51.2 If the Relevant Price is less than the dollar amount stated in section 14-215(1)(a) of the Withholding Law as at the Date of this Contract, the parties acknowledge that there are no obligations under the Withholding Law.

51.3 If Clearance Certificates for all the Sellers are provided to the Buyer prior to Completion, the parties acknowledge that there are no obligations under the Withholding Law.

51.4 If neither clauses 51.2 or 51.3 apply, then:

51.4.1 the Seller must provide to the Buyer any information required to enable the Buyer to comply with clause 51.4.2(a), within 5 days of written request from the Buyer;

If the Seller does not terminate this Contract in accordance with this clause 52.5, then this Contract remains on foot, subject to this clause 52.5, until either the Seller terminates the Contract pursuant to this clause 52.5, or waives the benefit of this clause 52.5 pursuant to clause 52.8.

- 52.6 If the Second Instalment of the Deposit is not paid on time in accordance with clause 52.3, then the Seller cannot immediately terminate the Contract for the Buyer's breach of an essential condition. # Important Asbestos Advice for ACT homes built before 1985

**Asbestos is hazardous but it can be managed safely.**

**Follow the three steps for managing materials containing asbestos (MCAs) in your home.**

## Step 1. Identify where MCAs may be in your home

**When was your house built?**

- If your house was built before 1985, the table below gives you an indication of where you are likely to find MCAs in your home. There is also a diagram on the back of this sheet showing where MCAs are commonly found.
- If your house was built after 1985, it is unlikely to contain MCAs.
- If in doubt, assume that materials DO contain asbestos.

### Common locations of MCAs in ACT homes\*

(Percentage (%) of properties sampled where asbestos was detected)

Location	Pre 1965	1965–1979	1980–1984	1985–now <sup>#</sup>
Eaves	86%	92%	40%	0%
Garage/shed	80%	70%	15%	0%
Bathroom	54%	75%	50%	0%
Laundry	75%	80%	50%	0%
Kitchen	52%	23%	15%	0%

\*Results of 2005 Asbestos Survey of over 600 ACT Homes. <sup>#</sup>One MCA was found in a 1985 house supporting roof tiles on a gable end.

## Step 2. Assess the risk

**Visually check the condition of the MCA – is it cracked, broken, etc?**

- If it's in good condition and left undisturbed, it does not pose a health risk.
- If you suspect it is not in good condition, arrange for appropriate maintenance or removal by a qualified person.

## Step 3. Manage safely

**Make sure you remember to:**

- Keep an eye on MCAs to make sure they remain in good condition.
- Consider removal of the MCA by a qualified person, when renovating or doing home repairs.
- Inform tradespeople working on your home of the location of any possible MCAs.
- Engage a qualified person if you decide to obtain a professional asbestos report on MCAs in your home.

For further information or advice on managing asbestos or home renovations visit the asbestos website [www.asbestos.act.gov.au](http://www.asbestos.act.gov.au) or call 13 22 81.

General access limitations	
Was the property furnished at the time of inspection? Yes	<i>Note – Where a property is furnished at the time of the inspection, floor coverings, window treatments and stored goods may be concealing some defects.</i>
External	A full inspection was carried out to the exterior.
Garage	A full inspection was carried out to the garage.
Concrete tiled roof	A full inspection was carried out to the roof top.
Metal roof cladding	A full inspection was carried out to the roof top.
Roof void space	Please note: Inspection over the eaves was restricted due to low pitch and clearance. This allowed only for a limited visual inspection from a distance to be carried out, other restrictions found in the roof void, insulation and ducting flex on top of ceiling, reducing a visual inspection of the ceiling and frame timbers. Damage/defects/timber pest, it is recommended that access be gained to these areas as they may contain concealed defects.

## Conclusion and Summary

The purpose of the inspection is to identify the major defects and safety hazards associated with the property at the time of the inspection. The inspection and reporting is limited to a visual assessment of the Building Members in accord with Appendix C AS4349.1-2007.

The overall condition of this building has been compared to similar constructed buildings of approximately the same age where those buildings have had a maintenance program implemented to ensure that the building members are still fit for purpose.

**The incidence of major defects** in this residential building as compared with similar buildings is considered: **Typical.**

**The incidence of minor defects** in this residential building as compared with similar buildings is considered: **Typical.**

**The overall condition** of this residential building in the context of its age, type and general expectations of similar properties is: **Above Average.**

*Please Note:* This is a general appraisal only and cannot be relied on its own – read the report in its entirety.

This summary is supplied to allow a quick and superficial overview of the inspection results. This summary is **NOT** the report and cannot be relied upon on its own. This summary must be read in conjunction with the full report and not in isolation from the report. If there should happen to be any discrepancy between anything in the report and anything in this summary, the information in the report shall override any details in this summary.

## Definitions

**Above Average:** The overall condition is above that consistent with dwellings of approximately the same age and construction. Most items and areas are well maintained and show a reasonable standard of workmanship when compared with buildings of similar age and construction.

**Average:** The overall condition is consistent with dwellings of approximately the same age and construction. There will be areas or items requiring some repair or maintenance.

**Below Average:** The building and its parts show some significant defects and/or very poor non- tradesman like workmanship and/or long term neglect and/or defects requiring major repairs or reconstruction of major building elements.

**Major Defect:** Is a defect requiring building works to avoid unsafe conditions, loss of function, or further worsening of the defective item.

**Minor Defect:** Any defect other than what is described as a major defect.

**Accessible area:** Is any area of the property and structures allowing the inspector safe and reasonable access within the scope of the inspection.

## Important Advice

**Note:** In the case of strata and company title properties, the inspection is limited to the interior and immediate exterior of the particular unit being inspected. The exterior above ground floor level is not inspected. The complete inspection of other common property areas would be the subject of a Special-Purpose Inspection Report which is adequately specified.

**Trees:** Where trees are too close to the house this could affect the performance of the footing as the moisture levels change in the ground. A Geotechnical Inspection can determine the foundation material and provide advice on the best course of action with regards to the trees.

**The septic tanks:** Should be inspected by a licensed plumber.

**Swimming pools:** Swimming pools/spas are not part of the standard building report under AS4349.1-2007 and are not covered by this report. We strongly recommend a pool expert should be consulted to examine the pool and the pool equipment and plumbing as well as the requirements to meet the standard for pool fencing. Failure to conduct this inspection and put into place the necessary recommendations could result in finds for non-compliance under the legislation.

**Surface water drainage:** The retention of water from surface run off could have an effect on the foundation material, which in turn could affect the footings to the house. Best practice is to monitor the flow of surface water and stormwater runoff and have the water directed away from the house or to storm water pipes by a licensed plumber/drainier.

**Weep holes:** External brick (and stone) walls are porous material it actually behaves much like a sponge. During a rain event, the masonry wall actually absorbs water and actually stores it. The weep holes are designed for two purposes; it provides an opening to allow water to drain out through the bottom of the wall, and it is intended to allow ventilating air to enter behind the wall to help dry the structure. If weep holes have been noted as being not installed, it is recommended to consult a builder on how to best rectify the problem.

## Scope and Limitations

**Important information regarding the scope and limitations of the inspection and this report:** Any person that relies upon the contents of this report, does so, acknowledging that the following clauses which define the scope and limitations of the inspection form an integral part of the report.

**1) This report is NOT an all-encompassing** report, dealing with the building from every aspect. It is a reasonable attempt to identify any obvious or significant defects apparent at the time of the inspection. Whether or not a defect is considered significant or not, depends to a large extent, upon the age and type of the building inspected. This report is not a Certificate of Compliance with the requirements of any act, regulation, ordinance or by-law. It is not a structural report. Should you require any advice of a structural nature, you should contact a structural engineer.

**2) This is a visual inspection only**, limited to those areas and sections of the property fully accessible and visible to the Inspector on the date of inspection. The inspection **DID NOT** include breaking apart, dismantling, removing or moving objects including, but not limited to; foliage, mouldings, roof insulation/sisalation, floor or wall coverings, sidings, ceilings, floors, furnishings, appliances or personal possessions. The inspector CANNOT see inside walls, between floors, inside skillion roofing, behind stored goods in cupboards and other areas that are concealed or obstructed. The inspector **DID NOT** dig, gouge, force or perform any other invasive procedures. Visible timbers **CANNOT** be destructively probed or hit without the written permission of the property owner.

**3) This report does not and cannot make comment upon:** defects that may have been concealed, the assessment or detection of defects (including rising damp and leaks) which may be subject to the prevailing weather conditions, whether or not services have been used for some time prior to the inspection and whether this will affect the detection of leaks or other defects (*eg. In the case of shower enclosures the absence of any dampness at the time of the inspection does not necessarily mean that the enclosure will not leak*), the presence or absence of timber pests, gas-fittings, common property areas, environmental concerns, the proximity of the property to flight paths, railways, or busy traffic, noise levels, health and safety issues, heritage concerns, security concerns, fire protection, site drainage (apart from surface water drainage), swimming pools and spas (non- structural), detection and identification of illegal building work, detection and identification of illegal plumbing work, durability of exposed finishes, neighbourhood problems, document analysis, electrical installation, any matters that are solely regulated by statute, or any area(s) or item(s) that could not be examined by the inspector. Accordingly, this report is not a guarantee that defects and/or damage does not exist in any inaccessible, or partly inaccessible areas or sections of the property. (NB: Such matters may upon request, be covered under the terms of a special-purpose property report.)

**4) Consumer complaints procedure:** In the event of any dispute or claim arising out of, or relating to, the inspection or the report, you must notify us as soon as possible of the dispute or claim by email, mail, or in person. You must allow us (*which includes people nominated by us*), to visit the property (*which must occur within twenty-eight (28) days of your notification to us*), and give us full access in order that we may fully investigate the complaint. You will be provided with a written response to your dispute or claim within twenty eight (28) days of the date of the inspection.

If you are not satisfied with our response, you must within twenty-one (21) days, of your receipt of our written response refer the matter to a mediator from *The Master Builders Association*, as nominated by us. The cost of the mediator will be borne equally by both parties, or as agreed as part of the mediated settlement.

Should the dispute or claim not be resolved by mediation, then the dispute or claim will proceed to arbitration. *The Master Builders Association* will appoint an arbitrator who will hear and resolve the dispute. The arbitration, subject to any directions of arbitrator, will proceed in the following manner:

(a) The parties must submit all written submissions and evidence to the arbitrator within twenty-one (21) days of the appointment of the arbitrator; and

(b) The arbitration will be held within twenty-one (21) days of the arbitrator receiving the written submissions.

The arbitrator will make a decision determining the dispute or claim within twenty-one (21) of the final day of the arbitration. The Arbitrator may, as part of his determination, determine what costs, if any, each of the parties are to pay and the time by which the parties must be paid any settlement or costs.

The decision of the Arbitrator is final and binding on both parties. Should the Arbitrator order either party to pay any settlement amount or costs to the other party but not specify a time for payment then such payment shall be made within twenty one (21) days of the order.

In the event You do not comply with the above Complaints Procedure and commence litigation against Us then You agree to fully indemnify Us against any awards, costs, legal fees and expenses incurred by Us in having your litigation set aside or adjourned to permit the foregoing Complaints Procedure to complete.

**5) Magnesite flooring disclaimer:** No inspection for magnesite flooring was carried out at the property and no report on the presence or absence of magnesite flooring is provided. You should ask the owner whether magnesite flooring is present and/or seek advice from a structural engineer.

**6) Asbestos disclaimer:** **No inspection for asbestos was carried out at the property and no report on the presence or absence of asbestos is provided.** If during the course of the Inspection asbestos or materials containing asbestos happened to be noticed, then this may be noted in the *Additional Comments* section of the report. Buildings built prior to 1982 may have wall and/or ceiling sheeting and other products including roof sheeting that contains Asbestos. Even buildings built after this date up until the early 90s may contain some Asbestos. Sheeting should be fully sealed. If concerned or if the building was built prior to 1990 or if asbestos is noted as present within the property, then you should seek advice from a qualified asbestos removal expert as to the amount and importance of the asbestos present and the cost of sealing or removal. Drilling, cutting or removing sheeting or products containing Asbestos is a high risk to peoples' health. You should seek advice from a qualified asbestos removal expert.

**7) Mould (mildew and non-wood decay fungi) disclaimer:** Mildew and non-wood decay fungi is commonly known as mould. However, mould and their spores may cause health problems or allergic reactions such as asthma and dermatitis in some people. *No inspection for mould was carried out at the property and no report on the presence or absence of mould is provided.* If in the course of the inspection, mould happened to be noticed, it may be noted in the *Additional Comments* section of the report. If mould is noted as present within the property, or, if you notice mould and you are concerned as to the possible health risk resulting from its presence, then you should seek advice from a qualified expert.

**8) Estimating disclaimer:** Any estimates provided in this report are merely opinions of the possible costs that could be encountered, based on the knowledge and experience of the inspector, and are not estimates in the sense of being a calculation of the likely costs to be incurred. The estimates are *NOT* a guarantee or quotation for work to be carried out. The actual cost is ultimately dependent upon the materials used, standard of work carried out, and what a contractor is prepared to do the work for. It is recommended in *ALL* instances, that multiple independent quotes are sourced prior to any work being carried out. The inspector accepts no liability for any estimates provided throughout this report.

**9) Site drainage:** The general adequacy of site drainage is not included in the Standard Property Report. Comments on surface water drainage are limited as where there has been either little or no rainfall for a period of time, surface water drainage may appear to be adequate but then during periods of heavy rain, may be found to be inadequate. Any comments made in this section are relevant only in light of the conditions present at the time of inspection.

## Important Disclaimer

**DISCLAIMER OF LIABILITY:** No liability shall be accepted on an account of failure of the report to notify any problems in the area(s) or section(s) of the subject property physically inaccessible for inspection, or to which access for inspection is denied by or to the inspector, *(including, but not limited to, any area(s) or section(s) so specified by the report).*

### This is not a compliance Report strictly in accordance with Civil Law (Sale of Residential Property) Regulations:

The report may contain copies of any approved plans, building approvals, building permit and certificates of occupancy. However, any comments made by the person who prepared the report as to whether or not, in the opinion of the inspector, the structures on the land substantially comply with the approved plans (if any) are made on the basis of a cursory glance of the plans and not upon a detailed examination. Any opinion expressed as to whether or not any building approval or approval under the *Land Planning and Environment Act 1991*, is based on the limited knowledge and belief, at the time, of the inspector. The purchaser is advised that a special purpose report is available through the inspector to advise more fully in respect to these matters. The structures may have been damaged by pests, storm, strong wind or fire or the vendor may have carried out alterations and/or additions to the property since the inspection date. The report may no longer reflect the true condition of the property. The structure(s) may no longer be in accordance with the attached plans etc. **IT IS STRONGLY RECOMMENDED** that, if the purchaser has any concerns in respect to the compliance of the structures, a special purpose report be obtained. Alternatively, the purchaser should rely upon their own enquiries.

### Other Inspections and Reports

As a purchaser you may like to consider obtaining the following Inspections and Reports prior to any decision to purchase the property, so that you can be well equipped to make an informed decision. These Inspections and reports fall outside the guidelines for a Standard Property Report. All though appliances may be listed in the report, they have not been tested as this is outside the scope of the standard building inspection. Other inspections recommended to the purchaser before making their decision are;

Asbestos Inspection	Drainage Inspection	Plumbing Inspection
Electrical Inspection	Air-conditioning Inspection	Appliances Inspection
Mould Inspection	Structural (Engineer)	Alarm/Intercom/Data System
Gas fitting Inspection	Garage Door Mechanical	Hydraulics Inspection
Mechanical Services	Hazards Inspection	Fire/Chimney Inspection
Swimming pools and associated filtration and similar equipment	Durability of Exposed Surfaces	Estimating Report

### Cracking of Buildings Items - Definitions

**Appearance defect:** Where in the inspector's opinion the appearance of the building item has deteriorated at the time of the inspection and the significance of this cracking is unknown until further information is obtained.

**Serviceability defect:** Where in the inspector's opinion the performance of the building item is flawed at the time of the inspection and the expected significance of this cracking is unknown until further information is obtained.

**Structural defect** - Where in the inspector's opinion the structural soundness of the building item has diminished at the time of the inspection and the expected significance of this cracking is unknown until further information is obtained.

**Important!**

Regardless of the type of crack(s) a pre-purchase building inspector carrying out, a pre-purchase inspection within the scope of a visual inspection is unable to determine the expected consequences of the cracks obtaining information regarding:

-  The nature of the foundation material on which the building is resting;
-  The design of the footings;
-  The site landscape;
-  The history of the cracks; and
-  Carrying out an invasive inspection.

All of the above fall outside the scope of this pre-purchase inspection, however the information obtained from the five items above are valuable in determining the expected consequences of the cracking and any remedial work needed.

Cracks that are small in width and length on the day of the inspection may have the potential to develop over time into Structural Problems for the Home Owner resulting in major expensive rectification work been carried out.

If cracks have been identified in the report above, then A **structural engineer** is required to determine the significance of the cracking prior to a decision to purchase.

<b>Categorisation of Cracking in Masonry</b>		
<b>Description of typical damage and required repair</b>	<b>Width limit</b>	<b>Damage Category</b>
Hairline cracks	$\leq 0.1$ mm	0
Fine cracks that do not need repair	$\leq 1.0$ mm	1
Cracks noticeable but easily filled, doors and windows stick slightly.	$\leq 5.0$ mm	2
Cracks can be repaired and possibly a small amount of wall will need to be replaced. Door and windows stick, service pipes can fracture. Weather-tightness often impaired.	$> 5.0$ mm $\leq 15.0$ mm (or a number of cracks 3.0 mm or more in one group)	3
Extensive repair work involving breaking out and replacing sections of walls, especially over doors and windows. Door frames distort, walls lean or bulge noticeably, some loss of bearing in beams. Service pipes disrupted.	$> 15.0$ mm $\leq 25$ mm but also depends on number of cracks	4

**External Wall Condition**

The condition of the external brick walls is generally sound.

### Notice to the Purchaser (ACT Only)

(a) At the Exchange and prior to the 'cooling-off period' you were given an inspection report on the Property you intend purchasing. This Report reflects the condition of the property existing at the time of the inspection (31/01/2022) and may not reflect the current state. The structures may have been damaged by pests, storm, strong wind or fire or the vendor may have carried out alterations and/or additions to the property since the inspection date. The report may no longer reflect the true condition of the property. The structure(s) may no longer be in accordance with the attached plans etc. It is, therefore, ***very strongly recommended*** that you urgently arrange for another inspection and report in accordance with Australian Standard AS4349.1 to be carried out prior to exchange or prior to the expiration of any 'cooling off period' and prior to settlement.

(b) If the report indicated the presence of termite damage or recommends any other inspections or treatments you should obtain copies of these reports and any treatment proposals, certificates of treatment carried out, including details of all repairs including copies of quotations, invoices and any other reports. It is ***strongly recommended*** that you arrange for an inspection and report in accordance with AS 4349.3 to verify that the treatment has been successful and carried out in accordance with AS 3660.2 and a further building inspection in accordance with AS 4349.1.

(c) If you fail to procure a further inspection and report as recommended in (a) and (b) or fail to obtain copies of other reports, treatment proposals, certificates of treatment carried out, details of all repairs including copies of quotations, invoices and any other reports as recommended in (b) above, then you agree that you have decided not to have a further inspection and report carried out, or to obtain copies of treatment proposals, certificates of treatment carried out, details of all repairs including copies of quotations, invoices and any other reports and have relied upon your own enquires and the report knowing the possible consequences and that the condition of the property, as stated in the report, may have changed.

(d) You agree that the person carrying out the inspection and the company, partnership or sole trader that employs that person, will have no liability to you for any damage or loss you may suffer as a result of your entering the contract to purchase the property, or in connection with completing the purchase of the property as a result of your failure to heed the advice given in (a) and (b) and the warning contained in (c) above, and may use such failure in defence of any claim that you may later make against any of them.

**NB.** It is a condition of your right to rely upon the Report that you transmit by fax, post or otherwise deliver the signed "Notice to the Purchaser (ACT only) to the company, partnership or sole trader at the address detailed on the front of the Report not less than four (4) days prior to the date of settlement. If you fail to complete, sign or deliver the notice then it will be deemed that you did not rely upon the report in respect to your decision as to whether or not to purchase the property. This may seriously affect any rights to future compensation to which you may be entitled.

## Conditions of this inspection

**Important Information** Any person who relies upon the contents of this report does so acknowledging that the following clauses which define the Scope and Limitations of the inspection form an integral part of the report.

**1. THIS IS A VISUAL INSPECTION ONLY** in accord with the requirements of AS 4349.3 Inspection of buildings Part 3: Timber pest inspections. Visual inspection was limited to those areas and sections of the property to which reasonable access (See Definition) was both available and permitted on the date of Inspection. The inspection DID NOT include breaking apart, dismantling, removing or moving objects including, but not limited to, foliage, mouldings, roof insulation/sisalation, floor or wall coverings, sidings, ceilings, floors, furnishings, appliances or personal possessions. The inspector CANNOT see inside walls, between floors, inside skillion roofing, inside the eaves, behind stored goods in cupboards, in other areas that are concealed or obstructed. The inspector DID NOT dig, gouge, force or perform any other invasive procedures. An invasive inspection will not be performed unless a separate contract is entered into. In an occupied property it must be understood that furnishings or household items may be concealing evidence of Timber Pests which may only be revealed when the items are moved or removed. In the case of Strata type properties only the interior of the unit is inspected.

**2. SCOPE OF REPORT:** This Report is confined to reporting on the discovery, or non discovery, of infestation and/or damage caused by subterranean and dampwood termites (white ants), borers of seasoned timber and wood decay fungi (hereinafter referred to as "Timber Pests"), present on the date of the Inspection. The Inspection did not cover any other pests and this Report does not comment on them. Dry wood termites (Family: KALOTERMITIDAE) and European House Borer (*Hylotrupes bujulus Linnaeus*) were excluded from the Inspection, but have been reported on if, in the course of the inspection, any visual evidence of infestation happened to be found. If *Cryptotermes brevis* (West Indian Dry Wood Termite) or *Hylotrupes bujulus Linnaeus* are discovered we are required by law to notify Government Authorities. If reported a special purpose report may be necessary.

**3. LIMITATIONS:** Nothing contained in the Report implies that any inaccessible or partly inaccessible areas or sections of the property being inspected by the Inspector on the date of the Inspection were not, or have not been, infested by Timber Pests. Accordingly this Report is not a guarantee that an infestation and/or damage does not exist in any inaccessible or partly inaccessible areas or sections of the property. Nor is it a guarantee that a future infestation of Timber Pests will not occur or be found.

**4. DETERMINING EXTENT OF DAMAGE:** The Report is NOT a structural damage Report. We claim no expertise in building and any inexpert opinion we give on timber damage CANNOT be relied upon. The Report will not state the full extent of any timber pest damage. The Report will state timber damage found as 'slight', 'moderate', 'moderate to extensive' or 'extensive'. This information is not the opinion of an expert. If any evidence of Timber Pest activity and/or damage resulting from Timber Pest activity is reported either in the structure(s) or the grounds of the property, then you must assume that there may be concealed structural damage within the building(s). This concealed damage may only be found when wall linings, cladding or insulation are removed to reveal previously concealed timbers. An invasive Timber Pest Inspection (for which a separate contract is required) is strongly recommended and you should arrange for a qualified person such as a Builder, Engineer, or Architect to carry out a structural inspection and to determine the full extent of the damage and the extent of repairs that may be required. You agree that neither we nor the individual conducting the Inspection is responsible or liable for the repair of any damage whether disclosed by the report or not.

**5. MOULD:** Mildew and non wood decay fungi is commonly known as Mould and is not considered a Timber Pest. However, Mould and their spores may cause health problems or allergic reactions such as asthma and dermatitis in some people. No inspection for Mould was carried out at the property and no report on the presence or absence of Mould is provided. Should any evidence of Mould happen to be noticed during the inspection, it will be noted in this report. If Mould is noted as present within the property and you are concerned as to the possible health risk resulting from its presence then you should seek advice from your local Council, State or Commonwealth Government Health Department or a qualified expert such as an Industry Hygienist.

**6. DISCLAIMER OF LIABILITY:** No liability shall be accepted on account of failure of the Report to notify any Termite activity and/or damage present at or prior to the date of the Report in any areas(s) or section(s) of the subject property physically inaccessible for inspection, or to which access for Inspection is denied by or to the Licensed Inspector (including but not limited to any area(s) or section(s) so specified by the Report).

**7. DISCLAIMER OF LIABILITY TO THIRD PARTIES:** This Report is made solely for the use and benefit of the Client named on the front of this report. No liability or responsibility whatsoever, in contract or tort, is accepted to any third party who may rely on the Report wholly or in part. Any third party acting or relying on this Report, in whole or in part, does so at their own risk. For those properties in the Australian Capital Territory (ACT) this report complies with the regulations applicable to the Civil Law (Sale of residential property) Bill 2003.

**NB.** No reliance may be placed on the report for any contract entered into more than six months after the date of inspection.

## Visual Timber Pest Inspection

### 1. Brief Description of Structures(s) Inspected

**1.1 Building:** Free standing house

**Height:** Single storey

**Construction Details:**

**Floor:** Slab on ground

**Roof:** Concrete tiled

**Walls:** Brick veneer

**Garaging:** Double garage

**Outbuilding(s):** Pergola

**Fences:** Timber paling

\*Any building or a part of a building that is constructed on a concrete slab is always more susceptible to termite attack because of possible concealed termite entry.

**1.2. Areas inspected:** Only structures, fences &/or trees within 50m of the building but within the property boundaries were inspected. The areas inspected were: Interior, exterior, roof void and timber boundary fencing, garage, fences and grounds (posts, stumps, trees, and landscaped timbers).

**1.3. Areas NOT inspected:** No inspection was made, and no report is submitted, of inaccessible areas. These include, but may not be limited to, cavity walls, concealed frame timbers, eaves, flat roofs, fully enclosed patios subfloors, soil concealed by concrete floors, fire place hearths, wall linings, landscaping, rubbish, floor coverings, furniture, pictures, appliances, stored items, insulation, hollow blocks/posts, etc.

**1.4. Other area(s)\* to which *reasonable access* for inspection was NOT AVAILABLE and the reason(s) why include:** 1.5 metres around the inside perimeter of the roof void, from the eave inwards due to the height between the ceiling joists and rafters.

\* Please note since a complete inspection of the above areas was not possible, timber pest activity and/or damage may exist in these areas.

**1.5. Area(s)\* in which Visual Inspection was obstructed or restricted and the reason(s) why include:**

**Exterior:** Behind down pipes as they were secured to the exterior cladding.

**Interior:** Floor coverings obstructed the visual inspection of the floor.

**Roof Void:** Due to the inspection being a visual seasoned timber inspection the removal of insulation was not conducted. Insulation may conceal timber pest damage/activity in the roof timbers not visible in the inspection.

\* Please note since a complete inspection of the above areas was not possible, timber pest activity and/or damage may exist in these areas.

**1.6. High Risk Area(s) to which Access should be gained, or fully gained, since they may show evidence of Timber Pests and/or damage:** Interior, exterior and roof void.

**1.7. The property was furnished at the time of inspection.**

Where a property is furnished at the time of the inspection, then you must understand that furnishings and stored goods may be concealing evidence of timber pest activity. This evidence may only be revealed when the property is vacated. A further inspection of the vacant property is strongly recommended in this case.

## 2. Subterranean Termites

**2.1. No active (live) termites were present at the time of inspection.**

**2.2. A termite nest was not located.**

**NOTE:** Where evidence of termite activity was found in the grounds then the risk to buildings is very high. A treatment to eradicate the termites and to protect the building(s) should be carried out. Where the evidence of termite workings was found in the grounds or the building(s) then the risk of a further attack is very high.

**2.3. No evidence of subterranean termite workings and/or damage was found.**

**2.4. No timber damage was visible at the time of the inspection.**

**2.5. VERY IMPORTANT:** If live termites or any evidence of termite workings or damage was reported above within the building(s) or in the grounds and fences then it must be assumed that there may be concealed termite activity and/or timber damage. This concealed activity or damage may only be found when alterations are carried out such as when wall linings, cladding or insulation are removed or if you arrange for an invasive inspection. We claim no expertise in structural engineering or building. We strongly recommend that you have a qualified person such as a Builder, Engineer, Architect or other qualified expert in the building trade determine the full extent of the damage, if any. This may require an invasive inspection. We take no responsibility for the repair of any damage, whether disclosed by this report or not. (See Terms & Limitations).

Where visual evidence of termite workings and/or damage is reported above, but no live termites were present at the time of inspection, you must realise that it is possible that termites are still active in the immediate vicinity and the termites may continue to cause further damage. It is not possible, without benefit of further investigation and a number of inspections over a period of time, to ascertain whether any infestation is active or inactive. Active termites may simply have not been present at the time of inspection due to a prior disturbance, climatic conditions, or they may have been utilising an alternative feeding source. Continued, regular, inspections are essential. Unless written evidence of a termite protection program in accord with "Australian Standard 3660" with ongoing inspections is provided, you must arrange for a treatment in accord with "Australian Standard 3660" to be carried out to reduce the risk of further attack.

**No signs or evidence of a termite treatment were found.**

**WARNING:** If evidence of drill holes in concrete or brickwork or other signs of a possible previous treatment is reported then the treatment was probably carried out because of an active termite attack. Extensive structural damage may exist in concealed areas. You should have an invasive inspection carried out and have a builder determine the full extent of any damage and the estimated cost of repairs as the damage may only be found when wall linings etc are removed. Normally if a termite treatment has been carried out then a durable notice should be located in the meter box indicating the type of termite shield system, treated zone or combination has been installed.

**2.6. A durable notice (termite management notice) was not found during the inspection.**

This firm can give no assurances with regard to work that may have been previously performed by other firms. You should obtain copies of all paperwork and make your own inquiries as to the quality of the treatment, when it was carried out and warranty information. In most cases you should arrange for a treatment in accord with "Australian Standard 3660" be carried out to reduce the risk of further attack.

**2.7. General remarks:** A more thorough INVASIVE INSPECTION is available. Where any current visible evidence of Timber Pest activity is found it is strongly recommended that a more invasive inspection is performed.

### 3. Borers of Seasoned Timber

**3.1. No visible evidence of borers was found.**

**3.2. *Lyctus brunneus* (powder post beetle)** is not considered a significant pest of timber. These borers only attack the sapwood of certain susceptible species of hardwood timber. Since it is a requirement under the timber marketing act 1946 that structural timbers contain no more than 25% Lyctid susceptible sapwood, these borers are not normally associated with structural damage. Also due to the need for moisture content of sapwood to be greater than 15% for it to be palatable to Lyctids, generally after approximately 10 years in service, the moisture content falls below 15% therefore the attack by Lyctid ceases. Replacement of the affected timbers is not recommended and treated is not approved.

**3.3. *Anobium punctatum* (furniture beetle) and *Calymnaderus iricisus* (Queensland pine beetle)** must always be considered active, unless proof of treatment is provided, because, unless the timber is ground up, one cannot determine conclusively if activity has ceased. Total timber replacement of all susceptible timbers is recommended. A secondary choice is treatment. However, the evidence and damage will remain and the treatment may need to be carried out each year for up to three years.

**3.4.** Borer activity is usually determined by the presence of exit holes and/or frass. Since a delay exists between the time of initial infestation and the appearance of these signs, it is possible that some borer activity may exist that is not discernible at the time of inspection.

**3.5. Borer recommendations for *Anobium punctatum* (furniture beetle) and *Calymnaderus iricisus* (Queensland pine beetle)** Replacement of all susceptible timbers is always preferred since, in the event of selling the property in the future it is probable that an inspector will report the borers as active (see above). A chemical treatment to control and/or protect against Furniture beetle and/or Queensland pine beetle can be considered as a less effective, lower cost option. Before considering this option you should consult with a builder (See Conditions of this inspection) to determine if the timbers are structurally sound. Following the initial treatment a further inspection is essential in twelve months' time to determine if further treatment is needed. Treatments over a number of consecutive years may be required.

### 4. Fungal Decay caused by Wood Decay Fungi

**4.1 Visible evidence of wood decay fungi (wood rot) was found and located to timber fence line.**

If any evidence of fungal decay or damage is reported you should consult a building expert to determine the full extent of damage and the estimated cost of repairs or timber.

## 5. Conditions that are conducive to Timber Pests

**5.1. Water leaks,** especially in or into the subfloor or against the external walls, increases the likelihood of termite attack. Leaking showers or leaks from other 'wet areas' also increase the likelihood of concealed termite attack. Hot water overflows should be plumbed away from the building.

**At the time of the inspection no leaks were found.**

If any leaks were reported then you must have a plumber or other building expert to determine the full extent of damage and the estimated cost of repairs.

**5.2. Moisture: At the time of the inspection moisture readings were normal.** High moisture readings can be caused by any one of the following: poor ventilation, ineffective drainage, leaking pipes, leaking roofs, defective flashing or by concealed termite activity. The areas of high moisture should be investigated by way of an invasive inspection. If high moisture was reported then you must have a building expert investigate the moisture and its cause and determine the full extent of damage and the estimated cost of repairs.

**5.3. Drainage:** Poor drainage, especially in the subfloor, greatly increases the likelihood of wood decay and termite attack. We claim no expertise in plumbing and drainage, however it appears that drainage is **not applicable, as the house is built on a concrete slab.**

Where drainage is considered inadequate a plumber, builder or other building expert must be consulted.

**5.4. Hot water services and air conditioning units** which release water alongside or near to building walls should be piped to a drain (if not possible then several metres away from the building) as the resulting wet area is highly conducive to termites.

**There is no need for work to be carried out.**

**5.5. Ventilation:** particularly in the sub-floor region it is important in minimising the opportunity for Timber Pests to establish themselves within a property. We claim no expertise in building, however, **the ventilation appears to be not applicable, as the house is built on a concrete slab.**

Where ventilation is considered inadequate a builder or other expert should be consulted, in the case where vent airflow is physically blocked or restricted, the obstruction must be removed.

**5.6. Mould** on walls and ceilings etc. is an indicator of high moisture or very poor ventilation. If reported you need to have the reason investigated by a builder or an Industry Hygienist as its presence may indicate the presence of a water leak, wood decay or termites behind the wall or ceiling sheeting.

**Mould was not found at the time of inspection.**

**5.7. Slab Edge Exposure:** Where external concrete slab edges are not exposed there is a high risk of concealed termite entry. In some buildings built since July 1995 the edge of the slab forms part of the termite shield system. In these buildings an inspection zone of at least 75mm should be maintained to permit detection of termite entry. The edge should not be concealed by render, tiles, cladding, flashings, adjoining structures, paving, soil, turf or landscaping etc. Where this is the case you should arrange to have the slab edge exposed for inspection. Concealed termite entry may already be taking place but could not be detected at the time of the inspection. This may have resulted in concealed timber damage.

**The slab edge inspection zone does not apply to this property.**

*Note: A very high proportion of termite attacks are over the slab edge. Covering the slab edge makes concealed entry easy. This is particularly true of infill type slab construction. Termite activity and or damage may be present in concealed timbers of the building. We strongly recommend frequent regular inspections in accordance with AS 3660.2.*

**5.8. Weep holes in external walls:** It is very important that soil, lawn, concrete paths or pavers do not cover the weep holes. Sometimes they have been covered during the rendering of the brick work. They should be clean and free flowing. Covering the weep holes in part or in whole may allow undetected termite entry.

**Weep holes were clear allowing the free flow of air.**

**5.9. Termite Shields (Ant Caps)** should be in good order and condition so termite workings are exposed and visible. This helps stop termites gaining undetected entry. Joins in the shielding should have been soldered during the installation. Whenever it is observed that the joins in the shielding have not been soldered then the shielding must be reported as inadequate. It may be possible for a builder to repair the shielding. If not, a chemical treated zone may need to be installed to deter termites from gaining concealed access to the building. Missing, damaged or poor shields increase the risk of termite infestation.

We claim no expertise in building. However, in our opinion the termite barrier is **not applicable, as the house is built on a concrete slab**. If considered inadequate a builder or other building expert should be consulted. Other physical shield systems are not visible to inspection and no comment is made on such systems.

**5.10. Other areas and/or situations that appear conducive to (may attract) subterranean termite infestation:**

**Uninspected areas:** Uninspected areas may have present active termites and/or damage/conducive conditions for timber pests.

**Timber in contact with the soil:** The timber fencing is conducive to termites when in contact with the ground.

**5.11. Comments on other conducive conditions:** Enclosed patios will allow for undetected entry of termites into the building. Enclosed pathways will allow for undetected entry of termites into the building.

## 6. OVERALL ASSESMENT OF THE PROPERTY:

**6.1.** Where the evidence of live termites or termite damage or termite workings (mudding) was found in the building(s) then the risk of a further attack is extremely high. Where evidence of live termites or termite damage or termite workings was found in the grounds but not in the buildings then the risk to buildings must be reported as high to extremely high.

**6.2.** At the time of the inspection the **DEGREE OF RISK OF SUBTERRANEAN TERMITE INFESTATION** to the overall property was considered to be **MODERATE**.

**6.3. SUBTERRANEAN TERMITE TREATMENT RECOMMENDATION:** A management program in accord with AS 3660-2000 to protect against subterranean termites is considered to be Visual inspection of the dwelling and grounds for timber pests ingress and/or activity should be undertaken by a qualified pest inspector every 6-12 months, six month inspections are highly recommended by ACTBIS as early detection reduces the damage caused.

**6.4. FUTURE INSPECTIONS:** AS 3660.2-2000 recommends *"regular competent inspections should be carried out at least on an annual basis but more frequent inspections are strongly recommended"*. It goes on to inform that *"regular inspections will not prevent termite attack, but may help in the detection of termite activity. Early detection will allow remedial treatment to be commenced sooner and damage to be minimized"*.

Due to the degree of risk of subterranean termite infestation noted above and all other findings of this report, we strongly recommend that a full inspection and written report in accord with AS 4349.3 or AS 3660.2-2000 is conducted at this property every 12 months.

### Important maintenance advice regarding pest management for protecting against timber pests:

You should read and understand the following important information. It will help explain what is involved in a timber pest inspection, the difficulties faced by a timber pest inspector and why it is not possible to guarantee that a property is free of timber pests. It also details important information about what you can do to help protect your property from timber pests. This information forms an integral part of the report.

Any structure can be attacked by Timber Pests. Periodic maintenance should include measures to minimise possibilities of infestation in and around a property. Factors which may lead to infestation from Timber Pests include situations where the edge of the concrete slab is covered by soil or garden debris, filled areas, areas with less than 400mm clearance, foam insulation at foundations, earth/wood contact, damp areas, leaking pipes, etc; form-work timbers, scrap timber, tree stumps, mulch, tree branches touching the structure, wood rot, etc. Gardens, pathways or turf abutting or concealing the edge of a concrete slab will allow for concealed entry by timber pests. Any timber in contact with soil such as form-work, scrap timbers or stumps must be removed from under and around the buildings and any leaks repaired. You should endeavour to ensure such conditions DO NOT occur around your property.

We further advise that you engage a professional pest control firm to provide a termite management program in accord with AS 3660 to minimise the risk of termite attack. There is no way of preventing termite attack. Even AS 3660 advises that *"the provision of a complete termite barrier will impede and discourage termite entry into a building. It cannot prevent termite attack Termites can still bridge or breach barriers but they can be detected more readily during routine inspections."*

### Reasonable Access

Only areas to which reasonable access is available were inspected. The Australian Standard 4349.3 defines reasonable access as "areas where safe, unobstructed access is provided and the minimum clearances specified in the Table below are available or, where these clearances are not available, areas within the consultant's unobstructed line of sight and within arm's length. Reasonable access does not include removing screws and bolts to access covers." Reasonable access does not include the use of destructive or invasive inspection methods. Nor does reasonable access include cutting or making access traps, or moving heavy furniture or stored goods.

Area	Access hole	Crawl space	Height
Roof Interior	450 x 400mm	600 x 600	Accessible from 2.1 step ladder or 3.6 ladder place against wall.
Subfloor	500 x 400	Vertical clearance Timber floor: 400mm to bearer, joist or other obstruction. Concrete floor: 500mm	
Roof exterior			Accessible from a 3.6m ladder

### ***A more invasive physical inspection is available and recommended***

As detailed above, there are many limitations to this visual inspection only. With the permission of the owner of the premises we WILL perform a more invasive physical inspection that involves moving or lifting: insulation, stored items, furniture or foliage during the inspection. We WILL physically touch, tap, test and when necessary force/gouge suspected accessible timbers. We WILL gain access to areas, where physically possible and considered practical and necessary, by way of cutting traps and access holes. This style of report is available by ordering with several days' notice. Inspection time for this style of report will be greater than for a VISUAL INSPECTION. It involves disruption in the case of an occupied property, and some permanent marking is likely. You must arrange for the written permission of the owner who must acknowledge all the above information and confirm that our firm will not be held liable for any damage caused to the property. A price is available on request.

### **Concrete Slab Home**

Homes constructed on concrete slabs pose special problems with respect to termite attack. If the edge of the slab is concealed by concrete paths, patios, pavers, garden beds, lawns, foliage, etc then it is possible for termites to affect concealed entry into the property. They can then cause extensive damage to concealed framing timbers. Even the most experienced inspector may be unable to detect their presence due to concealment by wall linings. Only when the termites attack timbers in the roof void, which may in turn be concealed by insulation, can their presence be detected. Where termite damage is located in the roof it should be expected that concealed framing timbers will be extensively damaged. With a concrete slab home it is imperative that you expose the edge of the slab and ensure that foliage and garden beds do not cover the slab edge. Weep holes must be kept free of obstructions. It is strongly recommended that you have a termite inspection in accordance with AS 3660.2 carried out every 6 to 12 months.

### **Subterranean Termites**

No property is safe from termites! Termites are the cause of the greatest economic losses of timber in service in Australia. Independent data compiled by State Forestry shows 1 in every 5 homes is attacked by termites at some stage in its life. More recent data would indicate that this is now as high as 1 in every 3. Australia's subterranean termite species (white ants) are the most destructive timber pests in the world. In fact it can take "as little as 3 months for a termite colony to severely damage almost all the timber in a home".

### ***How Termites Attack Your Home***

The most destructive species live in large underground nests containing several million timber destroying insects. The problem arises when a nest matures near your home. Your home provides natural shelter and a food source for the termites. The gallery system of a single colony may exploit food sources over as much as one hectare, with individual galleries extending up to 50 metres to enter your home, where there is a smorgasbord of timber to feast upon. Even concrete slabs do not act as a barrier; they can penetrate through cracks in the slab to gain access to your home. They even build mud tubes to gain access to above ground timbers. In rare cases termites may create their nest in the cavity wall of the property without making ground contact. In these cases it may be impossible to determine their presence until extensive timber damage occurs.

## Termite Damage

Once in contact with the timber they excavate it often leaving only a thin veneer on the outside. If left undiscovered the economic species can cause many thousands of dollars damage and cost two to five thousand dollars (or more) to treat. Subterranean Termite Ecology These termites are social insects usually living in underground nests. Nests may be in trees or in rare instances they may be in above ground areas within the property. They tunnel underground to enter the building and then remain hidden within the timber making it very difficult to locate them. Where timbers are concealed, as in most modern homes, it makes it even more difficult to locate their presence. Especially if gardens have been built up around the home and termite barriers are either not in place or poorly maintained. Termites form nests in all sorts of locations and they are usually not visible. There may be more than one nest on a property. The diet of termites in the natural environment is the various hardwood and softwood species growing throughout Australia. These same timbers are used in buildings. Worker termites move out from their underground nest into surrounding areas where they obtain food and return to nurture the other casts of termites within the nest. Termites are extremely sensitive to temperature, humidity and light and hence cannot move over ground like most insects. They travel in mud encrusted tunnels to the source of food. Detection of termites is usually by locating these mud tunnels rising from the ground into the affected structure, this takes an expert eye.

Termite barriers protect a building by forcing termites to show themselves. Termites can build mud tunnels around termite barriers to reach the timber above. The presence of termite tracks or leads does not necessarily mean that termites have entered the timber though. A clear view of walls and piers and easy access to the sub-floor means that detection should be fairly easy. However many styles of construction do not lend themselves to ready detection of termites. The design of some properties is such that they make the detection by a pest inspector difficult, if not impossible. The tapping and probing of walls and internal timbers is an adjunct or additional means of detection of termites but is not as reliable as locating tracks. The use of a moisture meter is a useful aid for determining the presence of termites concealed behind thin wall panels, but it only detects high levels of activity. Older damage that has dried out will not be recorded. It may also provide false readings. Termite tracks may be present in the ceiling space however some roofs of a low pitch and with the presence of sisalation, insulation, air conditioning ductwork and hot water services may prevent a full inspection of the timbers in these areas. Therefore since foolproof and absolute certain detection is not possible the use of protective barriers and regular inspections is a necessary step in protecting timbers from termite attack.

## Borers of Seasoned Timbers

Borers are the larvae of various species of beetles. The adult beetles lay their eggs within the timber. The eggs hatch out into larvae (grubs) which bore through the timber and can cause significant structural damage. The larvae may reside totally concealed within the timber for a period of several years before passing into a dormant pupal stage. Within the pupal case they metamorphose (change) into the adult beetle which cuts a hole in the outer surface of the timber to emerge, mate and lay further eggs to continue the cycle. It is only through the presence of these emergence holes, and the frass formed when the beetles cut the exit holes that their presence can be detected. Where floors are covered by carpets, tiling, or other floor coverings and where no access to the underfloor area is available it is not possible to determine whether borers are present or not. This is particularly the case with the upper floors of a dwelling.

Borers of "green" unseasoned timber may also be present. However these species will naturally die out as the timbers dry out in service. Whilst some emergence holes may occur in a new property it would be unusual for such a borer to cause structural damage, though the exit holes may be unsightly.

### **Anoium borer (furniture beetle) and Queensland pine borer**

These beetles are responsible for instances of flooring collapse, often triggered by a heavy object being placed on the floor (or a person stepping on the affected area!) Pine timbers are favoured by this beetle and, while the sapwood is preferred, the heartwood is also sometimes attacked. Attack by this beetle is usually observed in timbers that have been in service for 10-20 years or more and mostly involves flooring and timber wall paneling. The frass from the flight holes (faeces and chewed wood) is fine and gritty. Wood attacked by these borers is often honeycombed.

### **Lyctus borer (powder post beetle)**

These borers only attack the sapwood of certain susceptible species of hardwood timber. Since it is a requirement that structural timbers contain no more than 25% Lyctus susceptible sapwood these borers are not normally associated with structural damage. Replacement of affected timbers is not recommended and treatment is not approved. Where decorative timbers are affected the emergence holes may be considered unsightly in which case timber replacement is the only option. Powder post beetles mostly attack during the first 6-12 months of service life of timber. As only the sapwood is destroyed, larger dimensional timbers (such as rafters, bearers and joists) in a house are seldom weakened significantly to cause collapse. In small dimensional timbers (such as tiling and ceiling battens) the sapwood may be extensive, and its destruction may result in collapse. Replacement of these timbers is the only option available.

### **Timber Decay Fungi**

The fruiting bodies of wood decay fungi vary in size, shape and colour. The type of fungi encountered by pest controllers usually reside in poorly ventilated subfloors, below wet areas of the home, exterior timbers and in areas that retain water in the soil. The durability and type of timbers are factors along with the temperature and environment. Destruction of affected timbers varies with the symptoms involved. Removal of the moisture source usually alleviates the problem. Fungal decay is attractive to termites and if the problem is not rectified it may well lead to future termite attack.

### **Contact the inspector**

Please feel free to contact the inspector who carried out this inspection. Often it is very difficult to fully explain situations, problems, access difficulties or timber pest activity and/or damage in a manner that is readily understandable by the reader. Should you have any difficulty in understanding anything contained within this report then you should immediately contact the inspector and have the matter explained to you. If you have any questions at all or require any clarification then contact the inspector prior to acting on this report.

**Notice to the Purchaser (ACT only)**

(a) Prior to or on Exchange and prior to the commencement of the 'Cooling-off Period' you were given an inspection Report on the Property you intend purchasing ("the Report"). The Purchaser is advised that this Report reflects the condition of the property existing at the time of the inspection (Inspection Date) and may not reflect the current state. Timber Pests, particularly Termites, may have gained entry to the property since the Inspection Date. Termites can, in a relatively short period, cause significant damage to both structural and non-structural timbers within and around the buildings of the Property. Termites (white ants) may be difficult to detect and much of the damage caused may not be readily visible. If damage exists then it may cost thousands of dollars to repair. It is, therefore, very strongly recommended that you urgently arrange for another inspection and report in accordance with Australian Standard AS4349.3 to be carried out prior to exchange or prior to the expiration of any 'Cooling Off Period' and prior to settlement.

(b) If the Report indicated the presence of Termites, termite damage or recommends any treatments or other inspections and reports you should obtain copies of the treatment proposal, any certificates of treatments carried out, details of all repairs including copies of quotations, invoices and any other reports. It is strongly recommended that you arrange for an inspection and report in accordance with AS 4349.3 to verify that the treatment has been successful and in carried out in accordance with AS 3660.2 and a further building inspection in accordance with AS 4349.1.

(c) If you fail to procure a further inspection and report as recommended in (a) and (b) or fail to obtain copies of the treatment proposal, certificates of treatment carried out, details of all repairs including copies of quotations, invoices and any other reports as recommended in (b) above, then it will be deemed that you have decided not to have a further inspection and report carried out, or to obtain copies of certificates of treatments carried out, details of all repairs including copies of quotations, invoices and any other reports and have relied upon your own enquiries and the Report knowing the possible consequences and that the condition of the property, as stated in the Report, may have changed.

(d) The person carrying out the inspection and the company, partnership or sole trader that employs that person will have no liability to you for any damage or loss you may *suffer* as a result of your entering the contract to purchase the property or in connection with completing the purchase of the property as a result of your failure to heed the advice given in (a) and (b) and the warning contained in (c) above, and may use such failure in defence of any claim that you may later make against any of them.

**NB:** It is a condition of your right to rely upon the report that you transmit by fax, post or otherwise deliver the signed "Notice to the Purchaser (ACT only) to the company, partnership or sole trader at the address detailed on the front of the report not less than four (4) days prior to the date of settlement. If you fail to complete, sign or deliver the Notice then it will be deemed that you did not rely upon the report in respect to your decision as to whether or not to purchase the property. This may seriously affect any rights to future compensation to which you may be entitled.

**Please cross out the statement below that does not apply:**

The report is only an opinion of Act Building Inspection Services and is valid for one hundred and eighty (180) days from the date of inspection as per the Civil Law (Sale of Residential Property) Act. No liability will be accepted or claims considered after the expiration of this period of liability.

1. I/We have read and understood the "Limited Liability to a Purchaser within the Australian Capital Territory only" clause of the report and this *Notice to the Purchaser*. I/We have not arranged for another inspection and report in respect of the property and it is my/our intention to rely upon the findings contained in the report; or
2. I/We have arranged for another inspection of the property and report to be carried out, which I/We will use in conjunction with this Report in deciding whether to proceed with the purchase of the property; or
3. I/We have read and understood the "Limited Liability to a Purchaser within the Australian Capital Territory only" clause of the report and this Notice to the Purchaser. I/We have not arranged for another inspection and report in respect of the property and have relied on my/our own enquiries in respect of the condition of the property as at the date of settlement including any changes in the condition of the property that have taken place since the inspection date stated in the report.
