

Dexcom G6

THE POWER TO CHANGE HOW YOU LIVE WITH DIABETES

No routine fingersticks* or scanning required

No routine fingersticks* needed for treatment decisions or insulin dosing

Easy to use

The Dexcom G6 is a small wearable you apply yourself - no one even knows you have it on

Custom alerts and alarm

Customizable high and low glucose alerts, and an Urgent Low Soon alert that can proactively warn users if they will be ≤ 3.1 mmol/L within 20 minutes

Dexcom CGM Lowers A1C^{1,3}

Proven to reduce A1C and decrease risk of hypoglycemia for people using insulin

Increases time spent in range^{1,3}

Dexcom CGM users spend more time in range than those using fingersticks

Remote data sharing[†]

Capability to share real-time glucose data with up to 10 loved ones

Reduces hypoglycemic events^{2,3}

Demonstrated to reduce the number of hypoglycemic events in people with diabetes

10-day sensor wear

New, extended 10-day sensor wear

Pediatrics

The only CGM approved for ages 2 years and up

Smart device compatibility[‡]

Compatible with iOS and Android devices for convenient glucose monitoring

Empowering people to take control of their diabetes.

WWW.DEXCOM.COM

* If your glucose alerts and readings from the G6 do not match symptoms or expectations, use a blood glucose meter to make diabetes treatment decisions.

† Internet connectivity required for data sharing. Following requires the use of the Follow App.
