

# Cable Replacement Instructions: Bretford PowerSync Cart for iPad

These instructions will guide you through replacing from 1 to 30 device connector cables in the following products:

- PowerSync Cart for iPad (30-pin), Model H3635LL/A
- PowerSync Cart for iPad with Retina Display (Lightning), Model HB716LL/A

The Bretford PowerSync Cart for iPad includes 30 Bretford USB to Lightning cables (model HB716LL/A) or Bretford USB to Apple Dock Connector cables (model H3635LL/A). Please follow these instructions to replace the included cables with replacement Bretford USB to Lightning or Bretford USB to Apple Dock Connector cables.

1. Turn off power to the cart.

2. For each cable you wish to replace, remove two dividers - one divider from each side of the slot for that cable.

The dividers will snap up, and slide out the front of the cart.

3. Loosen the thumb screws located on the front of the cable management channel above the shelf.

4. Remove the cables to be replaced by pulling them out of the cable management channel and unwinding from the cleat at the back of the shelf.

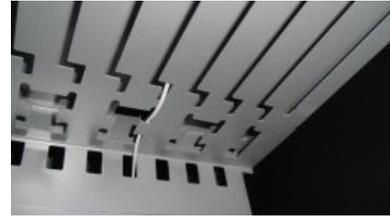

5. Unplug each cable from the USB connector in the back of the cart, and pull the cables through the cable channel and out of the cart.

- 
6. Feed the USB end of each replacement cable through the back of the shelf. Route the cable up into the channel, wrap it around the cleat in the back of the shelf, and loop it through the cable management notch in front.

(In these photos, we have removed all the dividers to better illustrate the process. In general, only remove the dividers on either side of the cable you wish to replace.)

- 
7. Plug the USB end of each replacement cable into the corresponding numbered USB port in the back of the cart.

- 
8. Replace the dividers one at a time by guiding the top into the cable management slot, and sliding it into the cart. Snap down into place.
