

hubbub biometric screenings: help employees know their numbers

Want your employees to get the most out of hubbub? Biometric screenings are an affordable, easy way to give your staff relevant information about their health and well-being. And hubbub is here to turn those health insights into action.

Partnering with a top national vendor, our biometric screenings allow your team to schedule their screenings with a click of a button from their hubbub profile. The onsite check-in process is streamlined with the use of tablets. Employees' data (displayed privately to them only) is then uploaded automatically in a place they visit every day—their hubbub hub! And you can see the aggregate results right away.

Services All services include: lipid panel, glucose, blood pressure and body mass index	Price (per employee)
Onsite full screen* (we'll schedule an event at your facility)	\$55

what you need to know

For accurate results, employees should fast for 9-12 hours prior to their screening. A lipid panel measures total cholesterol, including "good" cholesterol (HDL) and "bad" cholesterol (LDL).

* participation levels

Please allow at least 60 days lead time for onsite screenings. At each location, there needs to be 30 or more participating employees. If participation falls below 80% of the forecast, each no-show is billed at 50% of the contracted rate. If participation falls below the site minimum of 30, each no-show will be billed at 100% of the contracted rate. The expected participation amounts can be changed up to 2 weeks prior to the onsite screening without incurring a penalty. Travel fees may apply.
