1.6 Connectivity

1.6.1 USB-UART (v16) (8)

Also known as an FTDI, this USB to UART converter allows a USB connection to the board to behave as a virtual RS232 serial connection. It offers direct and complete access to the system from a development machine by way of the FTDI FT232RQ USB – UART IC.

Technical documentation for the FT232RQ is available at:

http://www.ftdichip.com/Support/Documents/DataSheets/ICs/DS_FT232R.pdf

1.6.2 UART Mux (2 output) (v6) (13)

A bidirectional 2 x SPDT switch connects two UART interfaces (RX/TX only). A SELECT line is used to control which UART is output.

This UART 2-output mux switches between UART on LoRa Transceiver (1) or UART on USB-UART (8) to UART on Atmel ATmega32U4 (3).

The output is controlled by PF1 on Atmel ATmega32U4 (3).
