Becker Professional Education helps students study for a career in medicine. Becker's approach to the USMLE® offers tools to maximise your study time as well as potential with updated comprehensive material, expert faculty and use of innovative technology.

At Becker, we help you power your success.
About USMLE

The United States Medical Licensure Examination is a three-step exam for medical licensure in the US. It is sponsored by two non-profit organizations – The Federation of State Medical Boards (FSMB®) and The National Board of Medical Examiners (NBME®). Medical Graduates are required to pass this exam before being permitted to practice medicine in the United States.

Step 1

The Step 1 exam assesses basic science knowledge and the application of the concepts in clinical scenarios. Students are eligible to take this exam after completing 2nd year of medical school.

Step 2 is divided into two important exams:

Step 2 CK (Clinical Knowledge)

This exam assesses if medical students or graduates can apply medical knowledge and skills essential to patient care under supervision.

Step 2 CS (Clinical Skills)

This exam uses standardized patients to test medical students and graduates on their ability to gather information, perform physical examination and communication skills.

Step 3

The Step 3 exam is the final in the USMLE® series and emphasises on patient management. It assesses whether medical graduates can apply medical knowledge and understanding essential to patient care without supervision.

The Step 1 and 2CK exams can be given at Prometric Testing Centers worldwide on appointment basis. The Step 2CS and Step 3 exams have to be taken in the US.

Clinical Rotations in the US

Clinical rotations will deepen your knowledge on the specialty and give you an overview on the medical system and work culture in US hospitals. The clinical evaluations and letters of recommendations form an important component to raise your chances in US medical residency.

Becker – EduPristine offers hands-on clinical rotations/elective rotations for International Medical Graduates and medical students respectively to match your career goals. These rotations will run in ACGME accredited hospitals and will give you an opportunity to gain valuable hands-on training in your desired specialty*. The letters of recommendation from a hands-on clerkship will raise you chance in the US residency

<table>

Our Faculty

**Dr. Steven R. Daugherty – Behavioral Science**
Dr. Daugherty is the author/co-author of over 70 published papers and numerous book chapters and is Becker’s Director of Faculty and Curriculum. For the past 26 years he has worked preparing students to pass the USMLE exams.

**Dr. Lionel Raymon – Biochemistry, Pharmacology and Integrated Cases**
Dr. Raymon, PharmD, PhD, is uniquely versed in Biochemistry, Pharmacology, and Pathology and possesses a strong understanding of Microbiology, Immunology, and Pathophysiology, allowing him to synthesize basic science concepts for the USMLE Step 1 exam like no one else.

**Dr. Mary J. Ruebush – Immunology / Microbiology**
Dr. Ruebush, PhD, is one of the nation’s most experienced and acclaimed instructors in Microbiology and Immunology for USMLE Step 1 review. She has written over 22 medical publications and 16 abstracts and is Becker’s Director of Faculty Recruitment and Training.

**Dr. Philip Tisdall – Pathology**
Dr. Tisdall, MD, award-winning teacher and published author, trained at the Mayo Clinic and is a diplomate of the American Board of Pathology. He helps students understand how to correlate the basic sciences and apply them to the essential thought processes of clinical medicine.

**Dr. Jack Wilson – Anatomy**
Dr. Wilson, PhD, has spent over 15 years preparing students for the USMLE. He is well known for his ability to organize the full range of Anatomy topics and has a clear sense of how the content is presented on the USMLE Step 1.

**Dr. Kartik "Carlo" Rangaraj – Physiology**
Dr. Rangaraj, MD, has spent the past 10 years teaching students what they need to know for the USMLE. He is especially adept at explaining the physiological mechanisms that produce observed pathological conditions.
