Assembly Tips

The LifeCore 900RB is made from the best materials and has been tested and received a quality control review prior to its packaging to ensure the correct parts and proper fitting of each component. This machine was designed to limit the amount of assembly needed by a customer.

Before assembly of your product, distinguish a proper and appropriate location for the unit where there is easy access to an electrical outlet with a surge protector. Unpack the box in a clear work area to allow smooth assembly. Remove all the parts from the packing material; however, do not discard packing material until assembly is complete. Double check packing materials to make sure no parts were left behind.

Note that some hardware may be preassembled to components to help with assembly and tools have been provided to assist with assembly.
