# Fermentation & Storage Tanks

## Orion™ Egg Tank

A current trend in winemaking is the egg shaped tank. Winemakers report superior fermentation results in these tanks due to the shape promoting both internal convection mixing and cap concentration.

Principally designed as a 2 ton closed fermentor, the Orion™ tank may also be used for long-term storage. As a fermentor the Orion offers a number of advantages over open bin ferments.

Tank comes standard with a VF4 bottom flange (10 hole 4" flange fitting - 4" 10 bolt fitting, 4" tri-clamp, 4" tri-clamp gasket, 4" tri-clamp blank.

The Orion has molded in recesses in the bottom of the tank that index into protrusions on the base. The Tank is molded in natural translucent white with the included Pallet Base in black. The Pallet Base has a pass-through hole on center in which the Orion can be accessed from underneath and fitted with an optional 4" or 2" cleanout.
