

Ministry of Housing and Construction

Background

The MHC is responsible for all national Housing and Construction projects. They use and archive a lot of paper graphic plans & diagrams.

The Ministry was used to work with a scanning system that scans to microfilm archiving system.

The Challenge

The cost of scanning and microfilm archiving is relatively high. The MHC needed to cut down on costs and create efficient work procedures, contributing to the Ministry's new 'environment friendly oriented' work ethics.

The solution

The ComSignTrust Desktop solution was installed on the existing MHC's IT infrastructure and was integrated with the Ministry's scanning solution. All documents were digitally signed with Qualified Signatures, binding all of them legally for any purpose.

Results

- Efficient, timely decision and action on municipality decisions
- Dramatic reduction of related resources and costs
- Cost effective solution
- User friendly interface
- High esteem and better reputation in terms of a "Green World Policy"
- Immediate ROI
