

Design Form

Stream/Riverscape:

Designer(s):

Complex:

Reach:

Narrative (describe intent):

Primary Complex Objective:

Secondary Complex Objective:

Structure Type(s) & Count (e.g. 4± 2):

TOTAL: ±

Current Conditions:

Channel Width(s) (ft or m) :

Number of Channels:

Valley Bottom Width (ft or m) :

Percent VB Accessible (as % of VB Width) :

Geomorphic Condition (Stage from p. 11) :

Geomorphic Condition (Poor, Moderate, Good) :

Riparian Condition to Support Wood

Accumulations (Poor, Moderate, Good) :

Beaver Dam Capacity (dams/mi or dams/km) :

Current ; Potential

Anticipated Conditions (post treatment):

Complex Length (ft or m):

Zone of Influence (as % of VB Width) :

Anticipated Responses:

At Base Flow (immediate)

To Typical Floods

To Major Flood

On Back, Sketch a Map of Complex Design. Include:

- Valley Bottom Margin with Existing Channel(s) Position
- Structure Location & Type
- Zone of Influence (in typical floods)
