Build a best practice plan for successful remote administration of MAP Growth

The primary goal of this session is to offer guidance to leaders for the successful administration of MAP Growth in a remote setting. Led by a team consisting of both an NWEA Technical Consultant and a Professional Learning Consultant, participants will explore considerations unique to a remote testing environment and discuss possible implications. They will learn about the NWEA best practice guidance and planning resources available that they can apply in developing a high-quality, effective remote testing plan that meets the unique needs of their district.

In this session:
+ Make connections between purpose for testing and preparation required for success
+ Identify similarities and differences between onsite and remote testing experiences
+ Consider best practice guidelines for technology as they apply to your setting
+ Create an action plan that includes the preparation, support and communication that each stakeholder group (students, proctors and families/caregivers) will need for a successful remote testing experience
