

MB45

45° General Purpose Milling Series

Durable and Versatile High Performance Milling Series

Delivers the low cutting force benefits of positive inserts and the fracture resistance benefits of negative inserts, and provides excellent surface finish

Next-generation PR18 Series PVD coating for milling drastically extends tool life

Extended lineup of inserts and grades supports a wide variety of machining applications, including steel, stainless steel, cast iron, aluminum alloys, and heat-resistant alloys

MB45

45° General Purpose Milling Series

Provides high quality and high performance machining solutions with long tool life

Delivers the low cutting force benefits of positive inserts and the fracture resistance benefits of negative inserts, and provides excellent surface finish

Extreme versatility

General-purpose milling cutters must strike a balance between quality, performance, long tool life, economy, and versatility to effectively handle a wide range of machining tasks.

The MB45 achieves all these qualities without compromise. These next-generation cutters are durable, ensuring reliability whether used for general machining applications or for discovering innovative machining solutions.

01

ISO Standard
SEKN Type
(No breaker)

02

Positive (Single-sided)
Type

Advantage

Low cutting force
Excellent finished
surface and machining
accuracy

03

Negative (Double-sided)
Type

Advantage

Excellent fracture
resistance
Economical with multiple
cutting edges

Setting new standards

04

MB45

Delivers the “low cutting force” benefits of positive inserts and the “fracture resistance” benefits of negative inserts

High Quality

High quality results and excellent surface finish

- Lineup of E class inserts
- Long arc wiper edge
- Back coolant hole

High Performance

Unique low cutting force design with fracture resistance

- Double edge structure and helical cutting edge (A.R. max + 13°)

Long Tool Life

Next-generation PVD coating for milling PR18 Series

NEW

- Double lamination technology maintains longer tool life
- Double-sided 8-edge design reduces tool costs

Solution

Find new value with excellent versatility

- Integrated tooling: Roughing and finishing with E class inserts
- For a wide variety of machining applications: Small machines (BT30, etc.) with ø40mm cutter
- For a variety of workpieces: Cost-cutting with multiple cutting edges for aluminum machining
- Enhanced Quality: Gain excellent surface finish with Cermet inserts (TN620M)

Five insert designs for various machining applications

Economical inserts with 8 cutting edges

General purpose GM insert with E-Class and M-Class options based on required machining accuracy

SM (E Class) - Low Cutting Force

Sharpness oriented with a low cutting force design
-10% cutting resistance compared to general purpose GM insert
Recommended for small machines (BT30)

GM (E/M Class) - General Purpose

1st recommendation for steel machining
Low cutting force and fracture resistance
E-Class or M-Class options

GH (M Class) - Tough Edge

Tough cutting edge and excellent fracture resistance
Obtuse edge design is resistant to chipping
Recommended for intermittent machining

**W** (E-Class) Wiper Insert

Ultra-long wiper edge (Wiper edge length approx. 8 mm)

* Double-sided 2-edge insert

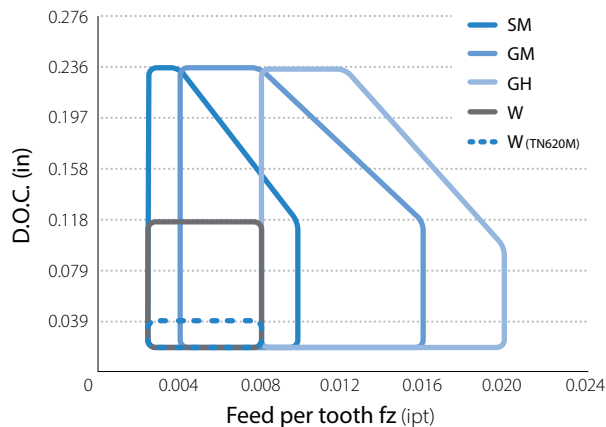

AM for Aluminum Alloys

No Land + Sharp Edge Specifications
Excellent sharpness

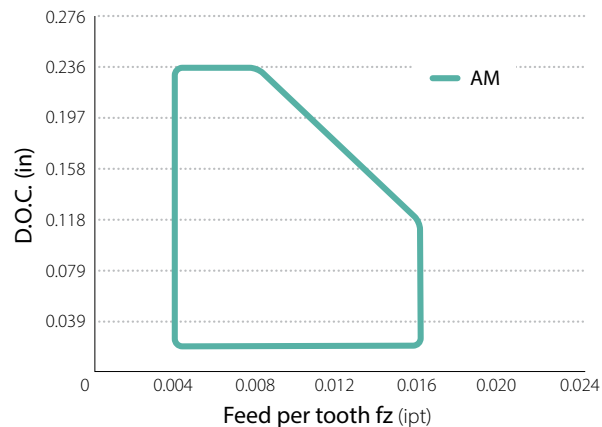

Applicable Insert Range

Steel

Aluminum alloy

When to use GM (Class E/M)

Selection by machining application

Surface roughness oriented:

GM (E-Class)

Cost-effective and surface finish oriented: GM (M-Class)

Efficiency and surface roughness oriented: W (E-Class)

Wear resistance comparison (Internal evaluation)

Cutting edge condition (after 20 min machining)

MB45(PR1825)

Competitor A

Cutting Conditions: Vc = 390 sfm, D.O.C. = 0.079", ae/DC = 80 %, fz = 0.008 ipt, Dry
Workpiece: D2, ø5.000" BT50

Solution Utilizing Cermet TN620M

Cermet (TN620M) for efficient finishing

Watch Video

Surface finish condition (Internal evaluation)

Superior surface finish

Cutting Conditions: D.O.C.= 0.020" × 3.937"
fz = 0.006 ipt, Dry
Workpiece: 1049, ø5.000" (10 flute), GM (TN620M)

3 Low cutting force design with excellent fracture resistance and superior surface finish

Low cutting force and excellent fracture resistance

Unique helical cutting edge and double-edge structure

A unique helical cutting edge

A.R. Ensures a maximum of 13° and suppresses chatter with low cutting force.

Double edge structure

Primary cutting edge generates thin chips
Reduces impact load and greatly reduces vibration when exiting the part

Cutting resistance comparison (Internal evaluation)

Cutting Conditions: $V_c = 590$ sfm, D.O.C. = 0.118", ae/DC = 80 % Center Cut, $f_z = 0.012$ ipt, Workpiece: 1049

Fracture resistance comparison (Internal evaluation) $f_z = 0.020$ ipt~0.032 ipt

Cutting Conditions: $V_c = 330$ sfm, D.O.C. \times ae = 0.079" \times 3.937" mm Center Cut, BT50 Workpiece: 4140HT $\varnothing 5.000"$ (10 flute)

Unique long arc wiper edge

Reduces variation in mounting accuracy and provides superior finished surface quality

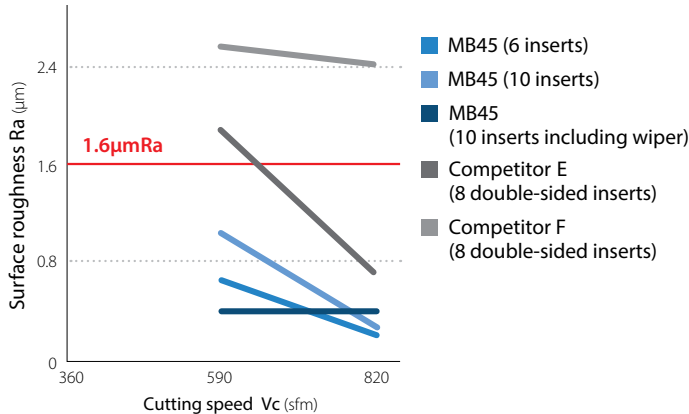

Convex curved shape with wiper edge protruding upward
*GM/SM/AM (E-Class)

Complex arc shape

Surface roughness comparison (Internal evaluation)

Cutting Conditions: D.O.C. \times ae = 0.039" \times 3.937" (Center Cut), fz = 0.008 ipt, Dry
Workpiece: 1049 ϕ 5.000" (6 flute/10 flute) GM (PR1825) BT50

Finishing surface condition (Vc = 820 sfm)

MB45 (10 inserts)

MB45 (10 inserts including wiper)

Competitor E (8 double-sided inserts)

Competitor F (8 double-sided inserts)

Proprietary long arc wiper edge provides excellent finishing surface quality

Finishing surface quality comparison (Image)

MB45

Long arc wiper edge

Smooth finished surface with small feed joints

General insert

Straight wiper edge

The feed joint is large and the finished surface is stepped.

Solution Unique back coolant structure delivers excellent finished surface

Smooth chip evacuation reduces scratches and chip clogging on finished surfaces

Reliably supplies coolant to the cutting edge and internal coolant allows for even higher quality surface finish

Unique back coolant structure

Coolant hole

Mounted closer to the cutting edge than before
Control chip outward for excellent chip evacuation to ensure to cool the cutting edge (up to ϕ 5.000").

Special grooves in the discharge port

The hole position is on the far side to prevent chip contact
Improves deterioration of chip control and evacuation

* Due to shape restrictions, some toolholders do not have grooves in the discharge port.

Fluid analysis (image)

Toolholder Lineup

Coarse pitch	Fine pitch	Extra fine pitch	End Mill
			
Recommended for workpieces or machines with low rigidity (such as sheet machining or BT30) Economical	1st recommendation Good balance of stability, machining accuracy and efficiency Supports a wide range of machining areas	Recommended for highly rigid workpiece and machine	Compatible with milling chucks (Face mill is generally recommended) *Shank size: $\phi 1.25"$ / $\phi 32\text{mm}$
Cutting diameter $\phi 2.000"$ to $\phi 5.000"$ (inch) $\phi 40\text{mm}$ to $\phi 315\text{mm}$ (metric) * $\phi 315\text{mm}$: Made to order	Cutting diameter $\phi 2.000"$ to $\phi 5.000"$ (inch) $\phi 40\text{mm}$ to $\phi 315\text{mm}$ (metric) * $\phi 315\text{mm}$: Made to order	Cutting diameter $\phi 2.000"$ to $\phi 5.000"$ (inch) $\phi 40\text{mm}$ to $\phi 250\text{mm}$ (metric)	Cutting diameter $\phi 1.500"$ to $\phi 2.500"$ (inch) $\phi 40\text{mm}$ to $\phi 80\text{mm}$ (metric)

Compatible with smaller machines

Lineup of coarse pitch $\phi 40\text{mm}$
Works well on small machines such as BT30

Recommendation for small machines:
Low cutting force SM
Cutting resistance is about 10% less than general-purpose GM

Cutting resistance comparison (Internal evaluation)

Cutting Conditions: $V_c = 490\text{ sfm}$, $D.O.C. = 0.039"$, $a_e/D_c = 80\%$, Dry, BT50 Workpiece: 1049

Case studies

Excellent performance even under unstable machining conditions

Cradle SS400

$V_c = 520\text{ sfm}$
 $D.O.C. \times a_e = 0.003" \times 5.12"$, Wet

Machining efficiency

MB45 $\phi 160\text{mm}$ 12 flute
GM(PR1825)

$V_f = 760\text{ sfm}$

$f_z = 0.008\text{ ipt}$

Competitor G $\phi 160\text{mm}$ 8 flute

$V_f = 620\text{ sfm}$

$f_z = 0.010\text{ ipt}$

Machining efficiency
1.2x

MB45 shows stable machining in an environment prone to deflection and chatter.
Increasing the number of inserts improves efficiency.
Improved joints between machining passes.

(User evaluation)

Case studies

Achieves 1.6x longer tool life under the same machining conditions

Housing 316

$V_c = 300\text{ sfm}$
 $D.O.C. = 0.079"$, $f_z = 0.007\text{ ipt}$, Dry

Number of parts

MB45 $\phi 63\text{mm}$ 5 flute
GM(PR1825)

30 pcs per corner

Competitor H $\phi 63\text{mm}$ 5 flute

18 pcs per corner

Tool life
1.6x

MB45 shows stable machining without chattering.
Wear on the cutting edge proceeds normally and shows 1.6x tool life than competitor.

The numbers in **bold font** are recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation. Machining with coolant is recommended for Ni-based heat resistant alloy and titanium alloy. When choosing wet machining for other workpieces, reduce the cutting speed to 70% or less. When machining aluminum, be sure to use within recommended conditions. Do not rotate more than the maximum speed listed on the main unit. Dry machining is recommended for cermet.

Maximum number of revolutions

Set the number of revolutions per minute within the recommended cutting speed specified by the workpiece on page 11.

Do not use the face mill or end mill at the maximum revolution or higher since the centrifugal force may cause chips and parts to scatter even under no load.

Coat anti-seize compound thinly on portion of taper and thread prior to installation.

(H) Optional coolant-thru bolt available.

How to Install Differential Screw

1. Insert the fine pitch side of the double screw into the toolholder and carefully rotate it until the screw stops.

2. To ensure that the holder and arbor are securely connected, provide a clearance of approx. 4mm between the holder and arbor before tightening the screws.

3. Rotate the screw until there is no clearance, and check the holder is attached to the arbor.

Precautions

Applications

Facing

How to mount inserts

1. Completely eliminate chips and dust from the insert mounting side.
2. Coat anti-seize compound thinly on portion of taper and thread of clamp screw prior to installation.
3. After mounting a clamp screw on the top edge of wrench, tighten the screw while keeping the insert pushed against the shim seat surface and holder surface (Fig.1).
4. Tighten the wrench in a direction parallel to the clamp screw. Recommended tightening torque ... 4.5 N·m
5. After tightening, check that there is no gap between the contact surface of the insert and the surface of the shim, or between the side surface of insert and the holder surface.

Fig.1

Defining the machining diameter (DC)

With respect to the machining diameter (DC) specified in ISO*, the numerical value of the machining diameter (Fig. 2) where the plane surface is finished depends on the insert. Please be careful.

Fig.2

Machining diameter at which the plane surface is finished (for $\phi 125\text{mm}$)

	GM	GH	SM	AM
Difference to machining diameter (DC)	-1.1	-2.0	-1.1	-1.1
Machining diameter (mm) at which the plane surface is finished	123.9	123.0	123.9	123.9
*Dimensional tolerance	0 -0.2mm			

*GH has a larger double-edge size, so the machining diameter at which the plane surface is finished is smaller than other inserts.

Precautions when machining

Precautions when machining aluminum

- Be sure to use within recommended conditions.
- Do not rotate more than the maximum speed listed on the main unit.
- *The number of revolutions listed on the holder is the maximum number of revolutions without load.

Vc (sfm)	0	1640	3280
	☆ GW25		
	★ PDL025		
	Recommended cutting speed [sfm]		
PDL025	660 ~ 1970 ~ 2950		
GW25	660 ~ 1640 ~ 2620		

Precautions for wet machining of steel

For wet machining, select PR1835 and use a cutting speed of 70% or less of the recommended condition as a guide.

Fig. 3

MB45-125R-14T10C

SCREW:SB-50110TRP WRENCH:

MAX 7,200 RPM

Rotating at maximum speed is prohibited.

Fig. 4

"Double dots" are in the diagonal pocket of "Single dot"
* For only holders with 12 or more inserts

How to use a wiper insert

1. Use when the feed amount per revolution [ipr] becomes large. The table below shows the standard feed amount per revolution and the number of wipers installed.

Feed per rotation	Number of wiper inserts	Pocket for wiper insert
$0.079 < f [\text{ipr}] \leq 0.157$	1 pc	Pocket with "Single dot" (Fig. 3)
$0.157 < f [\text{ipr}]$	2 pcs	"Single dot" and "Double dots" pockets (Figs. 3, 4) * Only holders with 12 or more inserts have "Double dots"

2. Chipbreaker recommended for use with wiper insert

	GM chipbreaker	GH chipbreaker	SM chipbreaker	AM chipbreaker
Wiper Insert	✓	Not recommended	✓	Not recommended

3. Install the wiper insert correctly as shown in Fig. 5.

* Fig. 6 shows the insert incorrectly attached to the holder.
