

ComSignTrust™ Cloud

e-Sign Safely Using Cloud Services

ComSignTrust™ is an automated digital signature solution that is about securing, automating and controlling all your document production to make it more efficient and cost effective. ComSignTrust™ Cloud manages all aspects of the solution at a secured site. Your IT department will not have any additional burdens placed on them as everything is handled from the cloud.

ComSignTrust™ Cloud is SaaS solution that has been designed to allow organizations that produce many signed documents and need to allow their customers or employees to send to their customers or employees signed documents monthly. ComSignTrust™ replaces the old manual hand written process and enables signing digitally on different document formats like PDF, MS-office, HTML, XML, TIFF and more.

ComSignTrust™ Cloud has been designed to meet the needs of large organizations that produce and send to its customers thousands or millions of signed documents monthly. ComSignTrust™ replaces this old manual process. When you deploy ComSignTrust™ Cloud, the ROI starts on day one and accomplished within few months.

ComSignTrust™ Cloud Benefits

- Improve the efficiency of organizational data workflow
- Save time, cost and resources of manual tasks
- Eliminate future costs associated with document production, handling, storage and disposal
- Reap immediate savings by going paperless
- Free-up personnel to enable increased productivity
- Mitigate the risks and costs associated with human error
- Increase document security and privacy of your organization and of your consumers
- Allow multiple signatures on one documents within a few minutes
- Integrate with every PKI system like MS, Entrust, Verisign, RSA, etc.
- Operate with every SCSD (Secure Cryptographic Signature Device), Integrate with every smart card or e-token to secure keys
- Build in time stamp client to enable accurate signing time verification
- Get secure, cost-effective managed digital storage

ComsignTrust is part of the Comda Group, a market leading IT Security company for over 25 years. The group also includes Comsign, Israel's leading commercial certified authority, Comda Ltd., an IT Security Integration entity, and ComSignTrust, the digital signature software solution company.

Minimal Effort, Maximum Value

One of the many advantages of cloud computing and the SaaS model is that organizations can rapidly deploy new applications and solutions with minimal effort. The ComSignTrust™ Cloud solution fulfills all your documentation needs - production, sending and storage - automatically and hassle-free. As a fully managed solution, you don't have to deploy and administer any software or hardware to your IT infrastructure. And moreover—tailoring with your portal application is an easy task.

ComSignTrust™ manages all aspects of the solution at a secured site. Your IT department will not have any additional burdens placed on them as everything is handled from the cloud.

ComSignTrust™ Cloud Highlights

- Includes all necessary components of the solution including FIPS 140-2 L3 and PKCS#11 compliant HSM (Standalone or PCI or Network)
- Operates with every SCSD (Secure Cryptographic Signature Device), Integrates with every PKCS #11 smart card or e-token
- Web service interface to your application
- Supports PDF signatures and the general PKCS#7 format
- Delivers an ROI from deployment
- Works with any type of document format
- No need to install any hardware
- Produces an unlimited amount of signed documents
- Scales to any-sized organization

ComSignTrust™ Cloud Features

- PAdES signatures – compliant with Directive 1999/93/EC
- Supports big size files.
- Detached PKCS#7 signatures
- Centralized logging
- Visual graphics positioning in profile configuration
- Signature validation tools
- HTML to PDF internal conversion
- Remote signing
- PDF certification
- SNMP traps
- Active Directory based roles for configuring the system and accessing the keys in addition to the PIN/PAD authentication against the hardware device
- Support for secure cryptographic devices (SCSD) and software keys
- Support for native PDF, OpenXML, XML, OpenOffice signature formats
- Multipage TIFF embedded signature and validation tool.
- Audit and logging of all signing and system operations
- Signing SDK (C/C++/.NET/JAVA/WCF/REST).
- CAPI signing with SHA256/SHA512 support on all windows platforms
- PKCS#11 signing
- Digital timestamp client compliant with RFC3161 or MS.
- Authenticode
- Optional Timestamp server compliant with RFC3161
- Profile based configuration
- Ability to store signed documents in various document storage solutions: EMC Centera, Netapp, SQL, File system, and others
