

CYCLOPS INSTALL GUIDE

RDL060102

INSTRUCTIONS:

1. To prevent electrical shock, disconnect transformer from electrical supply and make sure power supply is completely off before installation. Fixtures should always be installed by a licensed electrician.
2. Separate the 2-conductor **18AWG lead wires** by pulling apart the ends to the desired length. Strip about 1/2" of the insulation off the ends (see figure).
3. Pull the **main supply cable** through the **hole**, strip insulation off ends, and connect them to the **18AWG lead wires** using **UL listed wire connectors** suited for the location. Neatly return the connected wires back into the **hole** (see figure).
4. Compress the **springs** on the side of the fixture by hand and slide it up into the **2-1/4" hole**. Take caution to not release the **springs** until the **fixture** is in the **hole** and fingers are clear of the area.
5. Apply light upward pressure to the **fixture** until it is flush with the **mounting surface** and **springs** are fully seated and holding it in place.
6. To adjust light aiming, the **ball** can be swiveled around by applying sideways pressure with fingers or hand.
