The Department of Art, Art History & Visual Studies offers a Master’s Degree in Digital Art History and Computational Media. The program builds on courses and well-developed strengths at Duke University. The program requires 10 courses over three or four semesters in addition to summer research. Limited funding may become available in the form of grants and assistantships to students contingent upon positive progress in the program. Note that we are also pleased to announce a Samuel H. Kress Foundation Fellowship to promote the study of digital methods in art history and visual studies for women and underrepresented groups. Please see our website or contact us for further questions.

The Digital Art History track integrates historical disciplines and the study of cultural artifacts with digital visualization techniques for the analysis and presentation of research. Students affiliate with an existing faculty research initiative, from which they will develop their own independent research project for the M.A. thesis. Common themes that unite the various projects are the visualization of process, the representation of change over time, reenactualizing displaced objects and object biographies.

The M.A. prepares students for future work in such fields as art, architectural and urban history, public history, city planning and architectural design, cultural heritage, museum exhibition design, and visualization-based journalism, and provides a springboard for more advanced study in art history, archaeology, architectural history, and visual studies.
