

## Product Features

BigSky-32D is a double-sided extrusion with a profile width of 32 mm (1.26 in.). Custom-made on the premises, the BigSky-32D extrusion creates four-sided counters, podiums and towers in varied sizes. Standard Big Sky Counters and Towers accept four individual custom fabric graphics, excluding top and bottom. An inside corner extrusion can be added to make more complex shapes. You can add-on an acrylic countertop to convert the structure into a podium or counter display. LED lighting options are available to backlight your counter or tower to help your message really stand out.
