System Overview
Dexcom Share remote monitoring system lets one person, the Sharer, transfer Dexcom G4 PLATINUM Continuous
Glucose Monitoring information to another person, the Follower. Dexcom Share consists of the following components: Dexcom G4 PLATINUM System, including the Dexcom G4 PLATINUM Receiver with Share, the Sharer’s smart device, and optional Apple Watch as a secondary display, the Dexcom Share2 app, the Internet, the Dexcom Follow App, the Follower’s smart device and optional Apple Watch as a secondary display. The Dexcom Share2 app can only be installed on an Apple iOS smart device. The Dexcom Follow app can be installed on both – Apple iOS smart devices and Android smart devices.

When the Sharer’s receiver has Share “On,” the receiver transfers glucose information using Bluetooth wireless technology to the Sharer’s smart device. The information then is sent to the Dexcom Share Cloud using either Wi-Fi or a cellular data plan. Lastly, the glucose information is sent from the Dexcom Share Cloud to the Follower’s smart device using Wi-Fi or the Follower’s cellular data plan. Then if using an Apple Watch, the iPhone sends the
Sharer’s sensor glucose information to the Apple Watch via Bluetooth and Wi-Fi as an optional secondary display.

Below is how Dexcom Share2 and Dexcom Follow Apps work with having the Dexcom Follower using an Apple Watch:

The Sharer, can also use an Apple Watch as a secondary display device for the Dexcom G4 PLATINUM with Share
CGM information:

Sharer’s receiver and transmitter, iPhone and Apple Watch

For Apple Watch users, it is a secondary display, meaning the Apple Watch will only work if used with an iPhone.

The Sharer must have their smart device within **Bluetooth** range of their receiver in order to send data to their Follower or the system will not work. The following diagram demonstrates how these connections work:
Changing device settings on the iPhone may affect settings on the Apple Watch.

*Must be purchased separately.

### Conditions That Affect Use

Once Sharing is established, make sure the Share settings on the receiver, Sharer’s smart device and Follower’s smart
device are not altered. Make sure the Sharer’s smart device and Follower’s smart device has enough battery power to maintain Sharing. Make sure the Sharer’s smart device has a Bluetooth and Internet connection in order to share data. Make sure the Follower’s smart device has an Internet connection in order to receive data from their Sharer. If using the Apple Watch, make sure there is a Bluetooth connection from your iPhone to your Apple Watch. Putting your smart device in airplane mode will turn off your Bluetooth and disable the ability to see sensor glucose information on the Apple Watch. Dexcom® recommends charging both the smart device and receiver with Share when Sharing. For Apple Watch users, Bluetooth and Wifi must be enabled on both the smart device and Apple Watch and the watch must be charged and on.

**Risks**

Dexcom Share is a feature of the Dexcom G4 PLATINUM Continuous Glucose Monitoring (CGM) System. The main
risks involved with using Dexcom Share are based on misunderstanding its purpose.

Remember that Dexcom Share2 is a secondary notification system, not a real-time remote monitoring system. With Dexcom Share, there are 3 distinct parts of glucose monitoring:

1. Blood glucose meter - use this to make any treatment decisions.
2. Dexcom G4 PLATINUM CGM System - use the Dexcom G4 PLATINUM CGM System to complement, but not replace, information obtained from the blood glucose meter. It detects glucose trends and tracks glucose patterns.
3. Dexcom Share2 - this is an optional add-on to the Dexcom G4 PLATINUM CGM System that can share glucose information and notifications with up to five (5) other people. Shared glucose information can add another level of awareness.
Using the wrong glucose information for treatment decisions could lead to low or high glucose. Blood glucose values from a blood glucose meter may differ from the information displayed on Dexcom Follow app. All treatment decisions should be made using a blood glucose meter, not the glucose information displayed on the Dexcom Follow app. Followers who are concerned by notifications on the Dexcom Follow app should contact the Sharer’s and remind them to check their blood glucose with a blood glucose meter before driving a car or making any treatment decisions, such as taking insulin or eating fast-acting carbohydrates.

Sharers should not rely on Followers to notify them about low or high glucose. Any problems with the receiver, smart device, Bluetooth, wireless Internet connection, mobile data connection, Dexcom Share Cloud or not being in the communication range could cause data to not be shared with the Follower. In addition, if the Delay setting is too long, the Follower might not be aware of glucose level.
changes in a reasonable time. Therefore, Dexcom Share should be used only to give a secondary level of awareness and should not be expected to always communicate and transfer sensor glucose information.

**Benefits**

Patients usually respond when their continuous glucose monitoring (CGM) systems alert them. However, experts advise that an additional CGM alert to another person may be helpful in increasing the detection of low glucose or high glucose, especially at night. Dexcom Share enables this additional awareness, even when the Sharer and Follower are not in the same place.

Dexcom Share may provide improved quality of life and greater peace of mind to patients, their caregivers and their support team by allowing the Dexcom G4 PLATINUM System alerts, alarms and trend graphs to be checked remotely.
Indications For Use
The purpose of Dexcom Share Direct Secondary Displays is to notify another person, the Follower, of the patient’s Dexcom G4 PLATINUM Continuous Glucose Monitoring System sensor glucose information. The Secondary Displays is intended for providing secondary notification of a continuous glucose monitoring system and does not replace real time continuous glucose monitoring (G4 PLATINUM System) or standard home blood glucose monitoring.

The Dexcom Share Direct Secondary Displays is not intended to modify or analyze data received from the continuous glucose monitor system. Nor is it intended to instruct, or to transmit information to the continuous glucose monitor system. The Dexcom Share Direct Secondary Displays is not intended to serve as a replacement for a primary display device for a continuous glucose monitoring system. The Dexcom Share Direct
Secondary Displays is not intended to receive information directly from the sensor or transmitter of a continuous glucose monitoring system.

**Contraindications**

Do not bring the Dexcom G4 PLATINUM Sensor, Transmitter, Receiver with Share, or smart device into a room containing medical equipment such as Magnetic Resonance Imaging (MRI), Computed Tomography (CT), or diathermy. The system has not been tested with this equipment. Exposure to these types of equipment could heat and damage the devices so that they are unable to send or receive glucose information.

**Important User Information**

Please review the indications, contraindications, warnings, precautions, cautions and other important information in the Dexcom G4 PLATINUM System User’s Guide. Dexcom Share is a feature of the Dexcom G4 PLATINUM System.
If you do not have the Dexcom G4 PLATINUM System User’s Guide, you can view it on www.dexcom.com or call 1.877.339.2664 to request a copy. Available 24 hours/7 days a week.

**Warnings**

Dosing decisions should not be made based on this device. The user should follow instructions on the continuous glucose monitoring system.

This device is not intended to replace self-monitoring practices advised by a physician.

Dexcom Share does not work alone. Dexcom Share does not replace the Dexcom G4 PLATINUM System and requires Share to be turned “On” on the Dexcom G4 PLATINUM Receiver with Share to communicate glucose information to the Follower. Dexcom Share is not compatible with any previous Dexcom CGM System or any other CGM device.
You cannot use Dexcom Share to make treatment decisions, such as how much insulin to take. Dexcom Share does not replace a blood glucose meter. Always use the values from a blood glucose meter for treatment decisions. Blood glucose values may differ from the sensor glucose information. Using the sensor glucose information for treatment decisions could lead to low or high blood glucose values.

**Precautions**
Do not use Dexcom Share as the main source of CGM glucose trend information. Use the Dexcom G4 PLATINUM Receiver as the main device to track sensor glucose information, notifications and alarms. At times, the Sharer will be unable to share data using Dexcom Share, and the Follower might miss helping the Sharer in the event of low or high blood glucose values.

Do not rely solely on the Follower to alert the Sharer of low or high glucose events or other important information. At
times, the Follower may not receive data, and the Sharer will not be notified of this fact.

When using Dexcom Share, make sure the Dexcom G4 PLATINUM Receiver with Share has Share turned “On”. If not, the Sharer will be unable to share data, and the Follower might miss helping the Sharer in the event of low or high blood glucose values. You cannot use Dexcom Share unless there is a Bluetooth connection between the receiver with Share and the Sharer’s smart device. The Bluetooth range can vary and depends on the distance and obstructions between the receiver and the smart device. If the Sharer’s smart device does not have a connection or loses the connection, the Sharer will be unable to share data, and the Follower might miss helping the Sharer in the event of low or high blood glucose values.

Do not use Dexcom Share unless both the Sharer’s and Follower’s smart devices have active Internet connections, and for Apple Watch users, active Bluetooth connection,
in order to share data. If either the Sharer or the Follower does not have a connection, loses their connection, turns off the connection (“Airplane Mode”) or if smart device is in Do Not Disturb mode (if applicable), the Sharer will be unable to share data and the Follower might miss helping the Sharer in the event of low or high blood glucose values. To check this, make sure that the Follower’s smart device can receive text messages. Follow notifications and text messages work by a similar process on a smart device or Apple Watch.

For the Apple Watch, make sure you follow the Apple guidelines to receive glucose information and notification on the watch (see Apple Watch User Guide).

Make sure the Sharer’s and Follower’s smart device or Apple Watch have charged batteries or are connected to electrical outlets. If the smart device or Apple Watch shuts down due to low battery, the patient will be unable to share data, and the Follower might miss helping the Sharer in the
event of low or high blood glucose values.

If your Apple Watch runs out of battery as a Sharer, use your iPhone and/or receiver. In addition for Apple Watch users, *Bluetooth* and Wi-Fi must be enabled on both the iPhone and Apple Watch. All smart devices must be charged and turned on.

If the Sharer’s smart device is powered off or restarted, make sure the Dexcom Share2 app is reopened after the smart device is turned back on in order to resume sharing. If the Dexcom Share2 app is not reopened, the patient will be unable to share data, and the Follower might miss helping the Sharer in the event of low or high blood glucose values.

Do not turn off system sounds in the Follower’s smart device or Apple Watch at any time that he or she wants Follow notifications to be heard. The smart device or Apple Watch settings override the Dexcom Follow app, and all notifications will be silent even if the Follower has selected
a Dexcom Follow app notification sound. If the smart device or Apple Watch is on vibrate, the Dexcom Follow app notifications will only vibrate.

Check the delay settings on the Sharer’s smart device to make sure they are not too long. The Follower will not receive notifications until after the time period in the delay has passed, and the Follower might miss helping the Sharer in the event of low or high blood glucose values if the delay is too long.

The Sharer should not choose to “Not Share” with the Follower at any time when he or she wants the Follower to get notifications. During the time the Sharer chooses to “Not Share”, the Follower will not receive notifications and might miss helping the Sharer in the event of low or high blood glucose values.

Check the Dexcom Follow app’s trend graph if the Follower’s smart device has been off or if there is no data connection (e.g., Internet/Wi-Fi or mobile data...
service/3G/4G/LTE is lost, connection is turned off in Airplane Mode, or smart device or Apple Watch if applicable, is placed in Do Not Disturb mode. When the smart device or Apple Watch is turned back on, the Follower will only receive the most recent notification and might miss helping the Sharer in the event of prior low or high blood glucose values.

Sharers and Followers should check whether their cellular service carriers support voice and data at the same time (simultaneous voice and data). If their carriers do not support simultaneous voice and data, the Dexcom Share2 app may not be able to share glucose readings and the Dexcom Follow app may not be able to receive notifications or glucose readings during phone calls. Dexcom Share will resume sharing after the phone call has ended, and the Follower will receive any waiting notifications after the phone call has ended.
Jailbroken Smart Devices
Dexcom requires Sharers and Followers to not use Dexcom Share apps on a jailbroken smart device or Apple Watch. A jailbroken smart device does not offer a reliable means to use Dexcom Share. Jailbroken smart devices present an unacceptable level of security and inaccuracy risk to the user and are not authorized to use Dexcom Share.

User Agreement
Your use of the Dexcom Share System is subject to the terms of the most current Dexcom Share End User License Agreement posted at www.dexcom.com/share2, and the Dexcom Share Privacy Policy posted at www.dexcom.com/share2, as those documents are updated from time to time according to their terms.
**Dexcom Share2 App Description**

What the Dexcom Share2 app does:

2. Display the Dexcom G4 PLATINUM Receiver’s trend graph.
3. Connects the Sharer’s smart device with their receiver with Share via Bluetooth.
4. Connects the Sharer’s smart device with their Follower’s smart device via either a Wi-Fi or mobile data connection (connect to Wi-Fi through a secured network to maintain data security).
5. Invites Followers and sends Followers setting recommendations.
6. Displays the status of the Sharer’s receiver, Sharer’s smart device, and the Dexcom Share Cloud.
7. Displays the 3, 6, 12 and 24 hour trend information
8. Connects with the optional Apple Watch companion app to show glucose trend on the Apple Watch

What the Dexcom Share2 app does not do:
1. Provide glucose notifications to the Sharer.
2. Let the Sharer know when the Follower is not receiving glucose Information.
3. Work with Android smart devices

Tips:
2. Always confirm information with a blood glucose meter before making treatment decisions.
3. Check the status screen after turning Share “On” on the receiver with Share to make sure the system is functioning properly.

**Installing the Dexcom Share2 App**

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Download the Dexcom Share2 app from the online store. See your smart device user manual for instructions.</td>
</tr>
</tbody>
</table>
Installing the Dexcom Share2 App continued

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>Launch the Dexcom Share2 app to begin Sharing!</td>
</tr>
</tbody>
</table>

For the Apple Watch, once you download the Dexcom Share2 App onto your iPhone, it will automatically be installed and visible on your Apple Watch. If it does not automatically install the Share2 app, open the Apple Watch app on your iPhone. See the Apple Watch User Guide for more details. You can move the placement of the app as needed so it is more accessible. See your Apple Watch User Guide for instructions.
## Creating a Dexcom Share Account

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Please read the terms and conditions of the license agreement. Press the “Accept” button to continue using the Dexcom Share2 app. If you decline, you will not be able to share.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Either press the “Login” button if the Sharer already has a Dexcom account or press “Sign Up” to set up a new account.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Press the “Tap to Edit” button to choose an existing photo from the Sharer’s smart device. The photo will be visible on the Follower’s display. Choosing a photo is optional.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Enter the Sharer’s name and e-mail address. This e-mail address is used to invite Followers.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Enter a username and password. E-mail addresses cannot be used as usernames.</td>
</tr>
<tr>
<td>Step 6</td>
<td>Re-enter your password for confirmation.</td>
</tr>
</tbody>
</table>
**Pairing Receiver**

Pairing connects your receiver with Share to your smart device using *Bluetooth*. Once your receiver is paired to your smart device, it can send glucose information and notifications whenever Share is turned “On.” You can pair the receiver at any time by pressing on the “Pair Receiver” button located in the account tab. NOTE: Only one smart device may be paired to a receiver at a time. If you need to pair a different smart device at a later time (for example, if you lose your smart device), please see Pairing a New Smart Device in Chapter Three.

Using Your Smart Device as a Secondary Display

WI-Fi or Cellular

Sharer’s Receiver and Smart Device with Share2 App

Bluetooth

Follower’s Smart Device with Follow App

WI-Fi or Cellular
You will not receive any CGM alerts or alarms on your smart device. **You will only receive CGM alerts and alarms from your receiver.**

Finally, know you do not have to be connected to the Internet all the time to see your sensor glucose information on your smart device.
Using Your Apple Watch as a Secondary Display

With the Dexcom Share2 app you can also display your sensor glucose information on the Apple Watch. In order to use the Apple Watch, you need to have an iPhone that is within range (approximately 15 feet) for the two devices to ‘talk to each other’ and the Share2 app needs to be turned on to view glucose trends. The Apple Watch uses Bluetooth and Wi-Fi to connect to the iPhone in order to display your sensor glucose information. On the Apple Watch you can view your 3-hour trend graph, your current sensor glucose reading and your trend arrow. If the Apple Watch is not charged, rely on your iPhone or receiver.

Sharer’s receiver and transmitter, iPhone and Apple Watch
You will not receive CGM alerts or alarms on the Apple Watch. You will only receive CGM alerts and alarms from your Dexcom G4 PLATINUM Receiver.

When you first look at your Dexcom Share or Follow CGM information on the Apple Watch, it will display the previous sensor glucose reading and trend arrow from the last time you looked at your watch. Within seconds, the
Apple Watch will update to the current sensor glucose information. Make sure you allow the watch to update before you use the CGM information as part of your diabetes management.

**Apple Health App and Dexcom Share2 App**

The Apple Health app is available on your iPhone and iPod touch. The Health app provides an easy-to-read dashboard of your health and fitness data that can be found in one place. The Dexcom Share2 app can share sensor glucose information with the Apple Health app. If you allow your Health app to access your Dexcom Share2 app, you can get your sensor glucose information integrated with all your other health and fitness data.
An important thing to note is your Health app will be updated with your Dexcom Share2 sensor glucose information every 3 hours. There is not an immediate update of your Dexcom Share2 data into the Health app.

See your Apple User Guide to learn how to use Apple Health app and allow it to access your Dexcom Share2 app.

### Inviting Followers

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Press the Followers tab to invite a Follower.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Enter the Follower’s nickname and e-mail address. Re-Enter the Follower’s e-mail address to confirm the correct address. The Follower will get a Follow Invitation e-mail at this e-mail address. Make sure the Follower can access this e-mail account from their smart device. Press the “Next” button.</td>
</tr>
</tbody>
</table>
## Inviting Followers continued

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 3</td>
<td>Choose whether or not you want the Follower to see the trend graph by pressing the on/off switch next to Allow Trend Graph View.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Choose whether or not the Follower will get low, urgent low and high glucose notifications on their smart device. Notifications are sent when the glucose level and time delay conditions are met.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Press the “Send Invitation” button to send a Follow Invitation e-mail to the Follower. Once your invitation is sent, the Sharer cannot adjust the Follower’s recommended settings.</td>
</tr>
<tr>
<td>Step 6</td>
<td>To add more Followers, press the Followers tab on the bottom of the Dexcom Share2 app screen. Then press “Invite Followers” button. You may invite a total of five (5) Followers per Dexcom Share account. When finished adding Followers, press the “Done” button.</td>
</tr>

50 • Setting up the Dexcom Share2 App
CHAPTER THREE
Using the Dexcom Share2 App
Dexcom Share Status

The Sharer can refer to the status tab to check the status of Dexcom Share. The status screen consists of a status bar, GlucoMonster character, and Status tab. All indicate whether the system is functioning correctly or not. You should check the Status tab after turning on Share on your receiver to make sure that the system is functioning properly.
Using the Dexcom Share2 App

GlucoMonster

Status bar

Status tab
**Status Tab**

The following table explains the two possible states of the Status tab:

<table>
<thead>
<tr>
<th>Status Tab</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Status Tab Image" /></td>
<td>The status tab is green and displays a Check mark icon when Dexcom Share is sending glucose information.</td>
</tr>
<tr>
<td><img src="image2" alt="Status Tab Image" /></td>
<td>The status tab is red and displays an X icon when Dexcom Share is not working. The Sharer should refer to the status bar when the system is not working.</td>
</tr>
</tbody>
</table>

When a device or connection is not working, Dexcom Share will not work. The Sharer will not be able to send their glucose levels to their Follower.
Troubleshooting Status Issues

The status bar is a useful tool for troubleshooting. It can help identify where a problem is occurring when Dexcom Share is not working. The following table provides troubleshooting tips for the following status bar displays. The status bar can indicate a component that is causing Dexcom Share to not work.

NOTE: Whether or not Dexcom Share is working and the Followers are receiving glucose notifications, you must always refer to your receiver for your glucose readings and alerts.

<table>

## GlucoMonster

The GlucoMonster is a cartoon character that displays the status of Dexcom Share. The status of the system is reflected by the GlucoMonster’s mood. The next table
explains the GlucoMonster’s two moods:

<table>
<thead>
<tr>
<th>GlucoMonster</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Check" /></td>
<td>The GlucoMonster will smile and hold up a sign with a Check mark on it if Dexcom Share is working.</td>
</tr>
<tr>
<td><img src="image" alt="X" /></td>
<td>The GlucoMonster will frown and hold up a sign with an X on it if Dexcom Share is not working. The Sharer can refer to the status bar to find where the system is not working. Press on the GlucoMonster for additional information.</td>
</tr>
</tbody>
</table>

**Follower List**
The Followers tab allows the Sharer to manage their Followers. The Sharer can either invite a new Follower, edit the nickname, e-mail address and Trend Graph visibility of a current Follower, or enable the “Not Share data” feature
With a current Follower. The following table explains the different icons and statuses that can be displayed in the Follower Dashboard:

<table>
<thead>
<tr>
<th>Icon/Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Bell]</td>
<td>Follower is set to receive notifications from their Sharer.</td>
</tr>
<tr>
<td>![Graph]</td>
<td>Follower is able to view their Sharer’s trend graph.</td>
</tr>
<tr>
<td>Removed by Follower</td>
<td>Follower removed the Sharer from the Dexcom Follow app. The Follower will not receive any of the Sharer’s glucose information, notifications or trend graph updates. The Sharer can remove the Follower from their list by pressing on the “Remove” button, found in the Follower’s notification settings.</td>
</tr>
<tr>
<td>Invitation Expired</td>
<td>Follower did not accept their Sharer’s Follow Invitation e-mail within 7 days. The Sharer can invite their Follower again by pressing on the + icon in the top right corner of the screen.</td>
</tr>
</tbody>
</table>

<td>Follower accepted the Follow Invitation e-mail and now can receive the Sharer’s glucose information.</td>
</tr>
<tr>
<td>Invited</td>
<td>Follower has been sent a Follow Invitation e-mail but has not accepted it yet.</td>
</tr>
<tr>
<td>Not Sharing</td>
<td>Sharer temporarily stopped sharing with Follower. Follower will not receive any of the Sharer’s glucose information, notifications, or trend graph updates.</td>
</tr>
</tbody>
</table>

Inviting Followers
See the Inviting Followers section in Chapter Two.

Editing Followers
The Sharer can edit a current Follower’s nickname and e-mail address by pressing on the Follower. The Sharer can also decide if the Follower can see the Sharer’s trend graph. NOTE: The Sharer cannot change any Follower
notification settings after the Follow Invitation e-mail is sent to the Follower.

**Stop Sharing with Followers**
The Sharer can press the “Stop Sharing” button, located below the Follower’s notification settings, to temporarily suspend glucose information and notifications from being sent to the Follower. Sharing is suspended until the Sharer presses the “Start Sharing” button.

For reasons of safety and intended use, the Follower will receive a message notifying them that their Sharer’s data has been set to Not Sharing. The dashboard in the Follower’s app will also notify the Follower when the Sharer has decided to stop sharing glucose information.

**Removing Followers**
The Sharer can remove a Follower by selecting a Follower and then pressing the “Remove Follower” button.
Follower will no longer receive glucose information or notifications and will be removed from the Follower list.

**Account Tab**
The Account tab allows the Sharer to edit username and e-mail address. You can also pair your receiver with Share using *Bluetooth*.

**Pairing a New Smart Device**
Only one smart device can be paired to one receiver with Share at a time. To pair to a different smart device, such as when the Sharer purchases a new smart device, follow the following directions:

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Select Share in the Settings menu on the receiver with Share.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Turn Share “On,” if it is not already “On.”</td>
</tr>
<tr>
<td>Step 3</td>
<td>Select “Forget Device.”</td>
</tr>
</tbody>
</table>

66 • Using the Dexcom Share2 App
Using the Dexcom Share2 App

**Step 4**  
Select “OK” to forget previous smart device. This action will turn Share “Off.”

**Step 5**  
Turn Share back “On.” This action readies the receiver with Share for pairing to a new device.

**Step 6**  
Finish pairing your receiver with your new smart device by opening up the Dexcom Share2 app on your new device and pressing the Pair Receiver button in the Account tab.

---

**Replacing Receiver**
If it becomes necessary to replace your receiver with Share, follow these directions after receiving the new receiver with Share:

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Go into the Bluetooth settings on the Sharer’s smart device.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Select the device named DEXCOMRX.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Press “Forget this Device” to remove the original receiver from the list of Bluetooth devices.</td>
</tr>
</tbody>
</table>
The More Tab
The More tab in the lower right corner of the Dexcom Share2 app provides extra information on Dexcom Share and the Dexcom Share2 app, such as the Safety Statement, Privacy Practices information, the System Overview, Customer Support and the Instructions for Use. The More tab also provides a link to Dexcom Share Frequently Asked Questions (FAQs) on the Dexcom website. The Sharer can also choose to e-mail a friend about Dexcom Share by pressing on the “Tell a Friend” button.
CHAPTER FOUR
Using the Dexcom Follow App
**Dexcom Follow App Description**

What the Dexcom Follow app does:
1. Allows you, the Follower to view the Sharer’s glucose information and to receive notifications.
2. Allows you, the Follower to view the Sharer’s trend graph, if the Sharer grants permission.

What the Follower app does not do:
1. Provide treatment advice.
2. Interact with the Dexcom G4 PLATINUM Receiver with Share.

**Receiving Dexcom Follow Invitation E-mail**

The Sharer must first send a Follow Invitation e-mail to the Follower from the Sharer’s Dexcom Share2 app. Once the Follower receives the Follow Invitation e-mail, please follow these steps on the Follower’s smart device:
<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Open the Follow Invitation e-mail on the Follower’s smart device.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Press the “Download App” button. The online store will automatically open and show the Dexcom Follow app description.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Press the “Install App” button.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Then go back to the Follow Invitation e-mail and press the “Start Following” button.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Please read the terms and conditions of the license agreement. Press the “Accept” button to continue using the Dexcom Follow app. If you decline, you will not be able to follow your Sharer.</td>
</tr>
<tr>
<td>Step 6</td>
<td>In the Dexcom Follow app, press the “Accept” button to accept the Follow Invitation e-mail. The Follow Invitation e-mail expires after seven days.</td>
</tr>
</tbody>
</table>
Once you have downloaded the Follow App to your smart device, you will see it on your home screen along with your other apps. Tap on the Follow App to see your Sharer’s sensor glucose readings.
For the Apple Watch, once you download the Dexcom Follow App onto your iPhone, it will automatically be installed and visible on your Apple Watch. You can move the placement of the app as needed so it is more accessible. See your Apple Watch User Guide for instructions.

In order to receive your Sharer’s sensor glucose information through your Apple Watch, make sure it is charged. If your Apple Watch is not charged, rely on your iPhone to receive your Sharer’s sensor glucose information.

**Types of Glucose Notifications**

A glucose notification is a visual message saying “Glucose notification from [Sharer’s name]” that appears on the screen of the Follower’s smart device or Apple Watch. The notification may also include a sound, depending on the settings on smart device or Apple Watch. The following table describes the different causes of notifications the Follower can choose to receive from their Sharer.
<table>
<thead>
<tr>
<th>Notification Cause</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low Notification</td>
<td>Sharer’s sensor glucose reading was at or below the Follower’s set glucose reading for the low notification. Follower will be sent a notification once the delay setting is met.</td>
</tr>
<tr>
<td>Urgent Low</td>
<td>Sharer’s sensor glucose reading was at or below the Follower’s set glucose reading for the urgent low notification. A notification is immediately sent to the Follower. There is no delay setting.</td>
</tr>
<tr>
<td>High Notification</td>
<td>Sharer’s sensor glucose reading was at or above the Follower’s set glucose reading for the high notification. Follower will be sent a notification once the delay setting is met.</td>
</tr>
</tbody>
</table>

**Changing Glucose Notifications**

The Follower can choose when low, urgent low, and high notifications are sent. Initially, the Sharer sends recommended notification settings with the Follow Invitation e-mail. The notifications of the Sharer’s glucose
information are initially based on these settings. However, the Follower may change these notification settings:

1. **Glucose level** - Glucose reading that initiates a notification to the Follower’s smart device.

2. **Delay** - Time delay between when a glucose reading condition is met and when the Follower’s smart device or Apple Watch is sent a notification if the glucose reading condition continues to be met.

3. **Sounds** - The sounds the Follower’s smart device or Apple Watch makes when receiving notifications.

4. **Repeat** - Repeats the notifications after a chosen period of time if the glucose reading conditions have not improved. This option is not available for urgent low notifications, which automatically repeat every 30 minutes.

If using the Apple Watch, notifications may appear on the watch with sound and haptic feedback (gentle tap on the wrist). The strength of the haptic feedback can be adjusted.
to desired level. In addition, if you put your hand over the Apple Watch, the notification will go silent. See the Apple Watch user guide for more information.
The Follower can edit the Follower’s notification settings by following these steps:

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Press on the Sharer’s profile in the Follow Dashboard. Next, press on the settings icon in the top right corner.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Slide the on/off switch to activate the notification.</td>
</tr>
<tr>
<td>Step 3</td>
<td>To change the glucose reading that triggers a notification, select the box with the number in it.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Choose whether or not a notification has a delay. To change the delay, select the box with the number in it.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Choose whether or not to repeat low and high notifications.</td>
</tr>
</tbody>
</table>

**Type of Status Change Notifications**

There are three status changes that cause notifications. The status change notifications notify the Follower of changes to the Sharer’s sharing status:

1. Not Sharing - Sharer decides to temporarily stop sharing.
2. Removed by Sharer - Sharer permanently removes Follower from Sharer’s follower list.

3. No More Data – This notification is sent whenever active glucose sharing is interrupted for any reason, other than the Sharer turning Share “Off” on the receiver. This notification may include events such as receiver glucose data gaps, receiver power down, or Sharer connectivity issues, including loss of Internet connection. The Follower should contact the Sharer for more information about the data interruption.

**Reviewing Glucose Notifications**

**On your Smart Device**

As a Follower, you will receive your Sharer’s glucose notifications based on your notification settings you set for each Sharer. The Follower will receive a glucose notification similar to how a text is received (see screenshots below). Swipe to unlock your smart device to see your Sharer’s glucose sensor reading, trend arrow and/or trend graph.
On the Apple Watch:
As a Follower, you will receive your Sharer’s glucose notifications based on your notification settings you set for each Sharer. The Follower will receive a glucose notification and can tap to see more information of what the glucose notification is and tap again to see your Sharer’s glucose sensor reading, trend arrow and/or trend graph.
“Sleep Screen” when hand is down.

Notification vibrates and hand is lifted (short look notification)*, Initial Glucose Notification Screen and Sharer’s name. Hold hand still and screen will switch to the “long look notification”

Long look glucose notification screen and details. Tap on Trend graph to see your Sharer’s detailed sensor glucose information.

Current trend graph, sensor glucose reading and trend arrow of Sharer.

* If hand is in motion, the short look notification screen will be seen first.

For the Apple Watch, an important reminder is your iPhone is always the primary display device for Dexcom Follow glucose notifications. If the iPhone is unlocked and in use,
the Follow glucose notifications will go to the iPhone only. If you iPhone is locked and not in use, the Dexcom Follow glucose notifications will go to the Apple Watch if it is being worn.

**On a Android Smart Device:**
As a Follower, you will receive your Sharer’s glucose notifications based on your notification settings you set for each Sharer. The Follower will receive a glucose notification similar to how a text is received (see screenshots below). Swipe to unlock your smart device to see your Sharer’s glucose sensor reading, trend arrow and/or trend graph.
82  ● Using the Dexcom Follow App
Follow Dashboard
The Follow Dashboard allows the Follower to view their Sharer’s glucose information and trend arrow. The Sharer’s picture and trend graph are also available if the Sharer enabled sharing of this information.

Dashboard screen on Smart Device:

How long ago the Sharer’s glucose value and trend arrow were last updated

2m ago
122 mg/dL
Anthony

Sharer’s Picture
Sharer’s Glucose Reading and Trend Arrow

Dashboard Screen on Apple Watch does not display the picture of the Sharer:
**Sharer Statuses**

There are instances when a Sharer’s glucose information will not be available to their Follower. The Follow Dashboard will display the status of the Sharer.

<table>
<thead>
<tr>
<th>Sharer Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Removed by Sharer</td>
<td>Follower was removed from the Sharer’s follower list. They will not receive any of the Sharer’s glucose information, notifications, or trend graph updates.</td>
</tr>
<tr>
<td>Active</td>
<td>Sharer is using the Dexcom Share System. The Follower can receive the Sharer’s glucose information, notifications and trend graph updates (if granted permission by the Sharer).</td>
</tr>
<tr>
<td>Status</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Active - NO DATA</td>
<td>Sharer is using the Dexcom Share System but there is something preventing glucose information, notifications and trend graph updates from reaching the Follower. This may indicate a problem with the Dexcom Share System, which includes your connection to the Internet. The message, NO DATA, will appear in the Sharer’s profile.</td>
</tr>
<tr>
<td>Disconnected</td>
<td>Sharer turned the Dexcom Share feature off. The Follower will not receive glucose information, notifications or trend graph updates.</td>
</tr>
<tr>
<td>Not Sharing</td>
<td>Sharer temporarily stopped sharing with the Follower. The Follower will not receive any of their Sharer's glucose information, notifications or trend graph updates. Sharer can choose to start sharing again at any time.</td>
</tr>
</tbody>
</table>
Sharer Trend Graph
The Follower can access their Sharer’s trend graph and notification settings by pressing on their Sharer’s profile on the Follow Dashboard. The Follower can only view the Sharer’s trend graph if granted access to it by the Sharer.

The following diagram and table explain the trend graph on your smart device and its components.

The Follower can view the Sharer’s glucose trend graph over a 3, 6, 12 and 24 hour time period.
Using the Dexcom Follow App

- **Home Icon**
- **Sharer’s Name**
- **Notification Settings**

**Time Duration** Setting of 3, 6, 12 or 24 hours

**Time Since Last Glucose Value**

**Sharer’s Glucose Reading and Trend Arrow**

**Glucose Range** (between high and low alerts)

**Trend Graph**
To get back to the Dashboard Screen, tap on the Home icon in the upper left corner of the screen.

The following diagram and table explain the trend graph on the Apple Watch and its components.

For the Apple Watch, the Follower will only show the 3-hour trend graph.
A Follower can follow up to 5 Dexcom Sharer’s sensor glucose information. If the Follower follows more than one Sharer, the Follower’s screen will look like below for the iOS or Android smart devices and Apple Watch (Dashboard Screen):
Tap on the arrow on the right on the iPhone or the name on the Apple Watch of the Sharer’s information you want to view their trend graph and more detailed sensor glucose information. Scroll down to view all 5 Followers. To get back to the Dashboard Screen, swipe back (left to right).

You can have different settings for each Follower, but your ability to view the Sharer’s trend graph or only their sensor glucose value and trend arrow is a setting defined by the Sharer.

**Trend Graph Components**

<table>
<thead>
<tr>
<th>Trend Graph Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time Duration Setting</td>
<td>Allows the Follower to choose the time duration of the Sharer’s trend graph. The Follower can change the time duration by pressing on the “3HR,” ”6HR,” “12HR,” or “24HR” buttons.</td>
</tr>
<tr>
<td>Trend Graph</td>
<td>Displays the pattern of the Sharer’s glucose information.</td>
</tr>
</tbody>
</table>

<td>Arrows that designate the speed and direction of sensor glucose change.</td>
</tr>
</tbody>
</table>
Additional Screen Views with the Apple Watch

For the Apple Watch, the Follower can also get an “at-a-glance” view of their Sharer’s sensor glucose value and rate of change arrow.

When the Follower’s arm is raised, the “Sleep Screen” switches to the clock view initially.
Using the Dexcom Follow App

Swipe up to get to the “At-a Glance” view of your 1-5 Sharers (this graphic shows 2 Sharers). Note, you may need to swipe left to find the Dexcom “At-a Glance” screen.

Finding Out More

The Follower can find out more about Dexcom Share and the Dexcom Follow app by pressing the information icon, on the top-left corner of the Follow Dashboard screen.

The Follower can access the Safety Statement, Privacy Practices information, the Product Tour, Instructions for Use, Customer Support and Frequently Asked Questions (FAQs). Also, the Follower can e-mail a friend about Dexcom Share by pressing the “Tell a Friend” button.
CHAPTER FIVE
Troubleshooting, Warranty and Customer Support

Troubleshooting, Warranty and Customer Support • 95

<tr>
<td>Step 3</td>
<td>Once the e-mail is received, open it on the same smart device that has the Dexcom Share2 app. The e-mail will show the username(s) linked to the e-mail address. Press on the username to log in.</td>
</tr>
</tbody>
</table>
**Forgot Password** - Follow these steps if you forgot your password.

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Press the Forgot Password link in the Login screen.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Enter the Sharer’s username and press the “Submit” button. An e-mail containing the password will be sent to the e-mail address used to set up their Dexcom account.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Once the e-mail is received, open it on the same smart device that has the Dexcom Share2 app. Press the “Reset Password” button.</td>
</tr>
</tbody>
</table>

**Do I have a Dexcom account?**

In the Dexcom Share2 app, press the Forgot Username link on the login screen. Provide your e-mail address. If you have a Dexcom Store or Dexcom Share account, you will receive an e-mail that contains your username at the provided e-mail.
Receiver Troubleshooting

Why doesn’t my receiver’s trend screen show a Bluetooth icon?

- The receiver with Share is unable to communicate with the Dexcom Share2 app on the Sharer’s smart device.
- Make sure Share is “On” in the receiver Settings.
- Make sure the receiver with Share and the Sharer’s smart device are within 15 ft of each other.
- On the Sharer’s smart device, open the Dexcom Share2 app.
- Make sure the receiver with Share is paired to the Sharer’s smart device, by following the directions in Chapter Two, Pairing Receiver.

I tried to re-pair my smart device with the receiver. Why can’t my Dexcom Share2 app find my receiver?

- Make sure your receiver with Share is powered on, and Share is turned “On” in the Settings.
- Make sure the Bluetooth icon on the trend screen is
blinking. If it is not blinking, go to Share settings on the receiver and select “Forget Device”.
- On your smart device, make sure Bluetooth is on.
- On your smart device, delete any DEXCOMRX devices in your Bluetooth devices list.
- Make sure you correctly entered your receiver serial number (see Installing the Dexcom Share2 App).

**Why is my receiver’s Bluetooth icon blinking?**
- Your receiver is trying to pair with your smart device. It will continue trying until it times out or until you successfully pair the receiver.

**I was sharing data but I lost my Bluetooth connection. How can I reconnect?**
- Your Bluetooth connection may be lost due to a disturbance in communication between your receiver and your smart device. Try to reconnect by opening the Dexcom Share2 app and checking the Status screen. If the status is not yet green, ensure the phone and receiver
are in range, tap the GlucoMonster and follow any help instructions on the app, then wait up to 5 minutes for the GlucoMonster status to turn green. If you are unable to reconnect, call Customer Support at 1.877.339.2664 24 hours a day/7 days a week.

If I am replacing the receiver, do I have to set up my Followers again?
- You do not have to set up your Followers again if you replace your receiver.
- You do have to pair the new receiver with your smart device. Select “Pair Receiver” in the Account tab.

If I am replacing my smart device, what do I do?
- You will need to install the Dexcom Share2 app on your smart device and follow the setup wizard. Go to Share settings on the receiver and select “Forget Device.” Then open the Dexcom Share2 app, log in using your account you already created and follow the instructions to pair to your new receiver. The Dexcom Share2 app on your new
smart device will recover your Follower information from the smart device you are replacing.

**Apple Watch Troubleshooting**

**How do I pair my Apple Watch and iPhone?**
- Pairing is done through the Apple Watch App. See your Apple Watch user guide for details on how to pair your devices.

**Why is my iPhone displaying a glucose reading but my Apple Watch is not?**
- Check to see if your iPhone and Apple Watch are within range to receive signal.
- Make sure your Apple Watch battery is charged.
- Make sure Bluetooth and Wifi are enabled on both the iPhone and Apple Watch.

**Why is my iPhone and Apple Watch displaying two different glucose readings?**
- Sometimes here can be a brief delay in displaying the current glucose reading between smart devices.

**Sharing Checklist**

Follow these requirements to share:

1. Make sure your smart device is compatible with the Dexcom Share2 app. To see a list of supported smart devices and Apple Operating System (iOS) versions, go to the following link: http://www.dexcom.com/share2-compatibility

2. The Dexcom Share2 app is open or running in the background.

3. Sharer’s smart device has an active Internet connection, either Wi-Fi, 3G, 4G, or LTE. The Sharer can check to see if the Internet connection is working by trying to open a web page on the Sharer’s smart device.

4. Sharer’s smart device has Airplane Mode turned off.

5. Sharer’s smart device sound is on in order to hear notifications.
6. Sharer’s smart device is sufficiently charged or charging.
7. Sharer’s smart device is within 15 feet of the receiver.
8. Sharer’s smart device has 35MB of available memory.
9. Refer to the smart device user manual for further instructions.

Tips:
2. Always confirm information with a blood glucose meter before you make treatment decisions.
3. Do not disable alerts on your receiver when using Dexcom Share.

Dexcom Follow App Troubleshooting
When the Dexcom Follow app is not working, the Dashboard screen will notify the Follower. The following table explains the different statuses of the Dexcom Follow app and provides troubleshooting tips for each status.
<table>
<thead>
<tr>
<th><strong>Follower System Status Screen</strong></th>
<th><strong>Description</strong></th>
<th><strong>Troubleshooting Tip</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="Dashboard.png" alt="Dashboard" /></td>
<td>Follower’s smart device or ApplW Watch does not have an Internet connection.</td>
<td>Make sure the Follower’s smart device has Wi-Fi, 3G, 4G, or LTE Internet connection. The Follower can check to see if the Internet connection is working by trying to open a web page on the Follower’s smart device.</td>
</tr>
</tbody>
</table>
## Follower System Status Screen

<thead>
<tr>
<th>Description</th>
<th>Troubleshooting Tip</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dexcom Share Cloud is not working.</td>
<td>Dexcom Share Cloud is temporarily not working. Follower will not be able to receive notifications from the Sharer. The Follower should remind the Sharer to always refer to the Dexcom G4 PLATINUM Receiver with Share first for CGM information.</td>
</tr>
</tbody>
</table>

## Follower Questions

**Why is the Dexcom Follow app indicating that I don’t have an Internet connection?**

- Because you do not have a Wi-Fi connection and do not
have cellular connectivity. Connect to a Wi-Fi network or move into an area that has cellular data service.

**Why is the Dexcom Follow app indicating that I have push notifications disabled?**
- You have disabled the ability for Dexcom Share to send you notifications. Go to your Notification Settings on your smart device, select the Dexcom Follow app in the list, turn notification center on and set the alert style to either Banners or Alerts. Set the sounds to on and set view in lock screen to on.

**Why is the Dexcom Follow app indicating that the Dexcom Share System is down?**
- The Dexcom Share Cloud is temporarily down. We are working on restoring it and it should be up shortly. Continue using your CGM system normally and check back with Dexcom Share later.

**My Sharer went low (or high) and I did not receive a notification. Why?**
- Ensure your low, urgent low or high notifications are turned on.
- Check the delay setting for the notifications. If the delay is a value other than 0, your Sharer must be below (or above) the threshold for that amount of time before a notification is sent.

**How do I pair my Apple Watch and iPhone?**
- Pairing is done through the Apple Watch App. See your Apple Watch user guide for details on how to pair your devices.

**Why is my iPhone displaying a glucose reading but my Apple Watch is not?**
- Check to see if your iPhone and Apple Watch are within range to receive signal.
- Make sure your Apple Watch battery is charged.
- If your iPhone is unlocked and in active use, the Apple Watch will not display the sensor glucose information.

**Why is my iPhone and Apple Watch displaying two**
different glucose readings?
- Sometimes there can be a brief delay in displaying the current glucose reading between smart devices.
- Rely on your receiver first and then the iPhone if the sensor glucose readings do not match or your smart device and Apple Watch.

Why did I not get a low (or high) glucose notification when my Sharer went low (or high)?
- If you are talking on the iPhone, you will get your Sharer’s glucose notifications similar to a text and it may not give an audible alert.
- If your iPhone is not within transmission range of your Apple Watch, you will not get a glucose notification on the Watch.
- If the Apple Watch is on its charger, it will not alert.

Following Checklist
Follow these requirements to ensure a successful Dexcom Follow app setup.
1. Make sure your smart device or Apple Watch is compatible with the Dexcom Follow app. To see a list of supported smart device and or Apple Watch models and Apple Operating System (iOS) and Android Operating System (OS) versions, go to the following link: http://www.dexcom.com/share2-compatibility.

2. Follower’s smart device or Apple Watch has Airplane Mode turned off.

3. Follower’s smart device or Apple Watch is not in Do Not Disturb.

4. Follower’s smart device or Apple Watch sound is on if you would like to hear notifications.

5. Follower’s smart device or Apple Watch is sufficiently charged or charging.

6. Follower’s smart device has 35MB of available memory.

7. Refer to the smart device or Apple Watch user manual for further instruction.

8. Make sure you do not disable your Dexcom Follow app notifications in the smart device or Apple Watch.
9. If using an Apple Watch, make sure it is an Apple Watch 1st Generation or later with iOS 8 or newer operating system.

10. If using an Apple watch, make sure Bluetooth is turned ON.

Tips:
2. Always confirm information with a blood glucose meter before you make treatment decisions.

Technical Information

Recommended Separation Distances Between Portable and Mobile RF Communications Equipment and the Dexcom G4 PLATINUM Receiver with Share

The receiver with Share is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the receiver with Share can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the receiver with Share as recommended in the Dexcom G4 PLATINUM System User’s Guide, according to the maximum output power of the communications equipment. Portable and mobile RF equipment include: baby monitors, Bluetooth wireless headsets, wireless routers, microwave ovens, laptops with internal Wi-Fi adapters, GSM cell phones, RFID scanners and hand-held security metal detector often used by security screeners.
Radio Frequency (RF) Communication Specifications

- Receiver with Share to smart device Wireless Link
  - Protocol: Bluetooth Low Energy (BLE, or Bluetooth v4.0);
  - Operating Distance: up to 15 feet (4.5 meters)
  - Output Power: 0dBm
  - Frequency: 2.4 GHz Industrial, Scientific, and Medical (ISM) band
  - Modulation: Gaussian frequency-shift keying
- Sharer smart device to Dexcom Share Cloud:
  - RF Operating Frequencies: Wi-Fi (802.11n) or cellular Internet connection
- Dexcom Share Cloud to Dexcom Follower smart device:
  - RF Operating Frequencies Wi-Fi (802.11n) or cellular Internet connection

Wireless Technology Requirements for Sharers
Sharer must install the Dexcom Share2 app on a compatible iPhone 4S (or later model), Pad 3 (or later)
model) or iPod touch 5th Generation (or later model) or i which contains a BLE (Bluetooth 4.0) Radio, and have a working Internet connection through a Wi-Fi or cellular data network.

**Wireless Technology Requirements for Followers**
Followers must install the Dexcom Follow app on a compatible iPhone 4 (or later model), iPad 2 (or later model) or iPod touch 5th Generation (or later model) or Android smart devices (version 4.4.4 or later) and have a working Internet connection through a Wi-Fi or cellular data network.

**Quality of Service**
For the Dexcom Share to operate, the Dexcom G4 PLATINUM Receiver with Share must have Share turned “On” in the Settings.

The Dexcom G4 PLATINUM Receiver with Share communicates with the Sharer smart device using a
BLE link. BLE technology uses what is called “adaptive frequency hopping” as the method for co-existence with other wireless devices sharing the 2.4 GHz Industrial, Scientific, and Medical (ISM) band.

A valid Internet connection is required for both the Sharer’s and Follower’s smart device. Adherence to the following guidelines will result in a consistent and reliable quality of service (QoS):

• Ensure the Sharer’s smart device has a working Internet connection via Wi-Fi or cellular network
• Ensure the Follower’s smart device has a working Internet connection via Wi-Fi or cellular network
• Ensure the Sharer’s smart device is within 15 feet of the Dexcom G4 PLATINUM Receiver with Share

The risks associated with QoS are mitigated because the data is requested from the Dexcom CGM Receiver every five minutes. In addition, as noted in the User Manual, the Dexcom Share System is a secondary notification
feature and is not intended for the replacement of the real-time continuous monitoring function of the Dexcom G4 PLATINUM System.

**Data Security**
The Dexcom G4 PLATINUM Receiver with Share is designed to accept *Bluetooth* pairing requests for connection only from authorized users of ismart devices that are using the Dexcom Share2 app. Data security and confidentiality are ensured by using an encrypted *Bluetooth* low energy communication link and an authentication pairing process that prevents unauthorized users from connecting to or eavesdropping on the Dexcom G4 PLATINUM Receiver with Share. During pairing, users are required to enter the serial number of the receiver. Be sure to safeguard the serial number of your receiver to prevent unauthorized users from pairing to your receiver. Cyclic redundancy checks are used in the error checking process to prevent the system from using corrupted data.
The Dexcom Share Cloud ensures data security through several redundant means. It is designed to only accept data from authorized Dexcom applications and allows data to be read only by authorized Followers using the Dexcom Follow app. All data are encrypted using secure HTTPS communication channels and the Cloud is authenticated with certificates. Data integrity is ensured by using cyclic redundancy checks in the error checking process to prevent the system from using corrupted data. Data confidentiality is ensured by encrypting all personally identifiable information in transit and when stored.

Data security has the potential to be compromised when connecting to the Internet through unknown Wi-Fi networks. Connect to secure networks if available. Always exercise caution when using unknown Wi-Fi networks, and, if unsure, turn off Wi-Fi and use a cellular data connection.
