

PENDRAGON ERRATA & CLARIFICATIONS

Latest update: 06-Mar-2018

RULEBOOK

1.4.1 Optional replacement (Clarification):

- when a Command, Feat or Event text specifies that the executing faction has a choice as to the number of pieces it can replace (example: Entreat which says "up to"), then if the executing Faction does not wish to replace the maximum allowed number (typically when no Available piece left and no wish to remove from the map), then the excess targeted pieces are not removed. (Example: "Entreat" allows the Scotti player to replace up to 2 Militia by Scotti Warbands; if for any reason the Scotti player replaces none or only 1 Militia, then every other Militia unit(s) in the targeted Region remain on the map).

1.5.1 Spare Factions:

- With two players, the player playing the Dux and Civitates may only achieve a victory check (6.3) if the Briton faction not holding Dominance (6.8) beats the thresholds adjusted for Dominance as outlined in 7.3:
 - o Dux to surpass 85 at Roman Rule + Civilian Dominance, 70 at Autonomy + Civilian Dominance;
 - o Civitates to surpass 38 at Roman Rule + Military Dominance, 31 at Autonomy + Military Dominance.

1.7.2 and 3.6.5 (3rd bullet) Plundering a captured City (Clarification):

- when a City is successfully captured but the number of surviving assailants is not enough to carry off the City's Prosperity as Plunder (i.e. <4 of Londinium, and <2 for Eboracum), the City is still fully deprived of Prosperity and the excess Plunder is lost (removed off-map).

1.8 Dux Resources (Clarification):

- Dux (red) Resources are the sole property of the Dux faction. No other faction may spend these but him (though the Scotti may Ransom away some). The Dux, as long as Army Preemption is in effect, can freely mix Briton and Dux Resources when paying for any cost (unless explicitly prohibited by the action or event text).
- Before Fragmentation, the only options to accrue Dux Resources are 1/ Requisition, 2/ Events (for instance, Imperial Subsidies) and 3/ Transfer of Wealth from the Civitates (1.5.2, Tribute). If the Dux passes before Fragmentation, he adds Briton (blue) Resources, not Dux Resources (see the Important Note in 2.3.3).
- After Fragmentation, the Dux accrues Resources doing Epoch Rounds (Revenue Phase) or by passing (he can still Requisition, or benefit from Events or Tribute).

3.2.1 Train (p.7) (Clarification):

- The Dux does only needs to pay 3 Resources in a Train space if he is placing Cavalry and/or Militia; he may pay no Resources for placing Troops and only pay 2 Resources to add Prosperity cubes in up to 2 spaces, which means it is legal to select Train without paying any Resources if no Troop is placed and Prosperity is added in 0 spaces. Such an "empty Train" and still counts as a Command, would allow to add an associated Feat (Build, Invite or Requisition). Note however that a Feat cannot be "empty".

3.2.2 and 3.3.2 March (p.8):

- The 7th sentence should read: "Pay 2 Resources per origin space." (i.e. the cost must be paid even if no Marching group is formed and moves out)

3.3.1 Muster (p.8) (Clarification):

- the beginning of the 2nd bullet should read: "If Friendly pieces outnumber enemy pieces (including Raiders), ..."

4.4.2 Surprise (p.15):

- the 3rd bullet should read: "In the Deep Raid Region, either the Dux or a Faction with Control (1.6) — the Dux has the first option — may force a Battle (3.6), with them as the Defenders and the Deep Raiding Faction as the Attackers, before the Raiders Plunder the Region. If the Dux or Faction with Control forced a Battle, the Saxons may not further Battle as part of the Raid on this Region. If, as part of such a forced Battle, the Saxons successfully Evade, they may not take Plunder." (The intention of this clause is to prevent multiple Battles during the same Raid, not to prevent Deep Raiders from assaulting).

4.4.3 Ravage (p.16), Procedure (Clarification):

- In the last sentence of the Procedure, "those Battles" refer to any Battle fought by Saxons in a Ravage space, whether initiated by them or by another Faction. (In essence, if Ravaging, Saxon units are spread out in the countryside and cannot avoid battle).

4.5.3 Ransom (p.16), 3rd sentence (Clarification):

- the condition for Ransom to occur is that at least 1 Raider arrived in the target area AFTER assessing the impact of patrols (sea patrols if coming from a Patrolled sea, Wall patrols if coming from Caledonia) and Events (some Momentum events impose a negative DRM on Raider rolls) but BEFORE any Raider might be lost to Battle.

Note that this must be a new Raider, not a unit (Raider or Warband) that would have been already present in the target area (effectively, every Raid during its resolution is considered entirely independent from whatever presence the Raiding faction may already be having in the target area, never combining with any such units, even in Battle).

6.3 Victory Phase:

- In the second sentence, the reference after "...immediate Recovery Phase" should be to 6.7 rather than 6.8.

7.1 Ranking Wins and Breaking Ties:

- This section should read: "Whenever any Non-player Faction (1.5, 8.0) passes a victory check (7.2), all players lose equally. Otherwise, whenever any player does so, he wins. Should more than one player do so during the same Epoch Round, the highest victory margin (7.3) among the winners comes in 1st place, 2nd-highest comes in 2nd place, and so on. Ties go to any Non-players, then the Civitates, then the Dux, then the Saxons.

NOTE: if at least one Faction passes a victory check, no Faction that doesn't may win, no matter what their victory margin per 7.3 may be."

7.3 Barbarian Victory Margins (Clarification):

- Barbarian Renown-based Victory Margins factor in a bonus/malus of 5 Renown per Settlement on the map over/under their requirement of 4, i.e. five times their number of Settlements on the map (remember this includes both Foederati and non-Foederati Settlements) minus 20 (four times 5).

- The Saxons, before Fragmentation, enjoy the luxury of having two Victory Conditions (Control >10, which always applies, and Renown >30 and 4 Settlements on the map), so they can consider the highest margin of the two: Saxon Control -10 on the one hand, and Saxon Renown -30 modified by 5x their number of Settlements on the map -20 on the other.
- The Scotti, who have only one Victory Condition, always consider Scotti Renown -45 modified by 5x their number of Settlements on the map -20.
- For example, let us say that we are under Autonomy and the Saxons control spaces totalling 5 Pop, have 5 Settlements on the map (3 non-Foederati and 2 Foederati) and have accumulated 18 Renown. Their victory margin would be the highest of $10 - 5 = 5$ and $18 - 30 + 5 \times 5 - 20 = -7$, i.e. -5. In the meantime, if the Scotti have accumulated 36 Renown, and have 3 Settlements (1 Foederati, 1 non-Foederati and 1 on the Dal Riada Event Card), their victory margin would be $36 - 45 + 3 \times 5 - 20 = -14$.

8.6.7 (p.29), 3rd line:

- remove "...or Ravaging..." (Scotti cannot Ravage)

Setup (2.1) (p.37), Deck Preparation (Clarification):

- the Epoch cards should be shuffled among the bottom 4 cards of every 12-card pile *with the cards already face down*; besides hiding the card sequence, the intent is to guarantee that at least 8 non-Epoch cards will be revealed in each Epoch before an Epoch card appears. It is also important to stack the piles with Early Epoch cards *on top of* those with Late Epoch cards (again, with cards already face down), in order to ensure that Early Epoch cards will all come up *before* Late Epoch cards.

Barbarian Conspiracy (p.37):

- Victory: the reference in the first sentence should be to sections 6.3 (rather than 6.2) and 6.6.

Petty Tyrants Setup (p.39-40):

- There should be 1x Prosperity in Icenii, not 2x
- There remain 5 Saxon Settlements in the Saxons Available box, not 4 (only 7 Saxon Settlements are on the map)

The Harder They Fall Setup (p.40), Deck, paragraph below the "Optional" grey box:

- The 2nd sentence should read: "Randomly shuffle one of the two remaining Early Epoch cards among the bottom 4 cards of the first (top) 12-card pile."

PLAYBOOK

Multiplayer Example of Play, Part One – Setup, Deck Preparation (page 3):

- The next to last sentence of the first paragraph at the top of right hand column should read: "Set the remaining Event and Epoch cards aside."

Multiplayer Example of Play, Part Two, Card 5 (page 11):

- Last paragraph (Saxons executing shaded Event): the Cavalry units removed by the shaded Event go to the Dux Available box, not the Casualties box (see text of the Event).

Multiplayer Example of Play, Part Two, Card 7 (page 11):

- First bullet (Scotti raid in Votadini): only six (not seven) Raiders are killed assaulting Traprain Law, so one Plunder from the Stronghold gets awarded to the third survivor.
- Third bullet (Scotti raid in Ordovices): same thing, only six Raiders are killed assaulting the Hillfort, leaving 4 surviving Raiders (3 of them carrying Plunder: 1 from the Region and 2 from the destroyed Stronghold).

Multiplayer Example of Play, Part Two, Card 9 (page 13):

- Seventh paragraph (toward the bottom of the left column, Saxon raid in Atrebatas): the total of the 3D4 as provided should equal 9, not 8, leaving 7 Raiders to land; this has no impact on the example though.

Multiplayer Example of Play, Part Three, Upkeep (p.15):

- Dux Fourth bullet: owing to the mistake done with Card 5 play, there are only 3 Cavalry in the Casualties box, not 6 (the other 3 being in the Available box) – All end up in the Available box at this step anyway.
- Saxons: there are 14 (rather than 13) Saxon Raiders on the map, who all return anyway.
- Scotti First bullet: Since one more Plunder-carrying Scotti Raider survived the Raid in Votadini (Card 7, page 11), a total of six (not five) Plunder is Returned to Scotti Renown, bringing it up to 20 (not 19). Also, there is a total of 7 (not 5) Scotti Raiders on the map, who all return.

Note: the various illustrations of the state of the board during the Example of Play reflect the same errors as are in the text.

Event Notes, Card #37 Bryneich (page 49):

- The second sentence of the Tips should read: “When the shaded Event is played, ...” (rather than “unshaded”).

Spaces List (page 72):

- The fourth Fens Region should be Corieltauvi, not Catuvellauni.

PLAYER AIDS

Faction Foldouts:

- Dux Build: Location should read “Spaces with Cavalry and more Friendly than enemy pieces (including Raiders).”
- Civitates Muster: the second part of the Procedure should read: “or – if valid Site with more Friendly than enemy pieces (including Raiders) – (...)”
- Saxons and Scotti Surprise: the rule reference for Coup de Main should be 3.6.4, not 3.6.6

DECK

Card #43 “Omens” (Clarification):

- This Event may only be used to modify the faction eligibility order on a regular Event Card (Events #1 to #72), never on a Pivotal Event or Epoch Event. Should an Event card with its faction eligibility order modified by the play of Omens be trumped by a Pivotal Event, it retains its modified eligibility order as it gets postponed.

Card #45 “Thanet”, Shaded Event (Clarification):

- When Settling in two spaces, a given Raider may only provide a roll for 1 Settle space, even if in a space adjacent to both Settle spaces (best to place the eligible Returning Raiders in the Settle space they will roll for).

Card #68 "Niall Noigiallach", Unshaded Event text:

- The number somehow fell through the cracks... the text should read: "Reduce Scotti Raids by -1 Raider each space (after Patrol)."
