

# BATCH CONTROL APPLICATIONS

Product Solution:

## EB11

*BATCH CONTROL*

## CHEMICAL BATCHING

Angela has a small cleaning business. She buys cleaning products in 1000L intermediate Bulk Containers and repackages them down to 5 L bottles for her staff to use on their rounds. At present she manually fills the bottles by turning the valve on the container on and off. The process is messy and wasteful, with no fine control over the filling speed.

The EB11 mounted on a OM025P and attached solenoid valve gave him a simple batch controlling system that was compact and simple to install on the container. It proved accurate and repeatable, with a single button press for Angela to fill bottles quickly with no mess.

Angela has a clean filling process where 5L of cleaning fluid is dispensed every time, with precise measurement and no spillage. She has no waste and push button operation rather than turning large valves.
