

Company Information

Mipac specialises in Automation, Control and Digital Solutions by delivering performance for clients across a range of industries worldwide.

We provide end-to-end, customised solutions for infrastructure, systems and technology to support your assets, operations and people, including electrical and instrumentation, networks, control systems, hardware and software. Our experts partner with clients in greenfield and brownfield projects around the world, enhancing productivity, safety and performance.

We specialise in the following industries;

- Mining & Minerals
- Oil & Gas
- Energy
- Water & Wastewater
- Chemicals
- Agriculture

Whether you are looking to redesign and commission your entire process control system, or simply upgrade a single component of your plant, we are here to help you meet your operational and business goals.

With a flexible, collaborative and client-centered approach, we pride ourselves on solving the impossible. As trusted experts in process control and performance data, we produce intelligent, high-quality solutions that are customised to our clients' needs.

Mipac is a recognised provider of DCS, PLC and SCADA services. We are a Solutions Partner for Siemens, a Recognised Certified System Integrator for Rockwell and a Platinum Partner for Schneider Electric.

Mipac's successful project experience has meant that continual process plants with critical control requirements have entrusted Mipac to design and commission upgrades & improvements to the plants. Many of these projects have resulted in Mipac providing continuing 24/7 remote support services.

Products

Cellview

Category: Hardware

Our wireless early short-detection system Cellview offers continuous and accurate monitoring of cell voltage in tankhouse operations. The innovative technology helps optimise efficiency, minimise production losses and realise the full potential of electrorefining and electrowinning processes.

Shortmeter

Category: Hardware

Our ergonomically designed lightweight and easy-to-use device enables quick detection of short circuits and dead plates in electrolytic tankhouse operations. A low cost and low maintenance device, our ShortMeter will help you increase productivity and improve production quality.

Copper Monitor

Category: Hardware

Our revolutionary copper monitor instrumentation creates automation and provides significant process, production and safety improvements to your mineral refinery operation. Our monitors have been installed in refineries globally and are also suitable for other minerals such as nickel and zinc.

Mipac Process Advantage (MPA)

Category: Software

Our cloud-based, data visualisation tool connects you to plant-wide data in real time to help you monitor and enhance your plant performance.

MPA makes data collation, visualisation and reporting quick, easy and reliable, providing the one source of truth for all users, local and remote.

TCard

Category: Software

Our secure, cloud-based operational task management system has been created specifically to meet the needs and complexities of continuous, around-the-clock industrial operations. TCard has been designed to help plan, schedule and manage tasks easily and efficiently, facilitating two-way communication and providing clear visibility of the status of tasks. This innovative solution provides enhanced communication and engagement, greater transparency and increased operational awareness.
