

EZ SURF

QUICK INSTRUCTIONS

Step 1

There are two three piece sectional frame poles. Start by connecting each segment of the pole. Next place both poles on a flat surface across from one another.

Step 2

Grab The two bottom connectors and attach them to the bottom of each 3 piece sectional pole. This will be the base of your display.

Step 3

Now take the long arched frame pole and use it to connect both three piece poles together at the top where the pole bends. This will be the top of your display.

Step 4

Now Take the straight pole WITHOUT the end clamps. Connect this pole to the center connectors on each three piece pole. This will connect them together at the center.

Step 5

Now take the two small straight poles with bent ends. Connect them to both sides of the connectors at the base of each three piece pole. Once completed you will have the base of your display.

Step 6

Now take the last straight pole with connectors at either end. Connect one end at the center of one of the base poles, and connect the other end to at the center of the center frame pole. This will be the "back" of your display.

Step 7

Simply slide your graphic over the frame you just constructed, zip it/velcro it shut at the base, and you will have completed your EZ Surf Trade Show Display!
