

GEMINI ENTERPRISE:

Integrated Turnkey Analytics and Automated Data Infrastructure

Gemini Enterprise provides a robust, data infrastructure empowering the enterprise to deliver business value on existing big data investments. Gemini Enterprise delivers data analysis across multiple data platforms and supports on cloud or on-premises deployment options. By connecting data across enterprise silos, Gemini enables DataOps teams to provide valuable analytics for business stakeholders.

Gemini Enterprise Provides:

- Cross-platform, turnkey analytics for IT Operations, Security and Compliance
- Multiple data platform support to integrate data pipelines across Splunk, Elk/Elastic and Cloudera
- Multi-Cloud optimized including Gemini Private Cloud with auto scale out and security
- Flat Rate Pricing
- Bring Your Own Data Platform License

IT Operations: An integrated solution enabling DataOps teams to provide business value with turnkey analytics

Gemini for IT Ops incorporates various sources of IT data to provide deep and actionable analytics as a service for DataOps teams to cut through the noise and to react to critical events. Gemini-enabled IT Ops signals a move away from siloed operations management and provides intelligent insights across infrastructure application performance, machine or event data of a variety of sources.

Security Operations: Security analytics at scale with post-forensics investigation analysis across platforms

At the convergence of IT and Security data, Gemini for Security Operations provides actionable insights for SOC analysts and incident response teams. Gemini security experts prepare, integrate and map your data from any source relevant to security analysis and remediation, including network activity, end-point detection, threat intelligence, and IAM sources. And because its built on Gemini's automated data infrastructure, it seamlessly scales in performance and reduction of management complexity.

Compliance: Automated data collection, continuous risk assessment and painless audit reporting

Gemini for Compliance addresses challenging and time-consuming audit and compliance requirements with an out-of-the-box, comprehensive analytic offering. Combining a highly scalable data collection platform, intelligent analysis tools and prebuilt dashboards and alerts, Gemini provides real-time details on exposure to industry requirements across different sectors including financial, health care, public sector and data privacy and security. Gemini Care expertise can also help develop custom reports, dashboards or new data integrations to support internal security or policy demands.

Cross-Platform Management:

With a single view of deployments and unified administration, attain NoOps deployment and management across diverse data platforms and multi-cloud platforms. Gemini provides a direct connection and consistent administration for cluster-level management and monitoring. Gemini's intuitive interface provides simple cluster lifecycle management with wizards to spin up, scale, terminate, and even clone clusters as needed.

The Perfect Hybrid Solution:

Seamlessly extend your on-prem and public cloud resources by using Gemini Cloud as the base for your hybrid environment. A consistent interface minimizes disruption and retraining as data assets and applications are relocated from deployment model to another. Also, secure low-latency private networking as well as public networking options mean that performance is never sacrificed. And with No Lock in, you have options. Utilize a variety of data platforms and easily break down data silos and configure the best data architecture for your needs.

Designed to Scale Out:

Gemini scales out with your data journey, meeting the demand as compute requirements increase. Designed to support heavy workloads, resources can be easily allocated to support different compute- intensive, IO intensive or retention-focused applications. Site-to-site VPN connections ensure secure remote access. Extensive security monitoring provides intrusion alerts, botnet prevention and end- point firewall security, while monthly security reports and vulnerability updates keep you informed and reassured.

Gemini Care:

Eliminate the need for cloud-ops, linux experts, or platform-specific consultants. Gemini is backed by a world class team of experts that have launched and managed hundreds of data platform deployments. With a tailored analytics offering that reduces time to value for any data platform and 24/7 infrastructure monitoring, incident response, remediation, and dashboard support, we're here to make it easy so you can focus on results.

Gemini Portal:

Content, Community and Care—a singular online experience that brings it all together. Benefit from a library of content related to product features, technical notes and business use cases. Monitor service delivery and operating state. Schedule time with Gemini Care experts and track upcoming scheduled tasks.

Gemini provides autonomous data infrastructure to analyze, virtualize and converge all enterprise data silos. Gemini scales AI-driven analysis across diverse data sources and data platforms to unleash business value across IT Operations and business stakeholders. Gemini is led by experts from AppDynamics, Cisco, and Splunk, dedicated to helping global customers simplify the data chaos.
