

PATHWAYS to SUCCESS

We have developed numerous pathways to enhance the quality of life of the residents we serve.

RECOVERY

This pathway focuses on rehabilitation to allow patients to recover to pre-event status. Our program is designed to provide maximum success in flexible, but efficient time frames.

INDEPENDENCE

This pathway focuses on the components of function that comprise the patient's ability to perform personal self-care tasks and mobility with the least amount of assistance and with optimal safety.

SAFETY

This pathway focuses on the ability to live and function safely, whether in a community or a private residence through a personalized plan centered around mobility, balance, eating, and communication.

QUALITY

This pathway focuses on improving quality of life while reducing the risk of re-hospitalization for complicated cases or patients with multiple co-morbidities through the use of evidence-based practice recommendations.

ENGAGEMENT

This pathway utilizes a holistic, partnered approach to memory care to provide a comprehensive, interdisciplinary treatment of persons with cognitive deficits to improve their quality of life and daily activities performance.
