

Product Features

The VAIL-60D is a double-sided extrusion with a profile width of 60 mm (2.4 in.) This extrusion has a solid outside finish. VAIL-60D is best for standing independently since the profile width is just wide enough to provide ultimate stability. This extrusion works great overhead too because the thick profile width really stands out. When installing the fabric graphic, the silicone beading can fit 12 mm (.47 in.) deep and 3 mm (.11 in.) wide into the silicone beading trough. Not compatible with lights (cannot be back-lit.)
