

ZEBRA'S RUGGED TABLET PLATFORM

Free Up Your Utility Workers to Do More

Give workers a leg up with Zebra's versatile rugged tablets.

Utility work is demanding—and sometimes downright dangerous. Using multiple devices in the field adds extra bulk, increases errors due to device-switching and ultimately slows productivity, while adding unnecessary risk. Streamline workflows and boost connectivity with Zebra's rugged tablet portfolio—capable of withstanding even the most extreme work conditions.

Give your utilities workers what they need most: remote on-the-go reliability.

Upgrade their capabilities: Workers can now input data and capture images on the spot with built-in, high-resolution cameras and stylus-enabled touch screens — reducing overall errors, while enhancing productivity. Increase efficiency with one device that does it all.

Ensure remote reliability: Establish far-away connectivity in even the most challenging conditions with ruggedized internal antennas and remote-optimized 4G LTE, WWAN, Wi-Fi, GPS, NFC, and Bluetooth® connectivity.

Enable round-the-clock work: Provide 10 hours of power with long-lasting built-in batteries, or extend battery life to a full 24 hours with an optional hot swappable battery.*

Streamline with one do-it-all device: With so many accessories and configurations, it's easy to adapt these powerful tablets to each individual's needs—whether they need a carry case, a full-featured keyboard, or a tablet mount for their vehicle.* Plus, further reduce device bulk by streamlining all their workflows to one omni-powerful tablet.

Offer tough-as-nails devices: Zebra's rugged tablets are built to withstand humidity, rain, dust, vibrations, extreme temperatures—even snow and 6-foot drops.* Whether you need a larger screen for outdoors such as the R12 or a built-in hard handle on the XPAD L10, Zebra has the right tablet and configuration for each of your workers.

*Not available for the ET5X Series

Versatile. Rugged. Reliable.
