

HOW SERIOUS IS THE DANGER OF COMMON HOUSE AND GARDEN PLANTS TO THE WELL-BEING OF YOUR DOGS AND CATS?

A recent study indicates that nine-out-of-ten homeowners are unaware of the hundreds of plants, flowers and shrubs, in almost every garden and yard, that can cause serious illness and even death to their dogs and cats.

Yet this problem is well recognized by universities, veterinarians, veterinarian groups and poison control centers throughout North America.

In fact, the problem is so intense that there are more than 11,000 Web sites devoted to toxic plants.

The exotic type of plants are not the problem . . . it's the garden favorites such as amaryllis, asparagus fern, English ivy, honeysuckle and yew that are.

The yew, an ornamental yard plant used extensively around almost every home and business, is extremely poisonous. According to www.vetpurdue.com and the American Veterinary Medical Association, a fifty pound dog needs only to eat about two ounces of the plant to get a potentially fatal dose.

You can protect your loving pets from possible harm by identifying which plants are toxic. Once identified, ensure pet safety by restricting their access to them by using Scent-off "Aroma Pod" Dog and Cat Repellent.

Scent-off is the ideal solution for keeping mischievous cats and dogs out of your beautiful garden and away from outdoor furniture, garbage cans, etc.

INTRODUCING THE 99.9% NATURAL WAY OF PROTECTING YOUR DOGS AND CATS FROM INGESTING POISONOUS PLANTS AND YOUR GARDEN FROM MISCHIEVOUS PETS.

More than forty-five years ago, Ted Johnson, a nurseryman from Kingston, Ontario, Canada, developed a unique product designed to keep mischievous dogs and cats away from gardens and plants. It was crude by today's standards — strands of wire dipped in hot wax containing a dog repellent chemical, but it worked.

He named the product Scent-off . . . because that's exactly what it did . . . its scent sent the dogs and cats off, away from the garden plants. Little did he know then, that his idea would have a very important dual purpose: while designed to keep mischievous dogs and cats from destroying homeowner's garden plants, it also kept poisonous plants from killing their dogs and cats.

Today, Scent-off is made from 8 essential oils from around the world and is produced in modern manufacturing facilities with the end products being far from crude. New Scent-off is encased in unique, plastic "Aroma Pods"¹ that dramatically increase the life of the product by protecting it from nature's elements. Pods come in sealed plastic bags ensuring longer product life. Human hands never touch the active ingredients.

Scent-off is the 99.9% natural way to keep mischievous dogs and cats from destroying your beautiful garden and outdoor furniture and to protect your pets from ingesting potentially dangerous and often fatal toxic plants.

It works!

Scent-off

P.O. Box 530146
St Petersburg, FL 33747-0146

Twist Scent-off Aroma Pods[®] at each end of a 6" stretcher allows the user to slip the unit over a branch or securely twist it onto a plant.

Scent-off Aroma Pod[®] Stakes, with interlocking sections, is perfect for use in front of garden areas or in front of plants with delicate stems.

THE PET OWNER'S GUIDE TO TOXIC PLANTS

A comprehensive pictorial guide to poisonous plants that could cause serious illness or even death to your cats and dogs.

HOW MANY OF THESE POISONOUS PLANTS CAN YOU IDENTIFY? HOW MANY ARE IN YOUR YARD OR GARDEN?

When someone tells you that you have a killer garden, they may not be referring to its extreme beauty. They just might be referring to its plants that are poisonous to dogs and cats.

Unbeknownst to most, almost every yard, garden and home in the United States, Canada and the world are filled with plants, trees, seeds and berries that could make dogs and cats seriously ill and in many cases be fatal.

The purpose of this brochure is not to make people fearful of going outdoors, having a garden or getting them to exist in a concrete covered environment.

The sole purpose of this piece is to make you aware of the fact that poisonous plants exist, help you identify them and introduce you to a simple alternative for keeping pets safely away from them and, at the same time, protect your beautiful surroundings from cats and dogs that are mischievous and destructive.

How many of these poisonous plants can you identify? How many are in your yard or garden? Their names appear, upside-down, on the bottom of this page.
