1. Introduction

This document contains all the essential information for the user to make full use of this A360 *HTML INPUT TO CSV PACKAGE*. It includes a description of the functions and capabilities and step-by-step procedures for setup & configuration of the *HTML INPUT TO CSV PACKAGE*.

1.1 Overview

Package converts an HTML table to a CSV file. It accepts input data in either text or HTML format. The user must specify the minimum number of columns that should be extracted from the table. If an HTML input table has several columns greater than or equal to the specified minimum number, the table will be extracted and saved to a CSV file.

1.2 Use cases

The key use cases include:

- The HTML INPUT TO CSV package allows for the conversion of HTML tables to CSV format.
- It can be used in various scenarios, including the conversion of HTML files and data containing tables to CSV format.
- The package is also helpful for converting table files received via email to CSV format.
- Overall, this package is a useful tool for anyone who needs to convert HTML tables to CSV files for further analysis or data manipulation.

2. Requirements & Prerequisites

2.1 System Requirements

Enterprise Automation 360.23+

2.2 Prerequisites

No specific prerequisites beyond the installation of A360.

3. Getting Started

3.1 Quick Start

3.1.1 Setup

Just import the Package and plug and play with your process.

3.1.2 Configuration and Use

The package contains the following command actions.

HTML Table to Csv Converter
