KD0506

KNOCK DOWN™ WASP DETERRENT NESTS

Great for hanging in locations where wasps will appear such as covered porches, under eaves, carports, trees etc.

HOW IT WORKS:

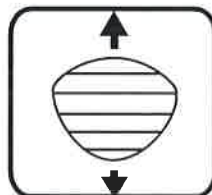

Wasps are territorial, and as such you will typically only find 1 nest within a distance of 200 feet. Wasps will flee when they encounter an unknown nest.

Easy to hang with supplied string and metal support.

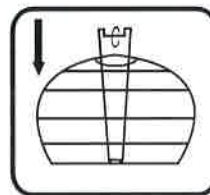

This product is not a lamp shade, do not place light or heat sources inside the nest.

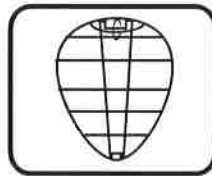

Back

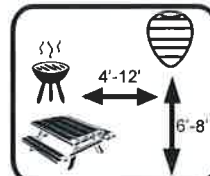

1. Remove nest from packaging, gently pull both ends of the nest to open.

2. Once opened, insert the smaller end of the metal support rod into the larger opening of the nest.

3. Snap support rod into position on the four rings. The rod should bend to keep tension. Attach the string to the "C" shaped hook in the opening.

4. Hang 4-12 feet away from eating / cooking area and 6-8 feet high
