Double-Wall Insulated Bins

D-Series

D460 & D660

Ideal on-board handling boxes. Low height allows less weight on bottom-loaded product, providing better product care and quality. Open corner hook area for easy-off-loading. Standard 4 corner drains allow for even drainage.

D660

D460

D660T

The two-legged version of the standard D660 model. Elimination of the centre bar underneath decreases forklift damage, increasing the lifetime of the box. Smooth walls provide a more hygienic-looking and better performing box. No daymarker options.

D1000

Used extensively in the salting and aquaculture harvesting industries. The lower profile allows for more even distribution of weight, resulting in even less damage to product than the standard 335 box. One drain and two options for lids.
