ABOUT THE JOURNAL

PUBLICATION PAGE CHARGES (Do not apply to invited authors)
After final layout for publication, each page of an article will incur a fixed charge of:
$97 per page for members of the ISCBFM
$130 per page for non-members
This charge is fully inclusive of color reproduction of all color images in print, HTML and PDF formats. It covers also
a proportion of the costs of processing and producing the article for publication.
Page charges will not apply to open access papers where the author is paying an article processing charge.

Aims and Scope
The Journal of Cerebral Blood Flow & Metabolism features timely, peer-reviewed contributions highlighting
experimental, theoretical, and clinical aspects of brain circulation, imaging and metabolism. It is truly relevant to any
physician or scientist with an interest in brain function, including neurologists, neurochemists, physiologists,
pharmacologists, anesthesiologists, neuroradiologists, neurosurgeons, neuropathologists, and neuroscientists. The
Journal of Cerebral Blood Flow & Metabolism stands at the interface between basic and clinical neurovascular research.

Frequency: Printed once a month. Advance online publication once a week.

Journal Details
Editors-in-Chief:
Ulrich Dirnagl, MD
Director, Dept. of Neurology and Experimental Neurology, Director, Center for Stroke Research Berlin, Charité
University Medicine, Campus Mitte, D-10098 Berlin, Germany
Phone: +49 30 450 560 134; Fax: +49 30 450 560 942; E-mail: ulrich.dirnagl@charite.de

Martin Lauritzen, MD
Director, Dept. of Clinical Neurophysiology, Glostrup Hospital and University of Copenhagen, DK-2600 Glostrup,
Denmark
Phone: +45 38 63 25 00; Fax: +45 38 63 39 33; E-mail: martin.lauritzen@regionh.dk

Impact Factor:
2013 impact factor 5.339*

<td><strong>Negative Results Reports</strong> are intended to provide a forum for data that did not substantiate the alternative hypothesis (i.e. a difference between the experiment groups), and/or did not produce published findings. Since the net effect of a Negative Result is to discourage repetition, the standards for acceptance will be highly demanding. Typically, Type II error considerations are mandatory.</td>
<td>Submission consists of: One-page Summary to appear in the print edition only: 500 words maximum including abstract but excluding references, tables and figures. Structure: Title page, abstract, keywords, summary text, disclosure of interests statement, reference list, list of figure legends if any, tables if any in editable format. Figures are submitted in separate image files named “summary fig X” and Full Paper, to appear online only. In preparing this manuscript follow the guidelines for Original Articles.</td>
<td>Up to 2 in total</td>
<td>Up to 10</td>

Updated 18/5/15
Preparation of Articles

Main document files must be submitted in an editable word processing format, not in pdf format.

Original Articles

Originality: A submitted manuscript must be an original contribution not previously published (except as an abstract or preliminary report), must not be under consideration for publication elsewhere, and, if accepted, must not be published elsewhere in similar form, in any language, without the consent of Nature Publishing Group. Each person listed as an author is expected to have participated in the study to a significant extent. Although the editors and referees make every effort to ensure the validity of published manuscripts, the final responsibility rests with the authors, not with JCBFM, its editors, or the publisher.

Components of original articles should be in the following order:

- Title page
- Unstructured abstract
- Five key words
- Introduction
- Materials and Methods
- Results
- Discussion
- Acknowledgements
- Author Contribution statement
- Disclosure/Conflict of Interest
- Sentence regarding supplementary information on JCBFM website, if any
- References
- Figure legends
- Tables (in editable format, either in main document or as separate main document files)
- Figures (in separate image files)

Reports of clinical trials must adhere to the registration and reporting requirements listed in the Editorial Policies.

Cover Letter: A cover letter should state that the material is original research, has not been previously published and has not been submitted for publication elsewhere while under consideration.

Author Contributions Statement: All manuscripts must include a statement of author contributions at the end of the article which lists all authors and their specific contribution(s) to the paper. No author may be left out. For more information see the section Author Contributions statements in the JCBFM Editorial Policies. In addition, if a manuscript is accepted for publication, the corresponding author must collect and provide this information and all authors' signatures in a Declaration of Contributions to Article form and send it to the editorial office (See section on Post-Acceptance).

Title Page: The title page should include (a) the complete manuscript title; (b) all authors' full names (listed as first name, middle initial, last name) and affiliations; (c) the name and postal address for correspondence, fax number, telephone number, and e-mail address; and (d) the sources of support that require acknowledgment. Please ensure that all forms of support are acknowledged, including pharmaceutical and industry support, on the cover page; e) a running headline of no more than 50 characters (including spaces) should be supplied which conveys the essential message of the paper; If authors regard it as essential to indicate that two or more co-authors are equal in status, they may be identified by an asterisk symbol with the caption ‘These authors contributed equally to this work” immediately under the address list.

Unstructured Abstract and Keywords: The abstract should be unstructured, factual and comprehensive. The use of abbreviations and acronyms should be limited and general statements (e.g. “the
significance of the results is discussed” should be avoided. Five keywords should be provided in alphabetical order below the abstract.

Materials/Subjects and Methods Section: This section should contain sufficient detail, so that all experimental procedures can be reproduced, and include references. Methods, however, that have been published in detail elsewhere should not be described in detail. Authors should provide the name of the manufacturer and their location for any specifically named medical equipment and instruments, and all drugs should be identified by their pharmaceutical names, and by their trade name if relevant. (see also Style)

Patient Anonymity, Informed Consent and Ethics:
When reporting experiments on human subjects, authors must write the proper name of the committee that approved the study and identify by proper name the ethical guidelines that governed conduct of the study (ethical standards of the responsible committee on human experimentation (institutional or regional) or of the Helsinki Declaration of 1975 (and as revised in 1983). It must be confirmed that written, informed consent was obtained from all subjects. It is the author’s responsibility to ensure that a patient anonymity is carefully protected. Authors should mask patients’ eyes and remove patients’ names from figures unless they obtain written consent from the patients and submit written consent with the manuscript.

Conducting and Reporting Animal Experiments:
The following must be provided in the Material and Methods section of all manuscripts reporting animal experiments:
1) the full proper name (NOT “local ethics committee”) of the institutional or licensing committee which approved the experimental protocols and any relevant details regarding animal welfare and drug side effects;
2) the name of the guidelines/regulations which governed how the experiments were CONDUCTED
3) a statement confirming compliance with the ARRIVE guidelines (Animal Research: Reporting in Vivo Experiments) for how to REPORT animal experiments

Availability of Data and Materials:
An inherent principle of publication is that others should be able to replicate and build upon the authors’ published claims. Therefore, a condition of publication is that authors are required to make materials, data, and associated protocols available in a publicly accessible database. Where one does not exist, the information must be made available to referees at submission and to readers promptly upon request. Any restrictions on material availability or other relevant information must be disclosed in the manuscript’s Methods section and should include details of how materials and information may be obtained. For more details see JCBFM Editorial Policy/Bioethics.

Acknowledgements: These should be brief, and should include sources of support including sponsorship (e.g. university, charity, commercial organization) and sources of material (e.g. novel drugs) not available commercially.

Conflict of Interest: Disclosure/Conflict of Interest: Authors must declare whether or not there are any competing financial interests in relation to the work described. This information must be included at the submission stage and will be published as part of the paper. Conflict of interest should be noted at the end of the article before the reference list. If you have no duality of interest to declare, this should be explicitly stated. Please see the Conflict of Interest documentation in the Editorial Policy section for detailed information.

References: References appear in the text as superscript numbers starting at one. Full references should be listed at the end of the manuscript on a separate page in numerical order corresponding to the order of citation in the text.

Example of in-text citation: “for cellular ion homeostasis.”

Appears in reference list in the following format:
Where a reference is to appear next to a number in the text, for example following an equation, chemical formula or biological acronym, the citation should be written as (ref.X) and not as super-script.

Example: “detectable levels of endogenous Bcl-2 (ref. 3), as confirmed by western blot”

Abbreviate titles of medical periodicals in accordance with the latest edition of Index Medicus. Provide the first and last page numbers for each reference. Abstracts and letters must be identified as such. Papers in press and papers submitted for publication may be included in the list of references but no citation is required for work that is not yet submitted for publication.

List all authors unless there are more than 6, in which case list the first 6 authors followed by “et al”.

The following examples demonstrate correct reference style:

Journal article, e-pub ahead of print:

Journal article:

URL/Electronic materials:

Book chapter:

Entire book:

Endnote users can obtain correct referencing with the JCBFM output style; users of Reference Manager can adapt the style format file for Gene Therapy.

Supplementary Information (SI): Authors submitting supplementary information must include the text “Supplementary information is available at the Journal of Cerebral Blood Flow & Metabolism website – www.nature.com/jcbfm” at the end of the article before the Reference List.

Supplementary information is peer-reviewed material directly relevant to the conclusion of an article that cannot be included in the printed version owing to space or format constraints. The article must be complete and self-explanatory without the SI, which is posted on the journal’s website and linked to the article but is not published in print. SI may consist of data files, graphics, movies or extensive tables.

Authors should submit supplementary information files in the FINAL format as they are not edited, typeset or changed, and will appear online exactly as submitted. Supplementary material should be uploaded if possible as one supplementary file, with legends attached to figures and tables. Movies should be uploaded in separate supplementary files. Do not place supplemental figure legends in the main document.

Accepted file formats for supplementary materials: ado, aiff, applet, asf, asp, au, avi, bmp, class, csv, do, doc, docx, dta, eps, gif, html, htmlonly, java, jpeg, js, ma, mb, midi, mlonly, mov, mp2, mp3, mp4, mpa, mpeg, nb, ole, pict, pdf, png, pps, ppt, ps, ra, ram, sgml, svg, texonly, tiff, txt, wav, wmf, wmv, xls, xlsx, xml, zip. We cannot accept TeX and LaTeX.

Updated 18/5/15
Supplementary files must be as small as possible so that they can be downloaded quickly. Images should not exceed 640 x 480 pixels. For movies we recommend 480 x 360 pixels as the maximum frame size and a frame rate of 15 frames per second. If applicable to the presentation of the information, use a 256-color palette. Please consider the use of lower specification for all of these points if the supplementary information can still be presented clearly. Our recommended maximum data rate is 150 KB/s.

**File Formats: Text, Tables and Figures:** Acceptable formats for manuscripts, tables and figures are given on the online forms. Files saved in MS Office 2007 and above are acceptable. We cannot accept Tex or LaTex.

**Text:** Use a common word-processing package (Microsoft Word*, WordPerfect). ASCII files are not accepted.

**Tables** should only be used to present essential data; they should not duplicate what is written in the text. **It is imperative that tables be in editable format such as Excel or word.** They may be provided at the end of the main document after the figure legends or as separate word or Excel files. Each table should be double-spaced on a separate sheet and numbered consecutively in the order of first citation in the text. Supply a brief title above each table, but place any explanatory matter in the legend beneath the table. Do not use internal horizontal and vertical lines.

Please save table files with extensions .xls / .xlsx / .ods / or doc or docx. Ensure that you provide a ‘flat’ file, with single values in each cell with no macros or links to other workbooks or worksheets and no calculations or functions.

**Figures** should be submitted in separate figure files in JPEG, TIFF or EPS file formats following our [Artwork Guidelines](#). They should be labelled sequentially and cited in the text. Do **not** embed figures in the text. The use of three-dimensional histograms is strongly discouraged when the addition of the third dimension gives no extra information.

**Figure Legends** should be brief, specific and be provided in a double-spaced list on a separate manuscript page titled “Titles and legends to figures” after the Reference section. This list may also be provided as a separate main document file. Use scale markers in the image for electron micrographs and indicate the type of stain used.

**If you are reusing display items:** If a table or figure has been published before, the authors must obtain written permission to reproduce the material in both print and electronic formats from the copyright owner and submit the permission with the manuscript. This follows for quotes, illustrations and other materials taken from previously published works not in the public domain. The original source should be cited in the figure caption or written below the table.

**General Rules of Style**
The American Medical Association Manual of Style (9th edition), Stedman’s Medical Dictionary (27th edition) and Merriam Webster’s Collegiate Dictionary (10th edition) should be used as standard references. Refer to drugs and therapeutic agents by their accepted generic or chemical name, and do not abbreviate them (a proprietary name may be given only with the first use of the generic name). Code numbers should be used only when a generic name is not yet available (the chemical name and a figure giving the chemical structure of the drug are required). Copyright or trade names of drugs should be capitalized and placed in parentheses after the name of the drug. At first mention of a manufacturer, the town (and state if USA) and country should be provided. Names and locations (city and state in USA; city and country outside USA) of manufacturers of drugs, supplies, or equipment cited in a manuscript are required to comply with trademark law and should be provided in parentheses. If quantitative data is reported in units other than SI, the SI equivalent should be written immediately behind the original measurement (original unit/SI unit). This applies also to body weight, mass (weight) and temperature. Statistics may be provided in either standard error or standard deviation.

**Approved formats for units of measurement**

- CBF: mL/100 g/min

Please note: authors are advised that the publisher’s style does not permit use of negative superscripts.

---

Updated 18/5/15
Journal style
As the electronic submission will provide the basic material for typesetting, it is important that papers are prepared in the general editorial style of the journal.
1. For information on labeling of figures, see the artwork guidelines: http://www.nature.com/aj/artworkguidelines.pdf
2. Do not make rules thinner than 1 pt (0.36mm)
3. Use a coarse hatching pattern rather than shading for tints in graphs
4. Color should be distinct when used as an identifying tool
5. Use SI units throughout
6. Spaces, not commas, should be used to separate thousands
7. Abbreviations should be preceded by the words for which they stand in the first instance of use
8. Text should be double spaced with a wide margin
9. At the first mention of a manufacturer, the town (state if USA) and country should be provided

Language Editing
Authors who are not native speakers of English sometimes receive negative comments from referees or editors about the language and grammar usage in their manuscripts, which can contribute to a paper being rejected. To reduce the possibility of such problems, we strongly encourage such authors to take at least one of the following steps:
• Have your manuscript reviewed for clarity by a colleague whose native language is English.
• Review the tips for technical writing here
• Use an English language editing service such as Nature Publishing Group Language Editing. An Editor will improve the English to ensure that your meaning is clear and to identify problems that require your review.

Please note that the use of a language editing service is at the author's own expense and does not guarantee that the article will be selected for peer review or accepted.

HOW TO SUBMIT

If you are ready to submit an article please proceed to the Online Submission page.

Online Submission
We only accept manuscript submission via our online manuscript submission system. Before submitting a manuscript, authors are encouraged to consult both this Guide to Authors and our Editorial Policies. If you have not already done so, please register for an account with our online manuscript system. You will be able to monitor the status of your manuscript online throughout the editorial process.

At the JCBFM online submission site you will be asked to enter:
• 5 keywords
• Names and e-mail addresses of 5 preferred reviewers including at least one member of the JCBFM editorial board
• Names, affiliations, and e-mail addresses of all co-authors
• The conflict of interest statement
• Your choice of open-access publishing or standard publishing
• Information concerning experimental ethics

Submission of Revisions
Authors submitting a revised manuscript after review are asked at the site to include a point-by-point response to reviewers' comments. Do not highlight with bold, italic or underlining. It is imperative that your response be entered as editable text into the box provided for it.
This text may in addition be uploaded as a file with embedded figures and/or tables if authors consider it necessary (File name: Author response to referees, file type: Other).
Papers revised after a decision may NOT be submitted as new manuscripts. This also applies to revisions after a reject-with-resubmission decision. Revisions submitted as new papers will be unsubmitted by the editorial office. If
you encounter difficulties submitting your revision please contact the Editorial Office.

The revised manuscript can be submitted with tracking changes or highlighted changes made in response to reviewers' comments. If the paper is accepted, these markings will be removed by the editorial office before the paper is forwarded to the publisher.

POST-ACCEPTANCE

Declaration of Contributions to Article
Once a manuscript is accepted, the corresponding author is responsible for sending a completed Declaration of Contributions to Article form to the editors. In this form, all authors must state their specific contributions to the manuscript and sign the form. Hand-written signatures are required and no author may be left out. If all authors cannot fill out and sign the same form, the corresponding author is responsible for collecting authors' forms. They must then be compiled and scanned into one pdf file, and mailed or e-mailed to the JCBFM Editorial Office. Failure to promptly return the form will delay publication.

License to Publish
Once a manuscript is accepted, the corresponding author must complete and sign a License to Publish form on behalf of all authors and return it to the editorial office. Failure to promptly return the form will delay publication. Nature Publishing Group does not require authors of original research papers to assign copyright of their published contributions. Authors grant NPG an exclusive license to publish, in return for which they can re-use their papers in their future printed work. NPG's author license page provides details of the policy.

Standard Publication
Manuscripts published under the standard method of publication will be behind a paywall, requiring readers to pay to view the article, either via their institutional or personal subscription or on a pay-per-view basis. Please click here for a copy of the standard License to Publish form.

Government employees from the United States and the UK are required to sign and submit the relevant form below:
- US Government Employee License to Publish form
- UK Government Employee License to Publish form

Open Access Publication
Authors can indicate during submission whether they wish to pay a higher article processing charge (detailed in the Costs section) for their article to be published open access. Publishing open access will mean the paper is freely accessible online immediately upon publication. By paying this charge authors are also permitted to post the final, published PDF of their article on a website, institutional repository or other free public server, immediately on publication. Authors wishing to publish open access must complete an Open Access License to Publish form and a Payment form instead of the standard License to Publish form.

Government employees from the United States the UK who wish to publish open access are required to sign and submit the relevant government open access license form below:
- US Government Employee Open Access License to Publish form
- UK Government Employee Open Access License to Publish form

Open Access articles can be published under one of three Creative Commons licenses, at the free choice of the authors. Authors should note that some funders require papers to be published under a specific license and so should check the funder mandate to ensure compliance:
1. Under the Creative Commons Attribution-Noncommercial-Share Alike 4.0 International License (CC BY-NC-SA), users are free to share (copy, distribute and transmit) and remix (adapt) the contribution under the following conditions (read full legal code):

Updated 18/5/15
• Attribution: Users must attribute the contribution in the manner specified by the author or licensor (but not in any way that suggests that they or their use of the contribution is endorsed by the author or licensor).
• Noncommercial: Users may not use this work for commercial purposes.
• Share Alike: If users alter, transform, or build upon this work, they may distribute the resulting work only under the same or similar license to this one.

2. Under the Creative Commons Attribution-Noncommercial-No Derivative Works 4.0 International License (CC BY-NC-ND), users are free to share (copy, distribute and transmit) the contribution under the following conditions (read full legal code):
   • Attribution: Users must attribute the contribution in the manner specified by the author or licensor (but not in any way that suggests that they or their use of the contribution is endorsed by the author or licensor).
   • Non-commercial: Users may not use this contribution for commercial purposes.
   • No derivative works: Users may not alter, transform, or build upon this work.

3. Under the Creative Commons Attribution 4.0 International License, users are free to share (copy, distribute and transmit) and remix (adapt) the contribution, even commercially, under the following conditions (read full legal code):
   • Attribution: Users must attribute the contribution in the manner specified by the author or licensor (but not in any way that suggests that they or their use of the contribution is endorsed by the author or licensor)

OPEN ACCESS PUBLICATION COSTS

Papers published under this license are charged a higher article processing charge as this license grants greater end user rights, including commercial reuse of the work.

The article processing charge for Open Access papers published under the Creative Commons Attribution-Noncommercial-Share Alike 4.0 Unported License and Creative Commons Attribution-Noncommercial-No Derivative Works 4.0 Unported License is $2,500 / £1,700 / €2,137 (+ VAT where applicable). For authors that are members of the ISCBFM the fee is reduced to $2,250 / £1,500 / €1,755 (+ VAT where applicable).

For authors who wish to publish under the Creative Commons Attribution 4.0 Unported License, the article processing charge is $2,700 / £1,900 / €2,300 (+ VAT where applicable). For authors that are members of the ISCBFM the fee is reduced to $2,500 / £1,600 / €1,900 (+ VAT where applicable). A premium APC is charged for this license as it grants greater end user rights including commercial reuse of the work.

Visit Nature Publishing Group’s open access funding page for information about research funders and institutions that provide funding for open access.

NPG also offers an APC support service to make it easier for NPG authors to discover and apply for open access funding. For advice on what funding is available to you and help in approaching funders and institutions, please contact us at openaccess@nature.com.

For more information about NPG’s open access publishing options and policies, please see our open access homepage.

NOTE: With regards to payment, usual credit terms are 30 days from receipt of invoice. Failure to pay your invoice within the stated credit term may result in the Open Access status of the paper being rescinded, with the paper being placed behind the paywall. You may also be subject to such penalties as restrictions on your ability to publish with Nature Publishing Group in the future, involvement of a third party debt collection agency and legal proceedings.

For further information on Open Access please see the FAQs page. Please note that editors and reviewers will be blind to your choice to ensure an impartial decision on your paper.
Open Access Waiver
Please note that Harvard University FAS, Harvard Medical School, MIT, Princeton, UCSF, California Institute of Technology (Caltech) and the Georgia Institute of Technology have enacted Open Access policies that conflict with our own. If any corresponding or contributing authors are from these institutions, you will need to provide a waiver from the institution of every affected author, which can be obtained from the institution. This waiver should be submitted at the same time as the Open Access License to Publish form.

Self-Archiving
Authors are encouraged to submit their version of the accepted, peer-reviewed manuscript to their funding body’s archive for public release six months after print publication. In addition, authors are encouraged to archive their version of the manuscript in their institution's repositories (as well as on their personal web sites), also six months after the original publication. Authors should cite the publication reference and DOI number on any deposited version, and provide a link from it to the published article on the NPG website.

This policy complements the policies of the US National Institutes of Health, the Wellcome Trust and other research funding bodies around the world. NPG recognizes the efforts of funding bodies to increase access of the research they fund, and strongly encourages authors to participate in such efforts.

Proofs
The corresponding author will receive an e-mail containing a URL linking to the proofing site. Proof corrections must be returned within 48 hours of receipt. Failure to do so may result in delayed publication. Extensive corrections cannot be made at this stage. Alterations in authorship cannot be made in the proofs without written notification from all authors. For more information see JCBFM Editorial Policies/Authorship

Offprints
Offprints may be ordered on the form accompanying the proofs. The charges are necessarily higher if orders for offprints are received after the issue has gone to press.

Advance Online Publication
All original articles and reviews are published ahead of print on Advance Online Publication. This will be the final version of the manuscript and will subsequently appear, unchanged, in print.

The Journal of Cerebral Blood Flow & Metabolism is a member of, and subscribes to the principles of, the Committee on Publication Ethics (COPE).

FURTHER INFORMATION
For inquiries related to submission requirements, please contact the JCBFM Editorial Office. For inquiries related to advertising, subscriptions, permissions, papers in production or publishing a supplement, please contact the publisher's office.
