and system requirements. While this information is complete at time of release, the information below is subject to change without notice and is provided for informational purposes only.

As always, BlackBag recommends users update to the latest version, to insure their device is functioning properly and has all available fixes.

RESOLVED ISSUES

MQ-1938 On some Mac systems instead of MacQuisition <version_number> the startup manager incorrectly displayed an EFI Boot partition

COMPATABILITY

TYPE	EARLIEST COMPATIBLE SYSTEM*	MOST RECENT COMPATIBLE SYSTEM

* Certain older 2007-2009 models that are not supported by the primary MacQuisition partition may be bootable by the MacQuisition Secondary partition. Having trouble identifying a Mac OS X system? We recommend the MacTracker App, available for free at the App Store.

LEGACY MACS

Trouble booting older Mac systems? Within each MacQuisition dongle, there is a legacy version of the software that can boot Intel-based Mac systems that predate the compatibility table above. For even older systems, including those running OS 9 (Classic), all MacQuisition customers have access to an ISO boot disk. ISO downloads are available within MacQuisition customers' individual account pages on BlackBag's website.

SUPPORT

If you need support, we are here to help.

Please use the form at <https://www.blackbagtech.com/support.html> to submit your request for support and someone from our technical support will respond.
