

Case study

Israel Tax Authority

Background

Israel Tax Authority's primary role is to collect taxes based on tax filing and reports.

Reports (VAT reports for example) are filed electronically and signed with a qualified electronic signature.

The Challenge

To issue 100,000 qualified electronic signature certificates to the business sectors, including: governmental ministries, business proprietors, signatories of public companies, large and small businesses, tax consultants, accountants and bookkeepers. Provide support to the users on a daily basis.

The Solution

Integrating the ComSignTrust API with the Tax Authority applications.

Applying ComSign's qualified electronic signatures to more than 100,000 tax payers, on smart cards.

Results

- Avoidance of printing large quantities of documents
- Speed-up of reporting processes
- Verification of signer's identity
- Document and signature integrity verification
- Smooth workflow between the Business Sector and the Tax Authorities
- Green environment
