Three MAP Growth reports to leverage for fall restart

While classroom teachers and building leaders consistently face complex operational and instructional decisions, fall 2020 will present unique challenges due to interrupted learning. Variability in the success of distance learning will create a wide depth and breadth of academic and social-emotional needs to address as students return to the classroom. Additionally, the absence of spring 2020 assessment data leaves teachers without helpful insights to ascertain what students know and can do.

This fall, to support students at every level, educators can rely on the precision and trustworthy data provided by MAP® Growth™. The three reports detailed here can help teachers and administrators meet the immediate needs of students and make informed decisions to support a successful restart.

The Grade Report
Purpose-built for building and district-level leaders, this student achievement report allows administrators to efficiently analyze student achievement data across an entire grade.

The Grade Report provides a clear view of unfinished learning and systemic instructional gaps. With these insights, administrators can make data-informed decisions regarding curriculum and resource allocation.

The Student Profile Report
This report provides classroom teachers and instructional coaches with individual student growth and achievement trends over time, both season to season and year over year.

Especially helpful within the context of school restart is the report’s built-in goal setting tool. Teachers and students can work together to set personalized learning goals. Individual goals promote student agency and foster growth mindset, especially in independent tasks or assignments.
The Class Report

This report provides teachers a high-level view of strengths and areas where students may require additional support within a subject. Having a clear view of where students may need extra instructional time helps teachers plan with confidence.

Additionally, this report is helpful for educators interested in analyzing their student insights within the context of district and national averages. Consider classroom-level questions like:

• How many of my students are performing above the national average?

• How does my class compare to the rest of the district in math or reading?

While the needs of your school or district are unique, this fall educators are united in pursuit of a singular goal—to fully support every student returning to school, whether onsite or remotely, with the resources, instruction, and interventions they need to be successful. When paired with the professional skill and savvy of educators, the trustworthy data and precision of MAP Growth are vital to meet the demands of this moment.

Need additional support analyzing or applying data? Connect with your account manager for additional resources, including NWEA Professional Learning.

NWEA is a not-for-profit organization that supports students and educators worldwide by providing assessment solutions, insightful reports, professional learning offerings, and research services. Visit NWEA.org to find out how NWEA can partner with you to help all kids learn.
